Chester Whites, the Billiken Brand.—Your duty is to raise more hogs and increase the meat supply. The demand for pork exceeds the production. Get started with some of these Chesters; 3 bred sows farrowed in April, 1916, due to farrow in September, and October; 18 October gilts bred to farrow in October; 3 October boars ready for service. All first class in every respect and good enough to fit and show at the different Fairs this fall. All are cholera immune and will be registered free. Write for price list and booklet. C. B. Cunningham, Box C, Mills, California.

Grape-Wild Farm Berkshires — World's Fair Grand Champion Grand Leader 2nd heads our herd, not only himself a champion but the sire of champions. At the 1916 California state fair his daughters won all of the senior sow classes including the grand champion sow. At the 1916 Oregon state fair a Grand Leader sow was junior champion. We are offering a number of choice boars of exceptional breeding and are also booking orders for fall pigs. A. B. Humphrey, Escalon, San Joaquin Co., Cal.

Large Yorkshires — Choice spring boars, gilts and weaned pigs from champion sow P.P.I.E. or from breeding of champion boar and sow Sacramento, 1916. If you see them grow you will like them. Riverina Farms, Paradise Road, Modesto, Cal.

Superba, World's Grand Champion Poland-China boar and one of the greatest sires of the breed. Spring boars ready for service, also few sows bred to this noted sire, reasonably cheap. Rough's Greenfields, Arlington Sta., Riverside, Cal.

Wanted—Farmers, orchardists, livestockmen to use classified liner advertisements like this. Thousands of people read every ad and the cost is only 3 cents per word per issue, minimum 35 cents. Extra lines of white space above and below cost only 16 cents per line.

Poland-Chinas—A number of magnificent young boars for sale, just ready for service. Don't overlook my offering of splendid sows at the Poland-China sale on October 17 at Hanford. Will Bernstein, Hanford, California.

Rancho Rubio Durocs.—Nothing to sell at present. A fine bunch of gilts and a few extra good service boars for this fall. Elmer Lamb, Ceres, Cal.

Big Type Durocs. Well grown out February and March pigs of either sex in any quantity. We ship only the tops and butcher the culls. F. M. Johnson, Napa, Cal.

Cholera Immune Duroc-Jerseys. Big type. Weaned boars and gilts from 500 to 700-pound sows. Prize winning stock. Derryfield Farm, I.O.O.F. Temple, Sacramento.

Most Money in Duroc-Jerseys. Bred sows and weanlings, either sex all the time. Delta Farm and Live Stock Co., Colton, Cal.

Duroc Jersey—The breed's largest and easiest feeders are Golden Models. Peters, Lamson & Walker, Devore, San Bernardino County, Cal.

Large Yorkshires—The ideal hog for the progressive farmer. Service boars and fall pigs, both sexes, for sale. A. L. Tubbs Co., Calistoga, Cal.

Large Type Poland Chinas are prolific and profitable. Can furnish boars any age at reasonable price. J. A. Crawshaw, Hanford, Calif.

Large Type Poland-Chinas—Very best stock. Prices reasonable. Weanlings my specialty. C. R. Hanna, Riverside, Cal.

Model Herd Berkshires bred for size and quality. Weanlings and gilts. J. L. Gish, Laws, Calif.

Carruthers' Farm Berkshire Hogs. Our herd won Premier Exhibitor prize at the P. P. I. E. Exposition, Mayfield, Cal.

For Sale Poland-Chinas—Big type choice bred gilts from registered stock. G. E. Shefford, Healdsburg, Cal.

Poland-Chinas — A few good breeding boars. S. F. Williams, Orland, Cal.

MISCELLANEOUS

Veramont Stock Farm Pure Bred Herefords. Location Plumas County. Ideal for stamina and vigor. Bulls for sale. Address H. M. Barngrover, San Jose, Cal.

Registered Holstein Bulls from high producing dams for sale at reasonable prices. Also a few choice females. McAlister Sons, Chino, Cal.

Thirty high-grade Holstein Cows and one registered Holstein bull. Chas. Hubbard, Riverdale, Calif.

Young Holstein Bulls, bred right, grown right, priced right. Creamcup Herd. M. Holdridge, Modesto, Calif.

N. H. Locke Co., Lockeford, Cal.—Choice young Jersey bulls for sale. Holstein Bulls from record cows. Prices right. A. M. Bibens, Modesto, Calif.

MACHINERY

WHY BUY NEW? SAVE HALF Material guaranteed. It's second hand after used few times, but not worn out. Key engine snaps: new 1 1/2 h. Olds, cost \$75, for \$38; 6 Stearns, \$89; 4 h. p. nearly new Stearns, \$85; 3 Stover, \$15.

NEW USED WOOD GALV. TANKS All sizes, used heavy 1500 gal. galv. with metal covers, cost new \$75, for \$28; 2000 extra heavy nearly new galv., \$55; 100 gal. galv., \$7.50; 10,000 redwood, \$75. Pine, heavy 10,000 galvanized, \$135; 16,000 corrugated galv., \$250. Galv. 4x4x4 tank, \$15. SWELDEST, LARGEST tank in city, 100,000 gal. 3-inch redwood with round lug hoops, cost \$1200, our price \$400.

WINDMILLS, SPECIALLY PRICED 8, 10, 12, 16-ft. sizes. Pump as much water as new ones, at half price; costs nothing for fuel; 12-ft. aermotor and swell steel tower, \$88; 16-ft. aermotor and tower, \$135. Many other snaps.

PUMPS, CYLINDERS, PIPE 2 1/2-in. two-runner hor. centrifugal pump, \$50; 2-in. rotary, \$22; 5-in. two-stage Byron Jackson hor. cent. pump, \$150; 8-in. hor. cent. \$150, pumps 200 in. water. 7 vert. cent. Krough, deep well double-acting No. 2 Ames, \$145. Large Bulldozer jacks, \$68. Plunger pumps, \$2 up. 5x6 air compressor, \$29. 90 ft. 7-in. irrigating pipe, 32c. All kinds brass pump cylinders, rods, big pipe fittings of every description.

RANCH MACHINERY Walking plows \$2.75 up; harrows and cultivators, \$2.50 up 4 and 5-ft. Fresno, \$9 to \$12; wheel barrows, \$2.50 up; 350 ft. 3/4-in. cable, 6c; water troughs, \$4; bone grinder, \$6.50; feed mill; sprayer; mowers, buck rake, \$20; belting, all sizes; sundries too numerous to advertise. Material guaranteed as represented or money refunded. Down town office DEMMITT CO., UPSTAIRS 120 N. Main. Yards, 816 Yale, Los Angeles, Phone 15191; Bdwy. 1984.

Gasoline Engines, the largest stock of used gas engines in California from 2 h. p. to 100. Thoroughly overhauled. Machinery Exchange, 733 North Spring St., Los Angeles.

Several new and slightly used engines at a bargain. Best makes 1 to 35 h.p. Arnott & Company, Wholesale Machinery and Implements, 112 South Los Angeles St., Los Angeles, Cal.

For Sale—Yuba Tractor No. 12 in A-1 condition. Plow and cultivator if wanted. Satisfactory reason given for selling. P. O. Box 306, Colton.

AGRICULTURAL IMPLEMENTS

Large Assortment slightly used and agents' sample plows, harrows, cultivators, wagons, Cal and see them before buying. Save 50 per cent on some Four floors. Largest stock. Arnott & Company Ranchers' Supply House, 112 to 118 South Los Angeles St., Los Angeles.

Bean Threshers Attention—The best and cheapest source of power for small threshing outfit is a Little Bull Tractor. Will haul your outfit anywhere and give ample power at the belt at very low cost. Several of these tractors have been used for this purpose two seasons with great success. Terms if desired. Low prices. See P. J. Weisel & Co., Anaheim, Cal.

RABBITS

Raise Rabbits For Us—We sell you foundation stock and buy back what you raise, paying \$1.75 and \$2.00 each for them. Send 25c for our proposition, our book on rabbit culture and our supply catalog. Gilmore's Rabbit Farm, Dept. C, Santa Barbara, Cal. (The rabbit farm of international reputation.)

HORTICULTURAL PRINTING

Catalogues — Good Printing. Specialists in preparing nursery, seed, poultry and live stock catalogues and all kinds of commercial printing. For prices and information address WOLFER PRINTING Co., 424 Wall St., Los Angeles.

PATENT ATTORNEYS

Patents that protect are secured through The PACIFIC COAST PATENT AGENCY, INC., Savings & Loan Building, Stockton, California; send for our little booklet on "PATENTS."

PIGEONS

For Sale—CARNEAUX, mostly red pigeons. 54 pairs, pure stock, fine. Chas. F. Mulford, 190 West 7th St., Pomona, Cal.

PRICES FOR 1917 WHEAT

Continued from Page 195

able profit to farmers on the average, and an incentive to make it worth while for wheat growers to produce wheat in such quantities as may be needed by the United States and our Allies.

The fair price commission desires a frank statement as to his actual costs from every farmer who produces wheat. The method of preparing this statement will be announced and given general publicity within a short time.

How Food Administration Will Operate

The food administration will then buy this wheat and resell it to American users and to the Allies. The food administration will regulate the margin of profits throughout the chain of distribution within this nation, so as to protect the interests of all essential factors concerned.

The food administration will immediately license all grain elevators and storage houses that come within the provisions of the act. In this way the government will protect the interests of the American people against any unusual break in prices.

Protection for 1918

The act constituting the food control specifically provides a minimum price for farmers of two dollars per bushel on number one northern spring wheat, or its equivalent, as the basis of sales at the principal interior primary markets, subject to such rules and regulations as may be laid down by the President.

Consequently, American farmers need have no fear that there will be any unexpected heavy slump in prices for the years 1917-18. They may, therefore, in all confidence plant increased wheat acreages in accordance with the recommendations recently made for each district by the United States department of agriculture.

PONY TRACTOR

The Pony Tractor is announced. It is an auto attachment for Ford or other models, selling for the remarkably low price of \$100. This will enable car owners to greatly increase their farm power at small expense and to save expense of feeding horses, as the Pony auto tractor does the work of four horses with two-horse implements. Demonstrations have been given almost daily in Los Angeles with plow, harrow, cultivator and other implements and the results have been highly successful.

In making the Pony Mr. C. L. Meecham, the inventor, found that additional weight was not necessary for traction, hence light small rear wheels were used. Another big outstanding feature of the Pony lies in the fact that one person can operate the auto and the implement, and this while riding in comfort in the driver's seat. Young boys and girls capable of driving a car, or a man too old for vigorous farm work, can operate the Pony just as well as an able bodied man.

An item of only \$100 for transforming pleasure power into valuable working power is worthy of careful attention. The quick change from auto to tractor requiring only five minutes is one of the accomplished features of this Pony Auto Tractor

## The Cultivator Patterns

8068—Ladies' Shirt-Waist. Cut in sizes 36 to 42 inches bust measure. Linen, madras or crepe de Chine can be used for this pretty waist.

8328—Children's Suspender Dress. Cut in sizes 4 to 12 years. The guimpe closes at the front and the skirt is cut in one piece.

### THE PARADE

I watch the regiments swinging by  
In a shimmer of polished steel,  
With guns that glisten, and flags that fly,  
And bronzed young faces, and heads held high,  
And the glint of the bayonet finds reply  
In the answering flash of the soldier's eye  
As the endless chains unreel.

I hear the throb of the big bass drum;  
'Tis the heart of the army beats  
In its loud tattoo, and my pulses thrum,  
And the swelling veins in my temples hum,  
And my sight grows dim, and my lips are dumb,  
As I stand on tiptoe to see it come  
Through the crowded and cheering streets.

I see the regiments tramping by  
To the lit of a martial air,  
Clean young fellows, alert and spry,  
Ready and eager to do and die  
For humanity under an alien sky,  
And a proud old woman this day am I,  
For my son is marching there!  
—Minna Irving in New York Sun.

### WOODROW WILSON PRESIDENT?

Written for California Cultivator  
By Florence Gamble, Amsterdam

**D**URING the fall of 1913 when the presidential campaign was at its height my father, who is an ardent Democrat, did some electioneering for his candidate, Champ Clark. Whenever opportunity arose I would argue with him and try to induce him to vote for my favorite, Woodrow Wilson. In November Wilson was elected and then his inaugural took place in March. I was very proud to think the man I had been boosting was elected; so when on the eleventh of April a thoroughbred black horse colt was born I named him Woodrow Wilson.

Woodrow is now four years old and a very pretty and well mannered horse. He was given to me as a present when very young and is now my riding horse. As I live on a large ranch there is a great deal of riding to do and my sister and I do it all.

Near our barn is a large pasture about two miles long. In order to let my horse have the benefit of the growing feed I often turn him in here. When I wish to ride him I go out and call "Wood-row" as loud as I can, and no matter if he is grazing or not, as soon as he hears my call he starts to me on the run. After I saddle and bridle him I let him follow me to the yard gate and there he waits while I prepare for my ride.

When I wish to mount I say, "Kneel Woodrow, kneel," and he does so and I get on. As for driving cattle there is no horse that can beat him, and he can hold a steer much larger than himself.

Besides being a good riding horse he is very well mannered and will, when introduced to some one, either bow or shake hands and answer all questions which are answerable by the nod or shake of the head.

I have told his good qualities, and now I am going to confess. He has his faults. He can open all the gates and doors on the ranch so is often a great nuisance. One morning my father went to the cellar and there at the bin stood Woodrow calmly eating sweet potatoes. To get into the cellar he had to push open the door and go down seven steps.

Another time when I went to get him I couldn't find him. I called and he whinnied from the granary. I went

over and, sure enough, there he was, eating grain from a sack. He had tried to back out and then closed the door and was trapped. Luckily he had not been in long so suffered no ill effects from his greediness.

Although he is a nuisance in some ways I am sure we could hardly run the ranch without him and I know that money could not buy him.

### THE PUSSY-CAT PARTY

Written for California Cultivator  
By Mary Ohmsted Lotspeich

**D**ICK—who was Dick? Why, he lived in the big house of the mayor of the town, the one with the vines trained from the telegraph poles in front of the house, clear up to the front door.

He was the pet cat of the daughter of the house, Nellie, and though she was a "grown-up," not a little girl, she made a party for Dick, and I was there. This is a true story, if it did happen years ago when there were pink roses in my cheeks instead of the yellow ones which are there now.

It was on a Saturday afternoon and Dick, the great, splendid tiger-cat, looked fine, with a bright cherry-colored ribbon tied around his neck.

The first one who came was pretty little Mrs. Nancy Kent, carrying a fancy basket, all trimmed up, and in it were her two plump white kittens, Jimmie Blaine and Jimmie Garfield, one with a pink, the other a blue ribbon on its neck. They were what the boys and girls of today would call a "dandy pair."

For a few minutes the doorbell kept ringing and ladies came bringing their kittycats, decked out in new ribbons or shiny bells that jingled as they walked. They all looked as though soap and water had not been spared, and they must have been well rubbed and brushed to make their furry coats look as bright and shiny as silk. Even cats look better when they are clean and shiny!

Some of the cats were black, some Maltese, some spotted, some striped, but for me Dick was king of the feast, for there was was a feast, really. Not ice cream and cake, but what was just as dear to their cat hearts—or I'd better say, stomachs. There was nice sweet milk in some of the saucers, and in others big pieces of liver. As I told you, I liked Dick, but I was ashamed of him when he would growl and strike at some of his guests if they left their dishes and came to his. I am sorry to have to tell this, but as it is a true story I must tell it as it really happened. There were spoons and strings for the kitties to play with, and their mistresses would have them show off with their best "stunts," jumping over their hands and doing other cunning things.

I must not forget to tell you about "Tricksy," Helen Gardner's pet cat, with glossy black fur and great golden balls for eyes. It frisked around in such a lively fashion that the blue ribbon bow twisted clear around under one ear, but it didn't care for that while it was having such a good time. I think I'll have to call Tricksy the heroine and Dick the hero of the party, and others thought so too, for the prize of the afternoon, a pretty, shiny bell, was fastened to the blue neck-ribbon, which seemed to make both Helen and Tricksy very proud and happy. When it was time to go home the kitties did not say "thank

you for a pleasant afternoon," as polite children do, but they purred contentedly and arched their proud backs and showed by all their actions that they were as glad as I to be at a real, "sure enough" cat party.

### BUSTER

Written for California Cultivator  
By Jennie E. Brancher

**F**OR six years we've had a little, black dog of whom we are very fond. He was only a little fellow when we got him, about a year old. Buster is his name. He is a small black dog with a few white chin whiskers. He is fat, just roly-poly fat.

He is ever ready to sit on his haunches and shake hands with any company we have. And yet he is always ready to give a warning bark when he hears a strange step.

We are never bothered by having the chickens hanging around the doorstep, for when we see a chicken all we have to do is to say, "Sic 'em, Buster," and away the chickens go running and flying for their lives.

One time papa went hunting and took Buster along with him. But at the first report of the gun, away went Buster as fast as he could hike it. We did not see Buster for several days. But one evening we children were at the stairway, ready to go to bed, when something came pitter-patter through the doorway, and to be sure there was our beloved Buster. We were sure somebody had tied him, because he had a rope around his neck. Always after that when papa would take the gun out Buster wasn't around.

JOHN L. THOMPSON SONS & CO.  
150 River St., Troy, N. Y.

The other day the boys found a tunnel under the wood pile and called Buster, for they thought some wild animal had dug it for a nest. But the wild animal proved to be our Buster. After we had investigated further we found he had a den in there, and at the end of the long tunnel it branched off, one branch going east and the other one west. It was large enough for him to turn around in.

Buster never snaps at us children, and he will stand a lot of teasing without getting cross. He will let baby pull his ears till he cries and he will not snap.

I don't know what we will do when Buster dies, but we are hoping that he won't die for a long time.

POODLE

Written for California Cultivator  
By Mrs. Olive Glasgow, Nipomo

**O**UR pet is a dog, a pit bull, christened John L. Sullivan, but nicknamed Poodle, and we think he is very smart. He rides a horse bareback or with a saddle. He knows everything we say to him. He tries his best to talk, opens his mouth and makes the queerest noises. He is very fond of our horses and will travel under the pole just between the horses for hours at a time.

He is a fine dog to hunt ducks with. He will go in the water as often as we shoot. My husband hunted with him for two winters in the Imperial valley along the canals and New River. He can send him anywhere by just motioning with his hand. Poodle would go in the smaller ditches when the farmers were irrigating and catch a humpback sucker, a fish that runs out in the small ditches from the main canals.

I can send Poodle a half mile out in the fields with a bucket of water or anything else that I want to send to my husband. I just give it to him and say "Take this to Daddy," and away he goes; or I say to him, "Bring Daddy in for dinner" and he goes after him and jumps and barks around him till he bends down, then Poodle takes his hat and brings it to me. He won't come back without it. He knows several tricks. He will lie down and roll over, will bring a washpan and sit down alongside of it and put both front feet in it when we tell him to wash his hands, will gape whenever told to "gape big." When I spell h-a-t my husband sits down and Poodle will go and take his hat off his head and bring it to me. Then I say "Go back and pull Daddy's hair." My! how he loves to do that. He is very rough about it sometimes. When we tell him to "dig like a Dago" he stands up on his hind legs and then comes down with both front feet, tries to dig with both feet at the same time. He will carry wood to the house. We have a kitten that we got before it was weaned, so it adopted Poodle for its mother and the neighbors are amazed to see a cat nursing a bulldog. But he likes best of all to hunt wild hogs. We hunted them in Humboldt County. He caught a large one up there three years ago. My! how he enjoyed that, and we did too.

WARLIKE

A little girl was a regular attendant at the Billy Sunday revival meetings and heard often that popular song, "Brighten the Corner Where You Are," but evidently failed to get the words correctly, for one day she was heard singing, "Fight in the Corner Where You Are."

A FARM PET

Written for California Cultivator  
By Georgie Palla, Linne

**B**ABY is an orphan. Her mother died when she was about two hours old. We all felt sad. Baby's mother was a family pet.

Baby was very cute and pretty, a sorrel color. She walked about the yard trying to find her mother. We concluded to try to raise her on cow's milk. This she liked and was always hungry. But it was too rich and did not agree with her. After a few days she got rheumatism and we had to help her up. We reduced her feed to half milk, half water and a lump of sugar. This was better but not entirely satisfactory, so we made tea from green alfalfa and gave her a feed of this in her milk once a day. She had learned to drink from the pail, but she did not like the tea, so we coaxed her to drink it by giving her the tips of our fingers. Always after this when Baby had her tea, or anything she did not know, she wanted the tips of our fingers to help her.

She thrived now and grew healthy and strong. Next she learned to eat rolled oats, then a little hay cut in it.

Baby considered me her mother. She would follow me around the pasture like a dog, and whinny when I went away from her. If she got frightened she would run behind me. She will eat apples, prunes, and is very fond of sugar and candy. She will be standing as if she was asleep and if I say "Baby, do you like sugar" she arouses and begins to lick her mouth with her tongue. She comes any time I call her.

She has learned to run with the other horses now. She has turned from a sorrel colt to an iron grey and looks very much like her mother. She was named after her mother but she will always be Baby, I guess. She is past two years now and will be ready for work next spring, and looks as if she would be a fine big work horse.

BIOGRAPHY OF A DOG

Written for California Cultivator  
By Riverside Subscriber

**H**IS coming to us was not considered of sufficient importance to have the date recorded on the family record.

Suffice it to say he had been left by the family to whom he had been given while they spent a vacation at the beach. The little fellow, not yet three months old, started out to find a home for himself. He found a boy especially fond of animals and wagged his tail as if to say "Don't you want me?" and he immediately won his way to the heart of the boy and then to the hearts of the whole family.

He was not a pure-bred, but seemed to be a cross between an English coach and a spitz, having hair something like the spitz and great numbers of black spots on his white body. He had a beautifully marked face and head and, contrary to generally accepted theories, he inherited the best qualities of each breed.

He was remarkably playful, a quality that stayed until mature life. He was also an excellent watch dog, always giving notice of the approach of undesirable people, and had to be told to keep quiet or he would make them uncomfortable; while nice people, especially ladies and children, would be very welcome. Sometimes he was almost too profuse in his attention. He ran races with the boys, they riding bicycles. He would play with

oranges, catch them in his mouth, bring one from under the trees when he wished to play. If the oranges were broken he would eat them.

Any new arrival on the farm, like a new calf, or even chickens, had to be introduced to him. He would bark furiously at them until this was done, when he would give them a few laps with his tongue in token of friendliness.

He always found the evening paper and delivered it at the door, no matter how dark the night. When sorrow came into the home he sorrowed too, went about with drooping head and very quiet.

CORN DRIED IN THE OVEN

Written for California Cultivator  
By Helen White

**U**SE sweet corn that is in prime condition. Cut off the tops of the rows, and then with the knife scrape off all of the corn that is good. Where grains are long, two slicings

may be made to advantage before the scraping is done. Place in shallow pans or plates and put into moderately heated oven to scald. As the corn dries, stir it often, and turn the flame lower to prevent scorching.

When the corn has passed the "sticky" stage it will have assumed a golden brown color, and is then ready to be placed in cloth sacks and laid in the sun to finish drying. It may then be stored away in tin cans or fruit jars—any container which may be tightly covered. Cracked jars unfit for fruit canning may be used for this purpose.

Sweet corn dried in this manner retains all of its flavor and does not require the length of time, or the fight with the flies that the old method of sun drying had for the housewife.

When it comes to escaping the unwelcome attentions of the tax collector and assessor, the car owner has about the same chance a sick oyster on crutches would have to kick a hole in a superdreadnaught. — American Motorist.

Snap-Shots from Home.

Give cheer to the boys in camp and on shipboard by sending them pictures from home. There are likely to be some tedious, homesick days and a little cheer-up in the way of photographs of the home folks and the home doings will do them a lot of good.

And some day when you want to give something a little more substantial, send along a Vest Pocket KODAK and ask your Soldier or Sailor Boy to send pictures to you.

Vest Pocket Autographic Kodak, \$6.00

All Dealers'.

# The Farm Woman's Hens

Written for California Cultivator By Jean A. Koethen

LOT of good advice is handed to the farm woman these days. She must economize; she must conserve; she is told how to prepare a meal out of nothing in particular and how to dress her children stylishly in garments made out of odds and ends. Far be it from me to add to this perfect avalanche of advice. I have always aspired and am still aspiring to be a farm woman, because I know no city woman, tied to an unceasing round of shallow social duties and stupid pleasures has any such opportunity for usefulness or self development. To make two blades of grass grow where one grew before, or an apple tree bloom where a jimson weed had thought it was fixed till the end of time is not a small matter, and it is one that is growing steadily bigger.

The farm woman has enough to do, in all conscience, why should she bother with hens? Well, for one reason, she always did and always will. We speak glibly of the poultry producer as "he" but "she" would be nearer the truth. I know so many women who are partners with their husbands in the poultry business, so many who are breeders themselves on a large or small scale, and so very, very many who "keep hens" just for the love of it, that I have begun to wonder if poultry keeping isn't essentially a woman's business. Certainly it thrives best as a side line, and where can fowls be as profitably kept "on the side" as on a farm?

Because I have not the skill to wind gently into my subject at this point and show how inevitable it is that the farm woman, who conserves everything else on the farm, should be the conservator of fine poultry as well, I am going to jump right into the middle of it with the declaration that poultry on the farm isn't kept as it should be, that it isn't made as profitable as it ought to be, and that it is up to the farm woman, the wife of the farmer or his daughter or both, to make it what it ought to be.

We must face the situation: the outlook for poultry specialists, those who give their whole time to poultry work, is not encouraging. No use pretending it is. The longer we pretend the slower we shall be in getting anywhere at all. As Dr. Woods says, poultrymen the country over are just hanging on by their back teeth. How can it be otherwise with wheat, corn, milo, kafir, and who knows what else costing \$4 and up a hundred? What can a poultryman who is obliged to buy his grain do but hang on by his teeth or his toenails?

The farmer doesn't have to pay \$4 a hundred for his grain. He can raise it, if he has land enough, and

his wife can feed it to her hens and put the price of the eggs in her pocket.

I believe we shall see here in California the next few years a revival of general farming. Horticulturists, dairymen, poultrymen and all the rest are learning that it doesn't pay to put all your eggs in one basket. One year the oranges fail. The next year it is the walnuts. Again the potato crop is poor or an early frost kills the garden truck. I can't remember that I ever heard of the alfalfa crop failing. That is one reason why livestock and poultry are such a safe investment on the farm. Some alfalfa fed to cows, some more fed to hens and turkeys, a "family" orchard—not too much of any one kind of fruit—, grain for the stock, vegetables for the family, such a farm insures a living no matter what particular crop is having its bad year.

Three specific charges may, I think, be made against the ordinary farm flock as it is seen almost anywhere, east and west; poor stock; poor housing; indifferent care. The farm woman, if she turns her mind to it, can easily and quickly remedy all three and make the hen yard the most profitable part of the farm.

The farm woman's hens are most often of no particular breed. The flock consists of a few Reds hatched from eggs procured from one neighbor, a few Leghorns from eggs from another neighbor, an Orpington or so, several Minorcas and a mixture of cross breeds. As more chicks are hatched or new breeds added, the male birds are allowed to run with the general flock, breeding more new and curious mongrels. In a couple of years the stock, whatever it was in the beginning, has gone to pieces, and there isn't a decent fowl of any kind to be seen. When good, pure-bred stock is as cheap as it is, and shows at which one may come in touch with breeders are held in every town of any size, there is no excuse for not having pure bred stock of some one breed. Pure bred stock lays more eggs and bigger ones; the young stock grows faster and makes better table poultry. In fact, there is nothing whatever, from any standpoint to be said for mongrels. Good stock judiciously mated improves from year to year. Poor stock grows steadily worse. One good male bird, such as can be bought for \$5, not exhibition stock but a good utility bird, mated to half a dozen two year old hens of uniform size and color, makes a good foundation for a successful farm flock. Never mind about number. Begin with six hens and increase as fast as you can add good birds and give them proper care, no faster. The breed doesn't matter. All breeds are good if they are well cared for and well mated.

The housing of farm hens need not be as bad as it too often is. The old fashioned chicken house was built for the sole purpose of keeping the chickens in and marauders out. If the

fowls had sufficient air it was by no fault of the builder. We know now that chickens need air and sunshine and lots of it. The simplest shed which admits these two essentials is better than the most elaborate house without them.

The style of house used depends entirely on the purse of the owner. For most of the year a simple shed coop, three feet high in front, sloping to two at the back, five feet long and three feet deep, is ample house room for from 12 to 15 hens. Such a coop can be built of 1x2 and covered with either shakes or tar paper. It is a good plan to cover the roof and back alike, leaving the ends open in summer and covering them when necessary with burlap. Such a house in a shady yard is sufficient protection from May to October, perhaps longer, but during the rainy season the birds need a real house, not large but with sufficient room for scratching litter, and with open front so that the air may always be fresh. If the house fronts south or east it will itself be protection from the north wind, and a curtain or overhanging roof keeps out the infrequent rain. Any one who wishes to build an up-to-date hen house need only visit the nearest breeder and he will get ideas galore.

Such a coop as that described above is especially suitable for the farm because it is portable and can be moved from orchard to cornfield or garden or the edge of the alfalfa field as desired. It may be accompanied by a portable run of chicken wire and light posts so that the hens can always be confined if necessary.

If there is one thing the farm woman needs more than another it is to study up and learn the underlying principles of the care and feeding of poultry; learn to know the causes and symptoms of disease; the reasons for a balanced ration and how to balance it; most important of all, learn to cull and breed intelligently. The country is flooded with poultry literature. There are books at all prices, bulletins to be had for nothing or a few cents; poultry correspondence courses. Our own state university is trying very hard by means of bulletins, the correspondence course, and the special short courses at Davis in the fall to increase all kinds of agricultural knowledge among farmers. The poultryman has only to ask for information and it is poured out for her. This does not take the place of study or of practice, but the three together, cemented by an earnest desire to make the poultry yard a real asset to the farm, will sooner or later make an expert out of the veriest novice.

## AFTER THE CHASE

"You naughty boy! You've torn your clothes again. Why did you try to crawl through the barb wire fence?"

"Well, you see, Mr. Smith's big dog kind of acted like he wanted me to."  
—Pittsburgh Press.

### The Best Feed on the Market

Has the highest protein at the lowest price, \$2.90 per 30-lb. bag, subject to market changes; see that your hens eat as much Dry Mash as they do grain; feed them lightly of grain in the morning and make them work for it; either have a scratching pen or spade up a part of the ground and rake the feed under; keep "A-1" Dry Mash in a dry form before them all day; about one hour before feeding them their grain in the evening WET their Mash and let them eat all they will; put it on top of the Dry Mash, then feed them all the grain they will eat; this stuffing process will give them a full crop to carry them through the long night of inactivity; analysis is printed on every bag; give it a trial. At Your Dealers or

The Globe Mills, Los Angeles

## Science Says Buttermilk

Bulletin 162, just issued by the Department of Agriculture, states that Buttermilk is the only preventative of White Diarrhoea. It has been proven that many birds apparently in perfect health have these germs in their system and that they are transmittable to their progeny. Science has discovered that the Lactic Acid Bacilli of Buttermilk kills these poison germs. Write to Berkeley for this important bulletin, free.

The Dry Buttermilk in GLOBE A-1 BUTTERMILK MASH contains 10,000 live Lactic Acid Bacteria to the cubic centimeter.

Globe A-1 Buttermilk Mash is a high protein feed, free from any filler.

Globe A-1 Buttermilk Mash will prevent bowel troubles, keep your flock in glowing health, produce more eggs to market, better eggs to hatch.

Costs no more than non-buttermilk mash.

Satisfaction or Money Back.

Mendocino, 1917, 32@32½.

**HAY**

Under date of August 25, Scott, Magner  
& Miller say:  
Receipts past week 3353 tons, last week  
2800 tons, the preceding week 3152 tons.  
Receipts have been readily absorbed from  
day to day with the result that the trade  
as well as the large consumers have not  
been able to accumulate any great  
amount of stock in warehouses. The  
crop in the country has changed hands  
at higher prices than ever known before  
in the trade. This in itself would indi-  
cate higher prices as soon as hay has  
been removed from the fields and is  
drawn from the warehouses. At the  
same time, the winter will have a great  
deal to do with this condition, for if  
there is an open winter with plenty of  
grass a very small quantity of hay will  
answer all requirements in the cities.  
Almost all receipts are from No. 1 to  
choice in quality this year. Stock hay is  
extremely scarce and selling out of pro-  
portion to other grades. Alfalfa is firm-  
ly held with a good demand.

We quote today wholesale prices in  
carload lots as appear from dealers'  
transfers upon the market. For prices  
to consumers charges of cartage, com-  
mission and handling expenses must be  
added.

Citrus Fruit Market

Los Angeles, Aug. 29, 1917.

The cool weather has cut down demand  
in all Eastern markets for both lemons  
and Valencias. Lemons, however, have  
been picking up, especially in the Boston  
market, but prices are nowhere near the  
high level of the recent hot spell. Ship-  
ments have been cut down to correspond  
to light demand so that if another hot  
wave strikes the East prices will prob-  
ably soar again. Some growers who have  
been going through their Navel orchards  
carefully report that more fruit is show-  
ing up, especially inside the trees where it  
was protected from excessive heat.

**Shipments**

Shipments of oranges from Southern  
California since November 1, 1916, 36,970  
cars; lemons, 7304; total, 44,274. To same  
date last season: Oranges, 29,050; lemons,  
6328; total, 35,378.

From Central California to date this  
season: Oranges, 5044; lemons, 164; total,  
5208. To same date last season: Oranges,  
5398; lemons, 146; total, 5544.

From Northern California to date this  
season: Oranges, 845 cars; to same date  
last season: Oranges, 610; lemons, 1.

**FROM THE AUCTIONS**

August 22  
New York: Val., \$2.10@3.70; lemons,  
\$4.30@5.35.  
Cleveland: Four cars, Val., \$2.10@4.00;

# SPERRY SURELAY

## for EGGS

### for the Incubator or Market

Nature provides each laying hen with just so many eggs in embryo.

If it is left to the hen she will take about six years to produce her quota of eggs, and her feed and keep will eat up all the profits. But why leave it to the hen?

## Feed Sperry Surelay

and make her produce her full supply of eggs in two years. You save four years care and feeding, and still have a marketable fowl.

SPERRY SURELAY is a profit maker for the poultryman anyway you look at it. Besides making hens lay it keeps them in perfect condition. It contains just the right amount of protein, just the right amount of fat, just the right amount of ash, just the right amount of fibre. In short, SURELAY is a perfect balanced ration—a ration you can depend upon to produce results every time.

Your dealer sells SURELAY, in the Yellow Striped Sack, and each sack is guaranteed to be just like every other sack.

It's easy to keep an accurate monthly account of your poultry business—the number of eggs your hens lay, the cost of feeding them, etc., and to know that you are making a profit—with our 1918 Surelay Egg Record Calendar. Send for this useful and serviceable calendar by enclosing 10c. with your name and address on the egg crate.

## PIPE, TANKS AND SILOS

### Pipe

For Irrigation---Water Supply---  
Power---Drainage. Costs less than  
any other pipe of equal capacity,  
efficiency and endurance. Not af-  
fected by worms, gophers or roots, acid or  
alkaline soils.

### Tanks

For water, wine, vinegar, oil,  
acids, solutions. In all sizes--  
500 gals. to 500,000 gals.  
Cheaper and longer lived than metal tanks.

### Silos

For dairymen, stockmen, feeders. The  
most profitable addition to any farm equip-  
ment. Sizes 25 tons to 300 tons.

All Remco Products are manufactured to your order entirely from clear, air-dried Redwood, selected from our stock of fifty million feet. They are correctly designed out of our thirty years' experience, and built by skilled mechanics in our completely equipped electrically driven factory. Their outstanding features are highest grade materials—mechanical perfection—superior efficiency and maximum durability.

Catalogs and prices of any of them sent upon request.

One Dollar Yearly

## California State Fairs

Guy D. Loomis Writes for Cultivator Readers of the History of Former State Fairs, the First of Which was Held in San Francisco in 1854. Since '59 They Have Been Held in Sacramento. Some Features of this Year's Fair Which Promises to be the Greatest Ever.

CALIFORNIA'S 1917 state fair, opening at Sacramento September 8 and closing September 15, is a complete epitome of California's agricultural, horticultural, livestock and industrial resources. It is the most massive display of California's wealth possible in a limited area, a state show in every sense of the word. It is a visual portrayal of the immense strides of the past and an accurate guide to the great accomplishments of the future. And because of these things it is a vital factor in the continued prosperity of the state's population.

California state fairs is due, more than to any other influence, its position for the commanding position which California has attained among the cultural and stock raising states, to the 1917 California state fair, presenting as it does the cumulative result of 63 years of striving, will be much of the advance sure to be in the future. Hundreds of new things, adding incalculably to the state's resources, will be worked out and put into operation as a direct result of the education diffused at this year's fair. Hundreds of farmers and workmen will gain inspiration and knowledge of vast benefit to themselves and to the country at large through observing the wonderful accomplishments of others.

The first California state fair was held in San Francisco October 4 to 12, only four years after the admission of the state to the Union. The general departments of agricultural products and animal husbandry were established at that time, but the areas now both are located on the same grounds and the one is coordinated with the other, then the agricultural products were exhibited in the old Music Hall in San Francisco, and the livestock show was held on the Pioneer race course. Probably, however, this was due to lack of available space, rather than failure to recognize the close relationship existing between the two.

Because of the relative insignificance of the state's agricultural resources in 1854 as against its mining interests, the first fair was a puny affair if taken in comparison with the enterprise of the present day. It was of far reaching importance, this, that it marked the beginning of a policy of state aid and encouragement of California's agricultural industry, a policy which has never wavered through the many changes of administration; and that it pointed the way to a ready means of greatly stimulating competition, thereby increasing production.

With the single exception of 1915, when the fair was omitted because of the Panama-Pacific International Exposition at San Francisco, each year has witnessed a state fair greater and more truly state wide charac-

FIRST PHOTO OF THIS YEAR'S FAIR

HERE is a novelty, a photograph of one of the buildings on the fair grounds taken 500 miles from the grounds. This building, which occupies a prominent place on the fair grounds this year, was constructed in sections in the city of Los Angeles, set up there inside of the state exposition building at exposition park, filled with its exhibits just as they appear in Sacramento, and photographed by the Cultivator camera. The building may be constructed without the driving of a single nail. Bolts and pins only are needed. Electric fixtures are all installed and at the different section joints plugs are located so as to make complete connection almost automatic. The building covers only about 750 square feet but the ingenious arrangement of shelving, niches and tables makes a large exhibit possible, as may be noted in the photo. The side doors swing out from the top and leave exposed many of the exhibits from the outside of the building. The doors as they swing out and up form a shade or protection over all of the exhibits.

One feature not yet in place when the Cultivator photo was taken is the striped canvas roof. This is in place as now erected on the fair grounds. The erection required two hours time by two men and but a short time longer for the installation of the attractive exhibits. The exhibits are from practically all counties of California and are made up from the permanent exhibit now maintained in the city of Los Angeles.

This ingeniously constructed building is the work of F. B. Davison, manager of the permanent exposition and grounds in Los Angeles. Mr. Davison's life has been spent in exposition work, and this little building which he has invented, and which others have suggested should be patented, will be studied by fair and exposition people who are now gathered at Sacramento.

than that of the preceding year. From every angle, attendance, number of exhibits and exhibitors, value of premiums, variety of features and extent of influence upon the agricultural advance of the state, the growth has never stopped.

Since 1859 all of the state fairs have been held at Sacramento, the four previous ones beside the first one at San Francisco being located at Sacramento in 1855, San Jose in 1856, Stockton in 1857 and Marysville in 1858. In the early days, in fact up to 1907, the fairs were located on various sites of limited ground space bought or leased by the state. Ten years ago this order of affairs was done away with and the state purchased the present spacious grounds of approximately 100 acres.

Various permanent buildings have been erected from time to time, and it has now become the settled policy of the state to add to these improvements as rapidly as the growth of the fair institution and available funds permit. The sweeping character of this policy is indicated by the fact that the last legislature appropriated \$300,000 for construction of a fire-

proof horticulture building to replace the one destroyed by last year's fire.

The increase in attendance has corresponded with the general growth of the fair. Where hundreds saw the sights of the earlier fairs, thousands now attend. Sixty thousand persons went through the gates last year in a single day. This year the biggest day is expected to bring 100,000. And so it is with all else in connection with the fair. Exhibitors and the 20 departments of exhibits fill the pages of an increasingly bulky catalogue; premiums to be awarded this year total \$44,521 as against \$4660 at the first fair, and educational and recreative features entirely apart from the exhibits for premiums are now provided in almost endless variety. Where the early fairs rose little above the dignity of a country fair, the 1917 fair is not only of state but of national importance.

Food conservation and increased food production, the biggest issues in the world when a whole world is at war, will be handled at this year's fair by the United States government. Food experts, paid by the federal government and controlled by government officials, will explain and demonstrate every phase of this movement. While the fair has made both issues its chief purpose and in further-

ance of that purpose will use every resource at its command to drive it home, the government will go into the movement to an extent hardly possible by a state organization.

But while the fair's chief purpose is educational and a mighty impulse toward stronger financial, commercial and industrial conditions, it affords recreative features of unparalleled magnitude as compared with previous fairs. Probably 25 per cent of those attending a state fair come principally for the amusement and general good time, although even these cannot go away without having absorbed a certain amount of good along educational lines which later may easily prove of lasting benefit to themselves and to the community. But even the other 75 per cent, the serious minded ones, the ones who come to learn and profit, require the relaxation gained from wholesome and attractive forms of recreation. And it is therefore to the entire 100 per cent of the attendance that the fair presents its program of entertainment.

Aviation will be featured. Four professional aviators of country wide reputation and a dozen or more aviation students of advanced classes will participate in the aviation program. A cross-country aeroplane race will be held on one day, sham battles between aviators and 200 American blue-jackets on two or three other days and exhibition flying every day. Bomb dropping contest, aerial relay and pursuit races, landing contests and balloon breaking are among the many exhibition stunts programmed.

Horse racing—both running and harness—a prominent feature of California state fairs since 1873, this year is more attractive than ever. Prizes aggregating \$27,000 are offered in the sulky events alone. Approximately 200 trotting, pacing and running horses are now stabled on the grounds and are being worked out daily in preparation for the fair meet. Two harness races—three heats to the race—and three running races are carded daily affording the most ardent track follower abundant opportunity to see the stars of the game in action every day of the fair.

A head-on collision between two locomotives, running at a speed of 45 or 50 miles an hour, the big spectacular feature of last year's fair, will be staged again this year for the last time.

On Sunday, September 9, from 40 to 60 bands, most of them of 35 or 40 pieces, will compete in the annual band contest for prizes totaling \$3000. Most of the best bands in California will take part, the list being greatly increased this year through the entry of 30 to 40 Native Sons' bands, a marine band of 40 pieces, several school bands and an Indian band from the Sherman Indian School at Riverside, besides a dozen or more bands of first rating which were in last year's contest.

A hippodrome show with chariot races, standing Roman races, bucking horses and bulls and other features, will be still another great out-of-door free attraction.

An elaborate entertainment will be given by the Native Sons on the fair grounds, to which the order with true California hospitality will bid the world.

All of these big amusement features are in addition to dancing, a "49 Show," and a hundred and one Midway attractions, claimed by the advance men to be the best ever. If anyone lacks for amusement and entertainment at the state fair this year it won't be the management's fault.

# Tractor Tests

Conducted at Fremont, Neb.

July 26 to August 2, 1917, by the Agricultural Engineering Department of the University of Nebraska

Prof. L. W. Chase in Charge

A series of interesting tractor tests have just been made. Every farmer may now know facts.

The object of the experiments was to determine under actual farm conditions the amount of fuel required and the rate of doing various field operations, and to study the quality of the work done. Also the effect of different depths of plowing in the same field.

The tests were not of a competitive nature, but were made with the object in view of observing tractors in actual farm work so that all farmers might have actual figures.

The tests were made with Case tractors operating standard farm equipment, under the auspices of the Department of Agricultural Engineering of the University of Nebraska, directed by Prof. L. W. Chase, assisted by Prof. O. W. Sjogren, Mr. Louis Runnels and Mr. Ray W. Carpenter.

## For Free Distribution

A bulletin has just been published covering twelve tests. This is the first authoritative statement of its kind.

It shows the equipment used, the kind of fields, the different operations. Of chief interest to all farmers is the fuel consumption and cost per acre. Much of this information has hitherto been speculative. Now it is down in black and white. It shows the advantages of Case tractors.

## Some of the Data

Each test is complete. Different size tractors are used. Some tests are for plowing at different depths. Some are for spike-tooth harrowing and disking, drilling, etc.

Kerosene was used, and based on a cost of 8½ cents per gallon, the cost per acre for plowing under different conditions and depths is shown. These are exact figures—not estimates. The temperature was 100 degrees in the shade—but the heat, however, had no effect on the operation of the tractors in any way.

## Send for Your Copy

This bulletin created a sensation at the Fremont Tractor Demonstration. All farmers have been waiting for conclusive figures. Case, the leader for 76 years in power farming, now sets a new pace. No farmer should fail to get this bulletin.

Copies are free. Merely send us your name and address, asking for "The Tractor Tests Bulletin," and a copy will be forwarded at once—without charge. The first edition is just off the press. So don't delay—write today.

# THE ORIGINAL 2-WHEEL TRACTOR That Does All Farm Work WITHOUT HORSES

WHEN you begin to consider the purchase of a tractor, whether  
for a farm of 80 acres or more, there are a number of questions you will need  
to ask yourself before you buy. Here are some of them:

—Will it CULTIVATE as well as plow? Will it do ALL my farm work without horses? Will it work  
on plowed ground without packing the soil? Will it do the work quicker, easier, and save on hired  
help? Is it really a ONE-MAN tractor? Will it handle as easily as a team of horses, rather than  
be too heavy, clumsy and inconvenient? Do I ride on the tool where I can see the work I am doing,  
or will I have to have someone run the tractor while I am operating the farm implement?

Here is the tractor that answers these and all other farm power problems of the  
average farm most practically and profitably. A tractor that is heavy enough to do  
all farm work that horses will do, yet light enough to be handy and work on plowed  
ground without packing your soil.

DISCING

DRILLING

CULTIVATING

(16) HARVESTING

**MOLINE** ORIGINAL 2 WHEEL

## UNIVERSAL TRACTOR

This is the original Two-Wheel Farm Tractor. It  
pulls two 14-in. plows; will disc, harrow, plant, CUL-  
TIVATE all hill and row crops, pull mower, binder,  
manure spreader, fill your silo—and do all belt work on the  
average farm. In fact, it will do anything you can do with  
horses; do it quicker, easier, and with less hired help. It  
weighs only 2800 lbs., but all its weight being on its two wheels  
—all its weight is traction weight. The tool you hitch it to  
forms the rear wheels and you do not have to pull around a  
ton of needless weight. It will back up with tools attached  
easier than a team will back. You can turn around in a small  
space; get close to the rows and the fences.

Write for Catalog Folder and read how farmers everywhere  
are solving the power and hired help problems on their farms.

**MOLINE PLOW CO.** Dept. 49

Corn Binders, Grain Binders, Grain Drills, Harrows, Hay Loaders,  
Hay Rakes, Lime Spreaders, Mowers, Manure Spreaders, Plows,  
(Chilled and Steel), Scales, Seeders, Stalk Cut-  
ters, Farm Trucks, Vehicles, Wagons.

Also STEPHENS SIX  
Automobiles

PLOWING

## The Titan Tractor Record

A TITAN tractor is a safe machine to buy.  
The present models have been at work  
steadily on average American farms for more than  
two years. Their standing is established.

Ninety-six per cent of Titan owners say they are perfectly  
satisfied with the amount and quality of work the machines  
do, and with their fuel economy.

Every Titan tractor operates successfully on kerosene.  
You can always get a plentiful supply of kerosene or dis-  
tillate, at a reasonable price.

There are two sizes—10-20 and 15-30 H. P. The 10-20  
size is the one recommended for average farms. It is a three-  
plow outfit with two plowing speeds, 1.85 and 2.50 miles per  
hour, turning from 7 to 10 acres a day. You can use it for  
all kinds of belt work up to 20-H. P. and for hauling.

Both sizes give the same steady, reliable service. Both  
operate successfully on kerosene. They reduce labor costs.  
By getting the work done in the right way and at the right  
time, they increase yields.

A Titan tractor is a safe, profitable machine to buy.

To have a Titan tractor delivered in time for the harvest  
and the fall plowing, your order should be placed soon.  
Write us for catalogs.

## FEDERAL TIRES

DOUBLE CABLE BASE

This is the tire for our car hereafter.

See that strong gripping tread. It wears remarkably well and acts the same as the strips on the wheel of a tractor.

Another good thing about Federal Tires is their stay-on security. They can't leave the rim even on the roughest and toughest roads. Yet they slip off easily when necessary.

Built into the base of each Federal Tire are four strong steel cables which anchor the tire securely to the rim against the hardest service strains. It is an added strength and safety feature found only in Federal Tires.

Made in white Rugged and black Traffik non-skid treads. For sale by leading dealers.

**The Federal Rubber Company**  
of Illinois  
Factories, Cudahy, Wis.

Manufacturers of Automobile Tires, Tubes and Sundries; Motorcycle, Bicycle and Carriage Tires; Rubber Heels, Fibre Soles, Horse Shoe Pads, Rubber Matting and Mechanical Rubber Goods.

22 Mechanic Street - Davis, Cal.

Manufacturers of Sure Pop Almond Huller and Separator, 3 sizes; McGarvin Fruit and Olive Graders, any size; Schandoney & Harrington Equalizing Hitches, any size; Diamond Special Harrows, Baker Clips, Clevises; Martin Farm Ditcher and Road Grader, and Schmeiser Portable Automatic Hay Derricks.

## Sour Orange Seedlings

We have about 20,000 fine one year old excess stock that we will not need for our planting. Plant now and act quickly if you want these. Also 10,000 two year olds.

**McMILLAN-GRAFFEN NURSERIES**

PUENTE, CALIFORNIA

Extra parts are always available without delay for standard advertised machinery. This class always found in the California Cultivator.

## Green Manure Crops

Written for California Cultivator By R. S. Vaile, Riverside

THE most important orchard operation for consideration at this time of year is the planting of a green manure crop. There are numerous values to be expected from such a practice; namely; first, the prevention of soil washing; second, the holding of certain available fertilizers now in the surface of the ground which might otherwise be leached deeply with the winter rains; third, the addition of certain amounts of nitrogen from the air by the bacteria working on the plant roots; fourth, the incorporation next spring of a considerable amount of organic material which will serve to improve the physical condition of the soil.

A well grown leguminous crop contains at the time of inverting in the spring enough nitrogen in its tops to be equivalent to about 300 pounds of dried blood per acre. Part of this nitrogen is gathered from the air and part of it from the surface soil. It is safe to say that under conditions of clean cultivation during the winter practically none of this nitrogen would be available for tree feeding the next spring. With the covercrop, however, it may be inverted into the tree root zone just at the time when

not be undertaken unless there is ample labor assured for the harvesting of the crop. A pea such as the Telephone or the Yorkshire Her should be very nearly as good from the standpoint of green manure as anything that might be grown, and where market conditions and labor conditions are right, considerable profit may be realized from this side line.

In a general way each of these crops should be planted alone, without any sort of a nurse crop, unless perhaps in the case of a very young orchard where it is desired to get a crop of leguminous hay which may be harvested. In such cases a small amount, (five to eight pounds) of barley may be planted with the legume crop.

The time to plant is just at hand. Usually the irrigations in citrus groves come at intervals of about 30 days. In a general way that irrigation falling between September 15 and October 15 is the most desirable time for planting the green manure crop. The amount of seed to use to the solid acre of ground is given as follows: Melilotus indica, 20 pounds; vetch, 50 pounds; horse beans, 15 pounds; peas, 50 pounds. The amount

Melilotus indica

An annual and a winter grower. Taken in May

most needed, and experience has demonstrated that it becomes available as plant food within a very short time after plowing down. At the present time with the excessively high cost of fertilizing material and the increasing need of economy along all lines it would seem particularly desirable to use this method of obtaining nitrogen.

Among the crops which may be suggested for use, listed in their probable order of importance, are Melilotus indica, common vetch, horse beans, and Canadian field peas. For the past two seasons Melilotus has been very generally used on all types of soil and has given better satisfaction in the main than any other crop, over as wide a range of conditions. On the other hand, there are certain of our very light soils where it is difficult to obtain a stand with so small seeded a crop. There are also places where the Melilotus does not develop rapidly enough to permit the turning under of a satisfactory crop early enough in the spring to make this a desirable plant to use. Then again, for the present season, there is apt to be a slight shortage in Melilotus seed, due in a large measure to the excessively dry weather late last spring. Common vetch is, of course, an old standby and there appears to be a large supply of very good seed on the market. This crop has in the past been very seriously injured by aphids and has never been as generally satisfactory as Melilotus. The Windsor, or horse bean, is receiving considerable attention. It is a very practical crop in the light sandy soil because it is extremely easy to get a stand with it. It is also the most rapid growing of any of the crops now available. If planted in late September or early October it should be ready to invert by the middle of February. Canadian field peas have frequently been used, and in season when the mildew does not seriously injure them they are very satisfactory. It is even possible to raise certain of the wrinkled peas and harvest the product in individual cases. This, however, should

to plant per orchard acre must be determined according to the amount of land actually sown. Melilotus may best be planted before irrigation, sowing the seed with a hand broadcaster, covering it lightly with a pegtooth harrow or brush drag and furrowing out with shallow furrows close together. These furrows may be left open for subsequent irrigation. Vetch, horse beans and peas may best be planted as soon after an irrigation as the ground may be worked. It seems desirable to plant as deeply as possible with the drill and to furrow out for subsequent irrigations with furrows close together but shallower than the depth of planting. If drills are not available any of these crops may be sown broadcast and disked. In this case ten per cent to 25 per cent more seed should be allowed.

It is very desirable, particularly in the case of Melilotus, to give one extra irrigation two weeks after planting. This, however, applies to the usual case where the interval of irrigation is around 30 days. In many cases it will be found that this extra irrigation will cost practically the same as the difference in cost between Melilotus seed and the seed for the other crops.

It seems quite evident that the labor which is saved in winter cultivation will entirely cover the cost of planting the green manure crop and the values that may be derived are therefore clear profit. In view of this fact and in view of the present fertilizer situation every irrigated orchard in Southern California should raise a green manure crop this winter.

The secretary of the United States department of agriculture has just issued Circular 75. "Food Needs for 1918." It touches generally upon wheat and the necessity for producing more, but grains, beans, hay and other crops are also discussed. The circular will be sent upon request.

## Farm Loan Valuations

Fruit Growers Gathered at Pomona and Discussed Valuations of Appraisers from the Federal Farm Loan Bank. Orchardists Feel That They Are Not Given Justice

**T**HE federal farm loan bank has many problems, not only within its own directorate, but in its operations in different sections of the country. It has just observed its first anniversary, the members of the national body having been sworn in at Washington on August 17, 1916. On its anniversary it sent out a statement of some things accomplished during the first year, and perhaps in consideration of the radical change from any financial movement ever undertaken in this country the advancement has been great. This statement makes the assertion that loans to farmers are now being approved at the rate of nearly \$1,000,000 daily, and that 25 farm loan associations are being chartered daily. Each association represents about \$50,000 in loans. During its first year it has divided the country into 12 federal land bank districts. The banks have been established, appraisers have been named and a few of the lands have been valued by these appraisers. And this matter of appraisal—there is the

"Any smaller valuation would be prohibitive to the orchard industry to obtain the privileges and benefits of the federal farm loan act upon which they have so strongly relied and counted."

Further, that a committee be appointed, which committee reported at this meeting, as indicated above.

The chairman of the meeting was L. W. Cushman of Ontario and the secretary was J. K. Brown of Anaheim. The committee appointed to secure consideration of the matter by the board of officials of the federal farm loan bank and to notify them to observe orchard conditions in the southern part of the state was made up of L. W. Cushman, Ontario; S. S. Stahl, Fontana; J. W. Deupree, Lankershim; J. A. Adamson, Pomona; E. C. Cramer, Claremont; Ed F. Walker, Glendora; J. K. Brown, Anaheim; M. Seeley, Covina; W. J. Newsum, Garden Grove.

Orchardists of California are complaining of the long time required to secure action from the Berkeley bank and the uncertainty of the valuations. The appraisers of the bank were discussing the matter of orchard valuations when the recent unpleasantness in the management of the bank at Berkeley occurred and so far as can be learned from the outside all loans were delayed. In any case, applications made nearly six months ago to the Berkeley bank are still unnoticed other than formal notification that the application was received and would be given attention.

Orchardists of Southern California who are members of local federal farm loan boards hope that by gathering together and discussing these perplexing questions they can bring their grievances to the attention of the Berkeley board so as to receive more attention than if each member acted individually. To further this end they gathered at Pomona last week. There were representatives present from farm loan boards at Pomona, Ontario, Claremont, San Dimas, Fullerton, Garden Grove, Anaheim, Glendora, Fontana, La Verne, Covina, Whittier, La Habra, Baldwin Park, Upland, Riverside, Chino and Dominguez.

This meeting was really the outcome of a former meeting held also in Pomona on July 14. At that time, which was before the change in administration at Berkeley, the matter was discussed and a series of resolutions adopted. Amongst the points raised are:

"Lands cultivated and improved, especially with orchards, are of many times greater value than raw, unimproved land, or land cultivated to other products, because of their fixity, endurance and the income from such improvements.

"The importance of the orchard industry is vast, not only to the section of the country in which such industry is carried on, but as well to the nation, and by reason thereof merits a very favorable and early consideration of the applications of the various persons engaged in such industry for loans from the said bank.

"It is understood that loans have already been granted by said bank to applicants not engaged in the orchard industry, and those who are located in other sections of said bank's district than that of Southern California.

"It has been learned that an appraiser for said bank who has been authorized to estimate the value of lands aforementioned has intimated that the orchard lands of Southern California will be appraised at a figure very much less than productive value per acre.

"Such lands are easily of the value of from \$800 to \$3000 per acre, according to the age and variety of the trees, and first class security at such valuation, and so considered by local banks which are in touch with their true values.

## POWER-FARMING Machinery

"The farmers of the Nation should do everything in their power, as I am sure they will, to improve the efficiency of their farming operations and to extend them wherever it is practicable to do so."

WOODROW WILSON.

"I heartily endorse the suggestion that farmers plant the largest possible crops."

THEODORE ROOSEVELT.

Greater production and better efficiency on the farm means an increased use of tractors and tractor implements. Horses aren't equal to the emergency; labor is scarce. The modern power-farming outfit displaces from two to eighty horses, does their work with less trouble and less expense, requires only one or two men to operate it, works day and night when necessary, reduces costs, increases efficiency. Now is the time, more than ever before, to investigate and adopt power-farming methods.

## At the California State Fair

SACRAMENTO, SEPT. 8-15

In a big joint exhibit in the Tractor Tent you will find the most complete showing of tractors and implements ever made at the State Fair. There will be more than twenty separate exhibits, covering 25,000 square feet of floor space. You will have the opportunity to see and compare, and to select the equipment best suited to your needs. Don't fail to take advantage of this real educational opportunity. Here are the concerns ready to assist you to more efficient farming:

1 Hook	.20
Labor	4.00
Basket - 16"	2.45
Caldron - 40 gal.	9.45
Total	\$25.85

to be efficient and economical of labor is figured above. The main essentials are a 40 gallon caldron which is built into a brick firebox, a 16-inch heavy wire basket for containing the fruit to be dipped, and a lifting device for moving the basket.

secure rigidity the upper pivot should be attached to a tree or building. Caldrons and wire baskets are manufactured by makers of packers' and dealers' machinery and should be procurable through hardware dealers. Larger, patented outfits are also on sale.

## Teach Apple Packers How

REALIZING the problem all farmers are having in the matter of incompetent help the food administration at Washington gives us the following hints as to instructing apple pickers:

Each grower should now get in touch with the chamber of commerce, or some other representative business organization in his nearest town, tell how many pickers he will need, when he will need them, for how long, and what arrangements he can make for housing or boarding them.

When his crew of volunteer pickers reports for duty he must open a little school for a day or two and give them practical instruction in their new work. Many of them perhaps have never seen an apple tree, and even those who have may not understand that apple picking is a kind of work that requires as much delicacy as gathering eggs.

Let the grower tell his pickers how the skin of an apple, or any other kind of fruit or vegetable, is like the tin that protects canned goods. As the tin that encloses a can of tomatoes guards the sterilized contents from the air, and as even a slight pin hole in this tin would allow the air to enter and carry germs of decay, so the skin of an apple protects its flesh, which is perfectly sterile, and the least cut, even a dent made by a finger nail, allows germs to enter and start decay. A cut so tiny that it can only be detected under the microscope at picking time will, nevertheless start a germ invasion which will show up later when the apple is packed and put into storage.

For this reason great care must be taken in picking fruit. The grower should show the pickers how to grasp an apple and give it the skillful twist that separates it from the tree. He must caution them against dropping the apples carelessly in the boxes and baskets, and see that they have picking baskets and field boxes which are free from splinters and nails.

This year's crop will have to be managed along somewhat different lines in many sections. With a crew of trained pickers and packers it is customary to grade and pack much of the fruit as fast as it comes from the trees. There will probably be a shortage of packers, and many growers will have to devote all their ef-

forts to picking the crop and getting it into temporary storage first, and then packing it later.

More good apples are spoiled every year by carelessness between the time they are picked and the time they are packed than in any other way. Fall nights are cool, but fall days are apt to be warm. Apples are left in the orchard several days and alternately cool and heat with the change in temperature until their quality deteriorates. The proper way to care for apples is to put them into common storage as soon as they come from the tree. Almost any good tight building will answer for the temporary storage needed between picking and packing.

When fruit leaves the tree it contains vegetable heat just as an animal has animal heat, and as the carcass of an animal will spoil after killing unless it is properly cooled, so fruit will spoil unless cooled. With a tight shed, into which fruit can be carried direct from the orchard, the grower can use the cool nights of autumn to take the heat out of his fruit. Doors and windows of the temporary storage shed should be opened at night to admit plentiful currents of cool air and when the sun comes up and the outside air grows warm again the storage place should be closed to exclude warm outer air as much as possible and keep the fruit nicely cooled. If apples are handled in this simple and sensible way they will have prime keeping quality and the work of grading and packing can be postponed for several weeks.

There is a fairly large apple crop throughout the country this year. It amounts to about two bushels for every man, woman and child in the United States. From the consumer's standpoint it is important to have as much of this fruit as possible go to market in first class condition, so that it may help us conserve wheat, meat, fats and other staple foods for our Allies. From the producers' standpoint it is just as important to harvest the crop in the best condition because the size of our apple crop this year is such that only the best fruit will bring good prices.

Surveys on the All-American Canal which will carry water to about 200,000 acres of lands of the Imperial Valley were started last week.

## Jimson Culture

Written for California Cultivator By Martha L. Baker

**J**IMSON culture, which was begun this year in Tulare County with Porterville as the center of the industry, bids fair to become another successful agricultural venture in that part of the San Joaquin Valley which already boasts of a diversity of industries, and will no doubt lead to culture in other parts of the state.

should be planted to a hill or spot and it should be planted from four to six inches deep. Less than a pound of seed is required to plant an acre. It is irrigated similarly to corn, potatoes and the like.

Watch must be kept of the plants to keep them free of insects, the most common to be found on the jimson being the ordinary tobacco worm and

Jimson Weed Growing in Tulare County

The accompanying photograph was a bit of the prize jimson crop growing in the Porterville district. A jimson is eight feet tall and will yield from two to three tons to the acre. The average crop, however, will yield over half or less than half that amount.

The soil and climatic conditions of the district seem particularly adapted to the culture of jimson which grows best in a sandy loam. The industry is new in the state and Porterville is at present the center of the industry. Over 300 acres are being grown in that section. There is a small acreage at Escondido. Jimson is shipped to St. Paul, where it is manufactured into medicine for asthma, catarrh, consumption and other diseases.

The latter part of March and the first of April is the best time to plant, which will allow of the several harrowings and full time for the maturity of the seed pods before frost. The ground should be thoroughly wet before planting, which is done with a plow. The furrows should be several feet apart to allow of cultivation, and plantings are made from three to four feet apart instead of in a furrow. The ground can be cultivated in both directions. Only six or seven seed

### GLENN COUNTY FARM BUREAU

W. H. Heilemann, Farm Adviser, is giving to the series of meetings and special conferences during the month of September the regular farm bureau meeting schedule for the month will be suspended.

September 10-11 there will be held at Sacramento a state conference, including representatives of the state council of defense, farm bureaus, farm advisers and representatives of the agricultural college. This will be an important conference and our arrangements for same should be made at our next directors' meeting.

On September 15 the annual meeting of the Glenn County farm bureau will be held, when officers will be elected for the coming year. The future success of the farm bureau will depend upon the careful selection of members for its government.

September 26-29 inclusive the first county fair will be held at Orland. Directors are urged to interest their centers in this fair and make every effort to assure the display of products from various parts of the county. This fair is of great importance and will merit the unreserved support of every farmer in the county.

The extension division of the state college of agriculture will have an exhibit at the county fair and the home economics division will give a series of lectures and canning demonstrations during the fair period. The farm adviser will have an office at the fair

small fleas of several colors. These are combatted by spraying with arsenate of lead or a solution of nicotine, both of which can be procured of a druggist with directions for use.

## How Many Acres Have You?

YUBA TRACTOR 12-20

In citrus orchards, when continuous cultivation is demanded, 60 acres warrant investment in a YUBA.

For 60 to 100 acres of orchard, the YUBA is right in height and power.

It's the right width for 20-inch beets, 7-foot asparagus, and 7-foot vineyards.

On small farms one is enough. Large companies buy two or three.

With the Yuba All-Around Plow, it's a one-man outfit—a profit maker.

### Yuba Manufacturing Company

433 California Street, San Francisco

Factories at Marysville and Benicia, Cal.

YUBA TRACTOR 20-35

For the grain grower and biggest fields—for heavy work:

- plows 15 to 20 acres a shift
- discs 35 to 40 acres a day
- hauls 20 tons on high speed
- operates a 32-inch separator
- pulls combined harvester with 20-foot cut.

The ideal machine for the wheat farmer, the rice grower, the bean raiser, and the contractor.

## Three Holstein Herds at Dispersal Sale

The big two day sale of registered Holsteins at Santa Ana, will include the absolute dispersal of three herds, those of Ernest Otto McClure, Santa Ana; A. Satterberg, San Jacinto; and P. H. Jarrett, Lancaster, and this splendid offering will be supplemented by choice consignments from McAllister & Sons, Chino; Santa Anita Rancho, Santa Anita; R. Nadeau, Sagus; and Aro Farm, Buena Park.

This sale will be a feast for those who want some of the highest record blood and some of the finest individuals ever offered in the state. Among the females will be,

- 16 Granddaughters of King of the Pontiacs.
- 3 Daughters of Sir Skyland Ormsby Hengerveld.
- A Granddaughter of Rag Apple Korndyke 8th, one of whose sons recently sold for \$53,200.00 at public auction in Massachusetts.
- A Granddaughter of Tilly Alcartra, the world's greatest dairy cow.
- A Daughter of De Kol Hengerveld Burke.
- Highly bred cows and heifers in calf to a son of Colantha Sir Aaggie.

### Among the bulls sold will be

- KING PONTIAC NETHERLAND SEGIS, son of King of the Pontiacs and out of a great daughter of King Segis Pontiac.
  - KING KORNDYKE PONTIAC 20TH, whose dam is the California State Record cow of all ages, with an official record of 36.80 pounds butter in 7 days as a junior three year old, and she is a daughter of the great young sire Prince Gelsche Walker.
  - KING MORCO ALCARTRA 3D, son of King Morco Alcartra, whose dam is Tilly Alcartra.
  - DUKE CORNUCOPIA SARCASTIC, whose dam is the great 34 pound cow Alba Sadie Cornucopia Creeta.
- And there will be other splendidly bred bulls to meet the most exacting requirements of breeder and dairyman.

### Soft Soap

Kindly advise through your columns how to make the old-fashioned Eastern soft soap, the kind our grandmothers used to make. I understand it is made out of wood ashes, tallow or something else, but don't know the proportions. Have been told that a similar soft soap can be had at the drug stores but do not believe its chemical analysis would be the same as that of grandmother's soap.—Subscriber, Whittier.

The writer well recalls the erecting of the old leach, dumping in the ashes and helping at soap making time, but as we remember, and so far as we can learn upon inquiry, the operations were conducted under the rule of thumb. However, here are some hints from memory and we will ask our subscribers who have had experience in soft soap making to describe or give other points in this operation: In grandmother's days we do not think canned lye was available. Then a barrel or sometimes a square leach was erected. If a barrel it was on an inclined waterproof bottom with strips nailed or channels gouged in it to conduct the water which leached through the ashes to the big kettle or crock which was set under its edge. The bottom of the barrel was filled with clean new ashes at starting. The ashes were filled in and the water poured on top. As it leached through it came out a straw color and its strength was tested by the use of a fresh egg. If the egg floated, good; if not, the lye was poured back through the ashes again. The quantity of lye and soap greases, so far as we remember, was entirely a matter of experience. After boiling in a big cauldron the surplus lye and the bones settled to the bottom, and if the soap was too thin and watery it was thickened by adding water. We recall that this soft soap was rather caustic or had an excess of lye. We note the following in the Britannica as to soft soap: "Soft soaps are made with potash lyes, although in practice a small quantity of soda is also used to give the soap some consistence. There is no separation of underlies in potash soap, consequently the product contains the whole constituents of the oils used, as the operation of salting out is quite impracticable owing to the double decomposition which results from the action of salt, producing thereby a hard, principally soda, soap with formation of potassium chloride. Owing to this circumstance it is impossible to 'fit' or in any way purify soft soap, and all impurities which go into the pan of necessity enter into the finished product. The making of soft soap, although thus a much less complex process than hard soap making, is one that demands much skill and experience for its success. From the conditions of the manufacture care must be taken to regulate the amount and strength of the alkali in proportion to the oil used, and the degree of concentration to which the boiling ought to be continued has to be determined by close observation."

### Dipping Figs

Should figs be dipped before drying?—Subscriber, Placer County.

No, but they are usually dipped after drying in a boiling salt water, this for the purpose of destroying any form of insect or fungous life. After exposing to hot sun for a few minutes they may be packed away. Some varieties are sulphured. See Mr. Condit's article on Page 196.

### Sorghum Poisoning

I recently lost two cows which had broken from the field into one of

Egyptian corn and other sorghums. The veterinarian says their death was caused by sorghum poisoning. Is it safe for me now to cut this sorghum and haul it to the field and feed cattle or will it poison them?—Subscriber, Lanare.

Woll's "Productive Feeding of Farm Animals" says: "Serious trouble, and even death, has at times resulted from cattle or horses eating second growth sorghum. This generally occurs after periods of frost or extreme drouth when the plants have been stunted in their growth and afterwards begin to grow. It is due to the formation of a glucoside in the new shoots which sets free prussic acid through the action of a ferment. Accidents usually have happened when pastures were short and cattle get into a field of sorghum, eating considerable of it on empty stomachs. They should, therefore, be given some feed before being let into fields of such sorghum, since no trouble will occur when second growth sorghum is made into hay or silage. The safer method is to use it for one or the other of these purposes."

### Aphis

Please give remedy for lice or aphids on cucumber and melon vines. The vines have been thrifty up to the present time.—Subscriber, Chino.

If when the aphids first appear the vines which are badly infested are burned and the remaining vines sprayed with tobacco or kerosene emulsion sprays, and all weeds or grass which might harbor other pests are destroyed, it will aid materially in the control of the pest. If, however, the pest is generally distributed spray with black leaf "40," two to three pounds to 200 gallons of water, or the kerosene emulsion which is made as follows: Kerosene 20 gallons, whale oil soap five pounds, water 10 gallons. Dissolve the soap in hot water. Add the kerosene while the suds are still hot (be careful not to get the kerosene too close to the fire) and mix thoroughly. After thorough emulsionation dilute with cold water one to eight.

### Drying Cluster Raisins

Please give method of drying grapes for table use, the same as employed in putting up the fancy cluster raisins which are used for the Christmas trade.—Subscriber, Modesto.

The grapes are dried on trays the same as ordinary grapes are dried, but greater care is used in picking and turning. If the cluster can be spread carefully it hastens the drying process. Then in a few days the cluster should be turned. Instead of turning the entire tray, as is usually done with the general run of raisins, lift each cluster carefully by the stem. When nearly dry it is better to stack and finish drying in the shade. See Prof. Bioletti's article of page 196 of last week's Cultivator.

### Propagating Berries

I wish to propagate a large number of cuttings of Himalaya and Logan berry plants for some reclamation work. I will use crown roots and also what tip roots may be available. I were to set canes in nursery row at

**BABY CARLEY BARLEY ROLLER**  
—Stops the High Cost of Feeding—  
Will Roll 10 sacks per hour with 3 to 4 h.p. engine.  
Costs only \$65 delivered.  
Many say it is the best money-maker on the farm.  
Larger sizes to meet all requirements.  
Ask your dealer or write  
**THOMAS R. BROWNE, Stockton, Cal.**

his time would they grow and be available for planting by February next? What time should the cuttings be made and should old canes be used or those of this season's growth? I am leveling a line at about five miles or the purpose of catching silt, which washes across the land each winter. The berries will be grown on a wire fence on top of the line of levee for the purpose of protecting the levee and at the same time assisting in taying the flow of the silt.—Subscriber, Oxnard.

We do not think blackberries could be propagated satisfactorily from cuttings of the canes but they may be by the use of root cuttings. If one has a greenhouse the roots may be cut even as short as one inch when placed in sand and satisfactory growth secured. Perhaps a better way would be to practice deep cultivation, or disturbing of the roots of the old plants, when they will automatically send up a great number of shoots from the roots which have been disturbed. In addition to the "tip roots" one may layer the entire cane and secure shoots from each joint. This is especially true of the loganberry. The root cuttings should be made in the late fall or early spring. If for layering one should use the present season's growth.

#### Strawberries not Bearing

Have about 200 strawberry plants set out one year ago which are in thrifty condition but do not bear. This spring I purchased 200 plants more and treated them in identically the same manner, planting in an adjoining bed. The new plants are bearing at this time. Would it be advisable to dig out the older plants and reset or will the new ones help to pollinize and make fruitful the older plants?—Subscriber, Concord.

It is possible the first plants purchased had been allowed to waste their vitality in bearing crops before they were reset or, as suggested by the inquirer, it is possible non-pollination may be a factor. If the plants are thrifty we would give opportunity to bear, since they are now interset with the new plants which have been secured. In sending questions of this kind if particulars regarding variety and method of growing the young plants could be given more intelligent answer could be made.

## Legal Queries

Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department.

Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 115½ N. Broadway, Los Angeles.

#### Contract Form

In case of contract of sale of beans from ranch it reads "In consideration of one dollar, etc.," the dollar was not paid. Can I be held on this contract?—Subscriber.

The dollar is only a small portion of the consideration to the usual contract such as above; the agreement to buy and pay the price stated is usually the real consideration. Not seeing the contract it would be impossible to give any opinion thereon, other than as above.

#### Wife's Signature to Deed

In order to make a deed valid is it necessary to secure the signature of the wife, or is the husband's enough?—Subscriber.

Prior to the 27th day of July, 1917, a deed executed by the husband alone covering real estate which was the separate property of the husband or was community property of the husband and wife, in a transaction where in a valuable consideration was received for the property, was valid and sufficient to convey full title to the property. The legislature of 1917 however, changed this law in so far as the community property is concerned so that under the present law, while the husband still has the management and control of the real property of the community, the wife must join with him in executing any instrument by which such community real property, or any interest therein, is leased for a period longer than one year, or is sold, conveyed, or encumbered; provided, however that a

lease, contract, mortgage, or deed executed by the husband alone, when he holds the sole record title to the property and the other party acts in good faith and without knowledge of the marriage relation, is presumed to be valid and there can be no action to avoid such instrument so executed by the husband alone after the expiration of one year from the date of filing the instrument for record in the office of the recorder of the county in which the land is situated.

#### Liability of Auto Driver

If you take a person for a ride in your auto, or pick him up on the road, and meet with an accident, either caused by your own negligence

or by the other party, are you liable for damages to your passenger?—Subscriber.

A person may carry another or not as he deems best; if he does carry another he is liable to the passenger for losses or injuries which result from his negligence and is bound to exercise ordinary care to preserve his passenger from accident; for failure of which the carrier is liable in damages; he is not liable to the passenger, however, for loss or injury occasioned by any other person, for the reason that he is not a carrier for hire and thus does not assume any contractual relation with his passenger.

Tulare County has ten squirrel inspectors in the field.

Winchester Model 12—Hammerless  
Shotgun, 12, 16 and 20 gauge

## The gun with a dog's pointing instinct

A dog points by instinct. Its nose, body and tail come into line naturally—instantly. So with the hunter and his gun.

Armed with the right gun, he "points" it instinctively. If properly balanced, his gun comes up into line naturally, as easily as pointing a finger.

But if the gun is not right, if it has not been perfectly balanced in the shop, it won't work out well in practice, just as a dog, if not properly bred, will not work out well with its master in the field.

The Winchester Model 12 Repeater is a *thoroughbred* of shotguns. It has been classed

Quick feeder, sure ejector. Throws empty shells to the side, out of your way

by experts as "The Perfect Repeater."

Its balance enables you to get onto fast flying birds instantly. Pointed right, it never fails to bring down the game.

Fifty years of the best gun making traditions have produced in the Winchester Model 12 a gun of almost human instincts.

The right amount of choke for different loads has been worked out after exhaustive experiment. Result: a pattern that spreads out evenly—neither too scattered nor too bunched—and lands with lots of steam behind it.

It is a triumph of guncraft. Nicely balanced, with its slim, graceful barrel, the Model 12 is a beautiful weapon, with a fascination about it that few sportsmen can resist.

# WINCHESTER

World Standard Guns and Ammunition

*Even spread, maximum penetration. Winchester shot pattern brings down the game.*

# The pattern that brings down the game

The remarkable game-getting pattern of the Winchester Model 12, shooting its own standard ammunition, is the result of infinite care taken in boring the barrel.

## The barrel is the gun

Men who know guns realize that the accuracy and durability of a gun lie in the barrel. On the quality of the barrel depends the quality of the gun. There is absolutely no difference in the standard quality of the barrels on the highest and lowest priced Winchester guns. With Winchester, the barrel is the gun, and the single standard of quality has been attained only by the most unremitting attention to the boring, finishing and testing of the barrel. The same high quality of Winchester barrel is found on every gun made by Winchester. The great volume of guns sold makes this policy possible.

## The Winchester barrel

The barrel of the Winchester Model 12 has been scientifically bored to micrometer measurements for the pattern it is meant to make.

The degree of choke exactly offsets the tendency of the shot to spread. Until its pattern proves up to Winchester standard, the gun cannot leave the factory. The Bennett Process, used exclusively by Winchester, gives the Winchester barrel a distinctive blue finish that with proper care will last a lifetime. The Nickel Steel construction preserves the original accuracy forever.

## What means

This mark on the barrel means *Viewed and Proved Winchester*. This stamp stands for Winchester's guarantee of quality, with fifty years of the best gun-making reputation behind it.

Every gun that bears the name "Winchester" and that is marked with the Winchester Viewed and Proved stamp has been fired many times with excess loads for strength, smooth action and accuracy.

At every stage of Winchester manufacture, machine production is supplemented by human craftsmanship. It is a *test and adjustment* process.

It is this care in manufacturing that has produced in the Model 12 a gun of unsurpassed game-getting qualities and whose grace, balance, beauty of lines, and never failing performances in the field have earned it the title of "thoroughbred of shotguns"—*the gun with a dog's pointing instinct*.

*For those who prefer a hammer action gun, we have made the Model 97. It is built on exactly the same lines as the Model 12, but with hammer action.*

Write for details of Winchester shotguns, rifles and ammunition

The Winchester catalog is an encyclopedia on shotguns, rifles and ammunition. Every hunter should have one. It gives detailed specifications of the Model 12 and describes at length the principles on which every one of the world famous Winchester shotguns and rifles is built. Write today. We will mail you a copy free, postpaid.

## OUR ADVERTISERS RELIABLE

We guarantee our subscribers against  
 loss through dishonesty of any adver-  
 tiser in the Cultivator. We do not at-  
 tempt, however, to adjust trifling differ-  
 ences between subscribers and honest,  
 responsible advertisers, nor will we pay  
 the debts of honest bankrupts. Notice  
 of complaint must be sent us within 30  
 days from date of the transaction, and  
 the subscriber must have mentioned the  
 Cultivator when writing the advertiser.

## THIS WEEK'S COVER

A few weeks ago accounts of  
 public sales of Shorthorns in nearly  
 all sections of the East contained in  
 the lists of purchasers the name of  
 T. T. Miller, and invariably the top-  
 notchers were the ones purchased by  
 him. California Shorthorn breeders  
 inquired: "Who is Miller?" With  
 others, the Cultivator was interested,  
 and its field men have looked up some  
 of this great stock and on it have  
 used the Cultivator camera to excel-  
 lent results, as may be witnessed by  
 several illustrations in this issue,  
 chief of which is on the cover page.  
 This magnificent animal, Diamond  
 Choice, is a 2400-pounder and we be-  
 lieve will be at the state fair this  
 week.

## SULPHURING

The California Peach Growers  
 are making an investigation which  
 should lead to practical results. How  
 much sulphur to how much fruit is  
 a question which has vexed many a  
 fruit grower. There is no agitation  
 against the use of sulphur such as  
 came up a few years ago, but the  
 fruit grower is anxious to put out a  
 product which will make a permanent  
 name for itself, and if a high grade of  
 fruit can be prepared with less sul-  
 phur it is desirable to know it. It  
 has been found that some peach dry-  
 ers have sulphured until the "cup" is  
 filled and running over with the juice  
 extracted by the long sulphuring.  
 This lowers the appearance of the  
 fruit, is a waste of sulphur and may  
 encourage federal regulations. Let us  
 reform and let us standardize and  
 make a product above reproach.  
 Strength to the arm of the Peach  
 Growers.

## SECOND LIBERTY LOAN

More particulars of the second  
 liberty loan will be sent out soon by  
 the treasury department. The print-  
 ed forms of the first liberty bonds  
 have not yet been distributed. It  
 seems there has been some question  
 as to their recall and the issuance of  
 a four per cent bond instead. It is  
 now rumored that they will be sent  
 out as originally intended and will  
 bear the three and a half per cent,  
 and if the newly issued bonds bear  
 the four per cent they will not be ex-  
 empted from the provisions of the in-  
 come tax law, while the first issue  
 will be. In any case, more bonds are  
 coming, and, as the treasury depart-  
 ment announces in the advertisement  
 on page 196, it is time to be saving  
 your money for that next issue. The  
 United States is borrowing large; it  
 is also planning and doing things in a  
 large way, and not the least of these  
 is the aiding in the financing of the  
 Allies. It is said that already over  
 \$2,000,000,000 of gold has been loaned  
 to our Allies, so, while it appears that  
 we are going deeply into debt, it must  
 be remembered that there are others  
 to aid in the paying of the debt.

This is a time when money talks as  
 never before, and therein lies a great  
 power of America.

## BLUE RIBBONS

The livestock, which is given  
 such prominence in this week's Culti-  
 vator, will not be the only wearers  
 of blue ribbons at the coming state  
 fair. From the Cultivator force there  
 will be C. B. Messenger, the editor,  
 M. C. Holman of the San Francisco  
 office, C. A. Briggs and C. L. Hughes  
 of Sacramento, W. S. Guilford of the  
 Sacramento Valley, Field Man F. F.  
 Stonerod and several from the circula-  
 tion department. Two Fords will  
 also be on the job, and all decorated  
 with blue ribbons. This because the  
 Cultivator is a blue ribbon winner.

Look at this particular issue. It's  
 the biggest ever; biggest in number  
 of pages; biggest in number of papers  
 sent out; biggest in appreciation  
 shown by advertisers; biggest, we be-  
 lieve, in enterprise of any farm pa-  
 per yet issued on the Pacific Coast.

We have done so well that we will  
 not apologize, but we may be per-  
 mitted to call attention of fruit grow-  
 ers and farmers other than livestock  
 men to the fact that while the live-  
 stock people have largely monopolized  
 this one issue, they have no in-  
 tention of continuing their monopoly.  
 The Cultivator is a paper for the  
 farmer and fruit grower. Articles  
 which will be of special interest to  
 citrus and other fruit growers are in  
 hand and under way. In other words,  
 the Cultivator is doing its bit to the  
 best of its ability and hopes to pass  
 the word along to all productive in-  
 terests of the Coast and the South-  
 west.

## TRACTORS AND FARM TRUCKS

In honor of the coming tractor  
 demonstration the Cultivator will  
 next week give particular attention  
 to tractors and trucks and farm pow-  
 er discussion generally. The demon-  
 stration will be held the week fol-  
 lowing, September 18-22. This will  
 give opportunity to every farmer to  
 learn more regarding farm power and  
 tractor farming than perhaps any  
 similar event on the Coast. This  
 week's showing of tractors and im-  
 plements at the state fair will be  
 touched upon in that number. There  
 will be articles on many other fea-  
 tures of tractor work and the way  
 generally will be open for more mate-  
 rial regarding farm power at the Los  
 Angeles demonstration. The tractor

and farm implement people are faced  
 by a most serious problem, that of  
 shortage of steel. They are appeal-  
 ing to the council of defense for aid  
 in this matter, and so far as lies in  
 their power will supply the where-  
 with for producing America's great-  
 est crop next year. Farmers are  
 more than ever awakening to the  
 fact that their production of this year  
 must be vastly increased another  
 year. Europe's productive power is  
 growing less every day. America  
 must meet the need. California pro-  
 ducers will do their share. The cul-  
 tivator hopes it may aid in this cam-  
 paign in giving particular attention  
 to means of adding strength to their  
 arms.

## SAVE THE SEED

There has been organized with-  
 in the ranks of the United States de-  
 partment of agriculture a committee  
 on seed stocks, which committee is  
 taking steps to locate all available  
 stocks of first class seed of agricul-  
 tural crops, especially wheat, oats,  
 rye, crimson clover, hairy vetch, al-  
 falfa, etc. The committee is asking  
 everyone who has an available sup-  
 ply to report to the committee, care  
 of United States Department of Agri-  
 culture, Washington, D. C.

Governor Stephens has called a  
 meeting to be held in the state capitol  
 at Sacramento on Monday, Sep-  
 tember 10, to consider effective means  
 of cooperating with the United States  
 department of agriculture in carry-  
 ing out the purpose for which an  
 emergency appropriation of \$10,000,-  
 000 was made by congress. Part of  
 this \$10,000,000 appropriation is to be  
 used through the state agricultural  
 colleges. In calling the conference  
 Governor Stephens suggests discus-  
 sion of: Extending the farm bureau  
 system, increasing the number of  
 women demonstrators of fruit and  
 vegetable canning and other forms of  
 food conservation, and extending the  
 work of boys' and girls' clubs in the  
 public schools.

Working in conjunction with these  
 colleges are 3,000 county agents  
 working under 3,000 farm bureaus in  
 3,000 counties of the United States.  
 California is allotted something over  
 \$100,000 which will be administered  
 by the university. Governor Stephens  
 as chairman of the state council of  
 defense and president of the board  
 of regents of the state university asks  
 producers of California to meet him  
 in Sacramento and discuss methods  
 of accomplishing greatest production  
 and the greatest good for our country.

We believe no state has responded  
 to the country's call for troops and  
 for food more heartily than has Cali-  
 fornia. Our response for another year  
 should be even more patriotic.

## \$2.20 WHEAT

For once in the history of the  
 great gambling centers futures in  
 wheat will not be in good form. Many  
 farmers are complaining because of  
 government limitations and practical  
 government guarantee of prices on  
 food and staples. We are not cer-  
 tain ourselves where the matter will  
 land, but true it is there is satisfac-  
 tion in the fact that there has for  
 once been a limitation to the activi-  
 ties of the gamblers in staples and  
 foods.

The price differentials worked out  
 by the food administrator are: No. 1,  
 dark hard winter, \$2.24; hard winter  
 basic, \$2.20; red winter basic, \$2.20;  
 yellow hard winter, \$2.16; soft red  
 winter, \$2.18; dark northern spring,  
 \$2.24; red spring, \$2.18; humpback,  
 \$2.10; amber durum, \$2.24; durum  
 basic, \$2.20; red durum, \$2.13; red  
 walla, \$2.13; hard white basic, \$2.20;  
 soft white, \$2.18; white club, \$2.16.  
 No. 2 of each grade is three cents  
 less; No. 3, six cents less; No. 4, ten  
 cents less.

Relative market basis: Chicago,  
 Galveston, New Orleans, basic; Kan-  
 sas City and Omaha, five cents less  
 than basic; Duluth and Minneapolis,  
 three cents less; St. Louis, two cents  
 less; New York, ten cents more than  
 basic; Baltimore and Philadelphia,  
 nine cents more; Buffalo, five cents  
 more.

Although the prices are fixed on  
 government purchases only, the food  
 administration, through its wheat cor-  
 poration, expects to control the mar-  
 ket without difficulty. The corpora-  
 tion will make all government and

Allied purchases and has under  
 consideration plans to buy for millers.  
 It serves as broker between the  
 mill and the flour mills the cor-  
 poration will become purchaser of vir-  
 tually all the country's wheat crop.

This step will prove bitterly  
 appointing to many wheat grow-  
 ers. On the other hand some will see  
 there is an advantage in a guarant-  
 price which is a certainty and bet-  
 ter than gambling.

We have secured the U. S.  
 Patent Rights  
 FOR THE

**Australian KING****STUMP JUMP PLOW**

(PATENTED)

Built Expressly for Small Tractors

Four-Disc Plow, Convertible to One  
 Furrow Less if Desired

ITS STUMP JUMP feature is invaluable  
 in orchard work. Its special utility is in  
 scrubby or stony lands. When other makes  
 plows encounter similar conditions, the  
 plow is thrown entirely out of the ground,  
 sometimes very disastrous results.

With the STUMP JUMP PLOW, when a disc  
 strikes a root, stone or stump, that one disc  
 jumps or rolls over the obstacle while the other  
 discs continue to the soil.

EXPANDING FRAMES.  
 It is made to adjust to any desired width  
 furrow, from 8 1/2 to 16 inches. All furrows  
 and furrow wheels are automatically adjust-  
 ed to width, without taking the plow asunder,  
 the removal of any parts. Time required, 10  
 minutes.

THE DISCS are made to adjust to a variety  
 of angles to give more or less grip for varying  
 conditions of soil.

EXTRA WIDE TIRES, as illustrated. Keep  
 the plow up in light or spotted soils. They also  
 lessen the draft.

## SPECIAL LOW LIFT FOR ORCHARD WORK.

For the SMALL TRACTOR this plow offers  
 many wonderful advantages over other makes.

We can assure our customers that this  
 plow is the best plow made for small tractors  
 and will give in all conditions of soil, perfect  
 satisfaction.

THE OLD STYLE

# Agricultural News Notes of the Pacific Coast

## Northern California

Yacaville, Solano County, recently shipped 121 carloads of fresh fruits one week.

The rice harvest is on near Butte, three eight-hour shifts running harvesters.

Contra Costa County is using labor prisoners of its county jails in road construction work.

A spider is still causing considerable damage to almonds and prunes in Sacramento Valley.

The first Glenn County Live Stock, Poultry and Agricultural Fair will be held at Orland, September 26-30.

Trucks are running day and night shipping fruit from Nevada County to the pears orchards to market.

Butte County's rice crop is in exceptionally fine condition and the rice is at Biggs are being fitted for a run.

The forest service is making a campaign on plants poisonous to stock in Placer, Sierra and Stanislaus national forests.

The field force of the state veterinarian is being enlarged and reorganized in order to better enforce laws affecting live stock.

Napa County Grape Growers are protesting the action of the California Grape Protective Association enjoining the Rominger bill.

The national forests of California are now supporting 204,935 head of cattle and horses and 465,752 head of sheep and goats. This is a large increase over last year.

The turkey buzzard, protected for many years because of its being a scavenger, is now under suspicion of being a distributor of hog cholera and other live stock diseases.

"12,000 acres more for production" is the slogan of producers near Gridley where it is planned to take water from the Western Canal south of Gridley and reclaim more lands.

## Central California

The cannery at Tulare is running on tomatoes.

The Modesto irrigation district has closed operations for this season.

The government fixing of wheat has stopped all wheat purchases in the valley.

Livingston, Merced County, is marketing around 25 cars of watermelons weekly.

The foothills of the Sierra Nevada were visited by a heavy rain storm last week.

The Sperry Flour Company of this state sold over 2,000,000 barrels of flour last year.

The Selma cannery is paying a \$2000 a day labor bill and appealing for more help.

Ceres, Stanislaus County, is planning for an exhibit at the coming fair at Modesto.

Dairymen at Ripon have formed a cream pooling association, and will join the state milk association.

Dr. Fortier and Frank Adams are inspecting irrigation projects along the eastern side of the San Joaquin Valley.

County Horticultural Commissioner Collins of Tulare County is serving notices on orange growers to control the gray scale.

Twenty pure bred Holstein heifers were recently sold by Vogel of Fresno for shipment to Japan. The consideration was \$8000.

The Valley Fruit Growers Association has already secured jobs for about 1000 laborers and is aiding materially in clearing up the valley labor situation.

Terra Bella, Tulare County, is making an irrigation experiment in boosting water. Four wells are now producing 207 miners inches which are given a lift of 110 feet to a reservoir, thence irrigation is by gravity.

## Southern California

San Luis Obispo County is building an oiled road near Casmalia.

Every bean growing section is appealing for more harvesters.

The Alfalfa Growers' Association is now holding first class alfalfa at \$21 per ton.

Pomona citrus orchardists are doing some fumigating this year with liquid gas.

The Riverside County Fair will offer prizes for drills of home guard companies.

Walnut growers are now hoping that the output this year will be as large or larger than that of last year.

A cannery at Hueneme, Ventura County, is now running on tomatoes and planning to run later on sardines.

Pomona and Ontario canneries are running full handed. One cannery at Pomona is paying a \$3000 labor bill daily.

Citrus growers anticipate that prices of the next year's crop will be the largest ever received for citrus fruits.

Orange and lemon growers of San Dimas, in Eastern Los Angeles County, have received \$850,000 for this season's fruit.

The Hemet Apricot Growers' Association has been given permission by the state corporation commissioner to sell 5000 shares of stock at par.

The government crop report estimates the present season's output of beans from this state at 6,480,000 bushels, as compared with about 4,000,000 bushels last year.

The pear harvest at Little Rock in the Antelope Valley has been in progress several days, and while the crop is a little light it is running to large sizes and it is believed that fully as much tonnage will be obtained this year as last. Pears are not grading up quite as well as in former years.

## The Coast

Over 10,000 acres of peas were grown near Moscow, Idaho, this year.

Arizona cattlemen are refusing to sell any stock which may be possible breeders.

The Caldwell Cattle Company of Idaho just added a \$1000 Shorthorn bull to its holdings.

Idaho potato growers are complaining because of advanced freight rates to Middle Western points.

Guernsey men of Clackamas County, Oregon, have organized a County Breeders' Club to boost the Guernsey.

The Indians of the Pima Reservation of Arizona, are proving their patriotism by producing some exceptionally fine crops.

A large irrigation system near Caldwell, Idaho, has just installed an extensive irrigation district which cost \$18.80 per acre.

Managers of the stockyards at Portland, Oregon, insist that no good dairy animals are sent from those yards to slaughter.

One county in Idaho which has never produced beans marketed its first crop this year. It will have a value of over half a million dollars.

The state experiment farm between Mesa and Tempe, Arizona, reports that it has just threshed from one plot 100 bushels per acre of Texas "rolled" oats. This is surely a novelty and saves milling.

The chamber of commerce of Phoenix, Arizona, is leading in an effort to get together an "All-Arizona" exhibit to be placed at the International Soil Products Exhibition at Peoria, Illinois.

Dairymen of Skagit County, Washington, have voted to raise \$200,000 for the establishing of a condensary, this because dairymen contend that condensaries already established have not been fair in their treatment of the people.

## NORTHERN ARIZONA FEEDERS and STOCKERS

### (High Grade Herefords)

Feeders and stock cattle found along the Santa Fe railroad line in Arizona, are raised on the high mountain slopes and grassy valleys, are exceptional in bone, grade and quick weight producing qualities.

The heaviest of all the Northern Arizona yearling steers are grown in the famous White Mountains on a fenced ranch with plenty of grass, brush and fine oak, cedar, and pine trees, and many running streams. On our Apache ranch, 90 miles south of Holbrook, yearling steers branded (O R —), after the long drive and overnight shrink, will average right around 685 pounds each in October and November. In early spring they will weigh 500 to 550 pounds at the railroad.

The Apache ranch is not a large one as Arizona ranches go, but we usually have a limited supply of choice yearlings and stock cattle, and this year in addition some fine 450 pound calves, IDEAL FOR BABY BEEF.

## Elliott-Brant Rancho GUERNSEYS

Our registered Guernsey cattle have proven their worth in both the show ring and in the Advanced Register tests. Our A. R. records, made on home grown products, and under herd conditions, compare favorably with any in the country and they average far above the average of the breed.

Our herd contains over 125 pure-bred Guernseys. Our herd was one of the few in the state that did not show tubercular cattle under state tests.

### Our Herd is Headed by "WHITE FACE"

a Son of Langwater Stars and Stripes

Considered to be the best bred bull in America, he being a son of the greatest producing sire of the breed, Imp. King of the May, and out of Dolly Dimple, who was a leader in three classes for production.

## Who's Who

With the issue of August 11 the Cultivator started its series of "Who's Who" articles to bring before its readers some of the livestock producers of California who are responsible for the large development of the industry. Where did they come from and how long have they been engaged in California development, also how do they look, so pencil and camera are to be used, and some homely, everyday photographs and notes regarding them will bring us closer together. Bear in mind we say "homely" photographs and not photographs of homely people. The idea we wish to convey is that so far as possible we will secure photographs in everyday surroundings at the homes of the livestock producers.

Other sketches and portraits will appear in the next and following weeks.

Written for California Cultivator By F. F. Stonerod

HERE is there a man identified in any branch of the livestock industry who is better known or liked than M. Bassett? We insert the question mark here but it should have been left out.

Mr. Bassett is an all-around stock

Mark Bassett

man consistently no matter how strong the competition. This is no a boost for medium type Poland-China hogs as compared with big type or other breeds of swine, for we are certain that if Mr. Bassett would sell of his entire herd and start to breed something else he would be just as famous in a little while as he is now. The reason is that he is a practical man who has made a life study of breeding Poland-China hogs. By experience he knows what methods are best, and those that are worthless.

The name of Bassett has been an institution in Kings County for more than a generation. The large family of eight are all living, and two of the sons are managing the big Bassett ranches today. The Bassett estate is of several hundred acres planted in fine grapes, fruits, grains and grasses. The Bassett Indian corn has won many blue ribbons at state and county fairs. Many claim this variety of corn cannot be grown in California, but they never saw a Bassett cornfield in the fall.

Mr. Bassett is a great lover of horses. Percherons are his specialty. He has won grand champion ribbons twice at Sacramento on his imported stallion Ithos.

World's fair visitors recall the long string of Poland-China prizes Mr. Bassett captured. He has exhibited herds at the A. Y. P. Exposition in Seattle, the Portland Exposition, and has not missed a California fair for many years.

man, but his specialty is medium type Poland-China hogs. Times may change and other breeders may stray from long established principles of type and conformation, but Mr. Bassett goes right along breeding his kind of hogs and winning championships with

Mr. Bassett is a vice president of the American Poland-China Record Association, president of the Kings County Fair Association and a director in the State Swine Growers' Association. He is one of the pioneers in the California livestock field and the state is proud to own him.

## Balanced Rations Save Dairy Feed

AIRYMEN can solve the feed shortage by the same method that people are using to solve the food shortage; they can make what they have go farther. If food economies can result in feeding more people with the same amount of food, the same feed can feed more cows.

Dairymen who feel the pinch of feed shortage will do well to give special attention to balancing their herd rations. A balanced ration is an efficient ration. It means making the most of the feeds used.

Unless a proper balance between the protein and fat and carbohydrates content of the ration is maintained waste is certain. This waste may be in feed, in production, or both.

When the production of a cow is limited by the amount of protein in her ration the addition of more carbohydrates and fat does not help the situation. More fat and carbohy-

drates in that case only increase the amount of fat the cow is able to put upon her back.

This extra fat constitutes still another waste of feed. The dairy cow does better work when not in a beef-fat condition. Not only does extra fat on her back mean lost energy in putting it there, but additional lost energy in vitalizing and maintaining it.

Though seldom the case, carbohydrates and fat may be the limiting element in the ration while there is an excess of protein. This is more serious than an excess of carbohydrates and fat, for protein is more difficult and costly to obtain.

The fine point in feeding dairy cows is to use such feeds in such amounts as will give the greatest production at the most profit. This calls for balanced rations. With feed prices at their present altitudes it will pay dairymen to make a special study of their feeding practices.

## Joint Sheep Sale at Columbus Poorly Patronized

The lack of an adequate supply of sheep on Eastern farms and the urgent necessity of an increase in small farm flocks in that section prompted several of the largest breeders in the country to consign animals to the big public sale held at Columbus, Ohio, August 7-8. A. J. Knollin, Pocatello, Idaho, was the heaviest consignor. He sent more than 1000 head of good range sheep. Walnut Hall Farm, Ky., and McLaughlin Farm, West Virginia, consigned Hampshires. Rambouillets comprised a large part of the sale stock. The top of the sale was only \$150. Carload lots at \$500 and many individuals at \$1000 last

year at the Salt Lake sale shows the difference in the Eastern and Western demand.

Think of the bulk of these fine sheep selling at little better than mutton prices. The 358 head of registered sheep sold for \$12,434. The 1500 unregistered sheep and ewe lambs brought \$12,936.50.

Seven per cent of all corn has heretofore gone into whisky; none will go this year.

Exportation of corn will be greatly restricted this year for lack of ships.

## Breed Leaders

Every breed of live stock has its outstanding character the same as the human. A great dairy cow has proved her ability to produce anywhere up to 15 tons of milk annually; the trotting horse has secured his record around two minutes; the maker has shown his ability to make the least amount of feed into the greatest amount of food; swine, sheep and others of the live stock family have shown themselves as great characters. In addition—and here is where their worth is proven—these animals can transmit their productive power to their offspring. Beginning with the issue of August 4 the Cultivator gave an account of Pietertje, one of the university farm dairy herd. Some things she has done and more that daughters have done were chronicled. She was a most worthy leader in this line of articles. Others of her kind follow. More of the "handsome is as handsome" type of animals will be given in the columns of the Cultivator during the next months.

Written for California Cultivator By J. I. Thompson

ANKED with the best in both individuality and breeding ability is Long Advancer, 307610. This Duroc-Jersey matron was secured by the university from the herd of S. W. Hart and Sons, Kennard, Nebraska, during the summer of 1911. She was owned November 2, 1910, out of good sow Princess S, 288596, and sired by Chief Advance, 38675. She is a rangy, growthy pig when she

In 1914 a daughter of Queen of U. F., showing as a senior pig, and ready to farrow, was third in class, while a son, King Colonel, 154519, litter brother to the above sow, was champion boar of the breed. It is not often that a senior pig is able to defeat older boars for championship, but this was won under a judge who is one of the oldest and best known Duroc breeders in the central west. In 1916 a junior boar pig of Queen

Long Advancer

ved at the university farm, and continued to grow until she was past years of age. When her usefulness was at an end, due to an attack of milk fever after farrowing 16 live pigs, she was sent to San Francisco slaughter, and while in only moderate condition weighed 780 pounds. She was so much heavier than hogs usually slaughtered there that none of the gambrel sticks would carry her, and meat hooks were used. On March 14, 1912, this sow farrowed her first litter, ten pigs, and raised all of them. That fall at the fair this sow won first and champion Duroc sow and two of her pigs, first and second in the junior class. One of them, Queen of U. F., 336398, was reserve champion. In 1913 a junior sow pig out of Queen of U. F., named Queen of U. F. 3d, 248, was champion sow of the year.

of U. F. 3d was second in class and a sow pig out of Queen of U. F. 2d, 380246, a litter sister to Queen of U. F. 3d, was also second in class, being defeated only by the futurity winners in each case.

When it is taken into consideration that different blood was introduced through the boars, not all of which necessarily linked well with this line, and that it continues to produce show animals with clocklike regularity, the greatness of the transmitting ability of Long Advancer stands out conspicuously. Here is convincing proof that at least one champion female has also produced champions.

But this is only the show ring record. Probably no one sow's name is to be found in the pedigrees of so many foundation animals in new herds in this state and all of the sows but one in the university herd trace directly to her.

## Buying Your Foundation Herd

Written for California Cultivator By Mrs. L. M. Yore

IN this article which I have been asked to write I am going to write as if my readers were as I was when I first got into this hog game, as an unripe gourd upon the values of feeding, type and breeding. But I knew which hog I preferred, for I had tried out several breeds down in the valley on a ranch, and it was the Big White for me. The first thing to decide is your end, the type, and then whether you will raise for the market alone or for the selling of breeding animals too. There are always culls that will be sent to the block from any herd. Do not think that because a pig has won all the prizes in sight that he is the only thing, for there are many who never saw the showing and never will that are just as good, and prepotent to the highest degree in marking their progeny with their type and prolificacy. The sows should be of the same type as the boars, thus giving uniformity to your herd, and come of a long line of fruit-ancestors. Look well into the pedigrees of the animals out of which you are choos-

ing your foundation herd, not letting that of the boar outweigh that of the sows. It is said that the boar is 75 per cent of the herd, but I am only willing to grant him fifty-fifty, and in my opinion the dam stamps her type and qualities on the males of her litters, and the sire on the females of his progeny more particularly. It is so in the breeding of cattle and why should it not obtain in the result of mating hogs?

The high, long-bodied—all other points being equal—Chester White is my preference, as suited to this state's demands, and I am going to line breed to obtain it. We all know that every pig cannot come up to standard, out of each litter, and these can be turned into the pork-barrel as they fatten as easily as the finer pointed pigs, and in this way one can keep to the standard of his selected type. People say oftentimes that they supposed that when one had pure-breds that the hogs would be perfect in all ways and are critical of the pure-bred from this standpoint. In answer to this I always say that having animals which are bred for size and fruitfulness one can always bank on them to produce their qualities in

## LOUDEN STEEL STALLS

the majority of their offspring, the law of like producing like working in hog breeding as well as in other things.

Do not be satisfied that you are getting pedigreed animals, but see that pedigree and insist on having it for more than two generations back for both dam and sire, which the seller of fruitful stock should be glad to furnish. Then you can judge the prolificacy of the blood you are paying for and choose accordingly.

Line breeding should bring in hogdom as great results as have attended line breeding in bringing the Jersey cow and the Guernsey to their

high degrees of productiveness. It requires careful study and selection of the animals and mating according to the rule and time. Do not expect to achieve this without giving time, money, hard work and thought. The combination is needed in the hog business to bring about any degree of success, and success will never be attained in any other way.

The government is calling for more meat, and it behooves the hog breeder to get size, as we have the quickest maturing meat which can be made into so many palatable and nourishing foods, and the larger the hog the better.

## A Royally Bred Shorthorn Cow

Written for California Cultivator By F. F. Stonerod

The arrival of the great imported Shorthorn cow, Brandsby's Jinny 18th, on the T. T. Miller ranch near Los Angeles a few weeks ago rounded out one of the highest class herds of registered beef cattle so far established in California. She came with the last shipment of cattle purchased in the Middle West by Mr. Miller, two other shipments preceding this one.

44 weeks. Aristocrat 4th is the sire of Brandsby's Count 6th, winner first and champion at the Royal Manchester show, and champion at the Nottingham show, 1916. He sold a South American buyer for \$15,000.

On her dam's side Jinny is just as fashionably bred as on the sire's side. She herself won second prize at the Nottingham show last year, four

Brandsby's Jinny 18th

A full show herd will be taken to Sacramento, when fair visitors will have the opportunity of seeing a few of Mr. Miller's choice ones.

Brandsby's Jinny was purchased at a long price, to be exact, \$3100, but she was well worth it. She not only was a consistent winner in the English and Scottish showyards, but comes from a long line of ancestors which were of championship caliber. She was bred by J. M. Strickland, Yorks, England, and dropped May 20, 1914. Her sire, Brandsby's Aristocrat 4th, 114422, won first prize at Hastingwold and sold to Buenos Ayres, 1916, for \$12,200. His sire, Brandsby's Jolly Jill, won many prizes. His dam, Carrie, gave 8380 pounds of milk in

Royal Agricultural Society, third at Scottish National, second at Smithfield, where she beat the Nottinghamshire champion and the Scottish National reserve champion and was described in the Livestock Journal as the best Shorthorn in the 1916 London show ring. When Mr. Miller bought her she was in calf to Broadhooks Star, the noted English bull.

Individually Brandsby's Jinny is difficult to fault. She carries a wealth of thick, mellow flesh, has a remarkably smooth shoulder, beautiful top line and exceptional Shorthorn character. Certainly she will prove herself a valuable breeding matron in the Miller herd and will give a good account of herself in the show ring.

## No Lamb---No Veal?

By Fred A. Ellenwood, Secretary California Wool Growers' Association

ONE of the best statements we have seen as to the no veal—no lamb campaign is made by Secretary F. A. Ellenwood of the California Wool Growers' Association in a letter to Superintendent Allan Pollock of the dining car service of the Southern Pacific. He writes:

Having understood from various sources that it is the intention of some of our railroads to discontinue the serving of lamb, veal and certain other meat products on the dining cars of the various railroad systems of our country, under the assumption that this action would tend to conserve the meat food supply of our country, I wish to present certain facts from a practical standpoint in contradiction of this general assumption.

First, and most important, is the fact that the action suggested would lessen the meat production, instead of increasing it.

Second, such a movement would be unfair to the dairymen.

Third, it would be unfair to the sheep men.

Fourth, it will give the public an inferior grade of meat.

In further explanation of these statements I would respectfully suggest that the dairyman is in his business first of all to produce milk or butterfat, and not beef. The skim milk that he has is a by-product which he uses to the best advantage possible by feeding it to hogs, chickens or calves, or for such other purposes as he may deem profitable.

He has a given number of acres devoted to his business. This acreage he divides into pasturage for the summer months and for the production of feed for the winter. He has figured his business carefully and knows how many cows he can run under his specified area. His desire is to run the greatest number of cows

possible because the cow to him is his factory.

It was common practice when beef was low for dairymen to kill at birth bull calves, retaining only the heifer calves. As beef and veal became more valuable most of the dairymen sell the bull calves as veal, having utilized some skim milk in the veal production. If the dairyman is denied this privilege he would be forced to either sell his bull calves at a sacrifice to the man who would keep them to maturity, or if he kept them himself it would mean that he would have to decrease his cow band to the extent of the feed these calves would consume.

Another well recognized fact is that the dairy bred calf, such as Jersey, Guernsey, Holstein and mixed dairy breeds, do not produce, economically, good beef, and if kept for this purpose they must be run for one or two years longer before marketing to reach the proper maturity than the regular beef breeds. As a rule when a dairyman keeps bull calves they are half-starved and add very little to the beef production of the country.

The production of beef is a business of itself and should not be confused with the dairy business from which comes a large percentage of the veal of the country, and as stated above, this veal is a by-product of the dairy business. A comparatively small amount of veal is sold by the range cattlemen, and especially is this true if the prices of beef justify the retaining of the calves.

You are well aware that during a good part of the year in our own markets our quotations on veal are nominal. A good range calf today is worth from \$20 to \$25; a yearling, \$40 to \$45, and very few of these are disposed of as veal. The dairy veal calf usually sells for from \$10 to \$15, depending upon the length of time the dairyman has fed the calf skim milk, and the dairyman is the best judge as to whether or not it pays him to keep a few veal calves to maturity at the sacrifice of the number of his cow band.

As to the sheepmen's position, I would suggest that for the past several years the amount of lamb eaten annually by the public has been increasing very rapidly, due to two facts, first, because the people have discovered that lamb is among the most delicious of meats, and second, because the sheepmen have spent considerable money in producing and developing a type of lamb especially fitted for mutton, without so much regard for the wool.

These lambs are at their best when from five to seven months old. If for any reason sheepmen are compelled to keep these lambs until they are one, two or three years old the business becomes greatly crippled owing to the high cost of feed, labor and the other elements entering into the production of this mutton lamb, with the one result, that the production would be decreased, for it is costing in excess of 100 per cent more today to produce these lambs than a few years ago.

This particular branch of the business has been specialized in until it has become distinctive. The wool is considered a by-product; it is of a different character and less in quantity than this type of sheep. The Merino sheep, is used as a base, and by cross-breeding the mutton type is produced. The Merino is the wool producer, but the meat of the Merino is more strongly flavored and is not as desirable.

The mutton type is not profitable to run until one or two years old, as the wool would not justify, and after seven or eight months of age the mutton type of sheep becomes rough and as a mature sheep is not palatable as compared with the delicious, juicy lamb. Consequently the sheep grower would have to change his method of breeding entirely, with the result that the public would be denied the privilege of having lamb, for which such a splendid market has been created, and would be forced to eat tough, matured mutton of an inferior type. This change would consume several years and cost a large amount of money.

Our Western ranges have been greatly impaired by the homesteader and dry farmer, and consequently the number of sheep and cattle have been reduced. Each sheep man is running on a prescribed area, and, like the dairyman with his cows, he is endeavoring to run as many ewes as

possible, and it naturally follows that if he must keep the lambs to maturity he will be forced to run that many less ewes and, as stated above, will go back to the wool type of sheep rather than the mutton-producing breed.

I believe that I can show you that under the propaganda suggested the production in pounds of mutton would be lessened rather than increased. For instance, suppose these lambs were not slaughtered at five or six months old, but kept until fully grown; under present conditions these lambs dress from 25 to 38 pounds, but using for the purpose of this argument 36 pounds, because the writer has recently seen several thousand head marketed which dressed this amount in San Francisco at slightly less than six months of age.

If these lambs were kept for another year they would not dress more than 46 pounds as yearlings, making an increase of ten pounds of mutton, apparently, by having kept these lambs 12 months, from which gross amount you would have to figure a loss of from ten per cent to 15 per cent for deaths, and sometimes it runs higher than this figure in hard winters. If a man is forced to keep, say 1000 lambs, until some future time, then he will be forced to sell nearly 1000 ewes for mutton, because there is no place where he can increase the size of his flock.

If we were permitted to keep these ewes in place of the lambs, in the next 12 months each ewe would produce another lamb that would dress 36 pounds when it was six months old, so that the meat supply would be increased in the 12 months by 36 pounds. By keeping the lamb we would have disposed of last year when it weighed 36 pounds until the present time when it weighs 46 pounds, we have only added ten pounds to the supply, so by forcing the sheep man to keep his lambs until one or more years of age you will only add ten pounds to the meat supply, when you could have added 36 pounds.

In other words, the consuming public is 26 pounds of meat short by this system of operation, and the factor is always present that you are not giving the public what they want. Old ewes and old wethers are not palatable, and until the sheepmen developed the mutton type of lamb, mutton was a by-product with most of the sheepmen.

Another factor to consider is the fact the development of the mutton lamb has enabled the sheepmen to take advantage of many of the rough, brushy summer ranges which were heretofore unused and which are only suited for the grazing of mutton type of lambs, being unsuited for the grazing of the wool type sheep, as the brush pulls out too great a quantity of wool, making it unprofitable when a producer is running wool type of sheep.

It has well been said that this is a lamb eating age, but this does not mean that the number of sheep is being lessened because of this condition. When people eat lamb they do not eat beef, but if they are forced to eat aged mutton they would soon eat more beef. All these are economic matters which to a large degree adjust themselves better than they can be adjusted by force.

The cowman is not going to sell the veal if it pays him better to run it to maturity. The lamb producer is in the same category, and these various branches of the livestock business have been developed along the lines of supply and demand, not only in the application of the sale of the finished product, but under the rule of supply and demand of feed supplies, which also enter into the question in the production of this commodity, as well as in the sale of it.

If the stockman is going to be forced to keep his young stuff to maturity, either he or someone must supply the necessary feed and, as urged above, the result would not be the one desired by our government. Practically every spear of feed available is being utilized today; compulsory methods regulating the method of production might result disastrously unless a very clear understanding of the matter is had.

My purpose in bringing this matter to your attention is that I realize that you are desirous of doing what seems best, not only for your company but for the country as a whole, and that you are a practical man in your business, the same as I am in mine.

## National Forests Helping Increase the Meat Supply

**A**s a war emergency measure the national forest ranges are carrying this summer approximately 100,000 more cattle and 200,000 more sheep than in ordinary years, according to the grazing experts of the forest service. Ordinarily the national forests furnish pasturage for about 1,800,000 cattle and horses and 7,800,000 head of sheep.

The number of livestock permitted on the forests is limited in order to prevent damage to timber growth, water supplies, and the range itself. This year exceptional weather conditions combined with the general food situation to create an unusual emergency, calling for special provisions to take care of the stock. A severe winter and late spring exhausted the hay supply and forced use of the spring ranges before they had reached their normal state. To lessen the losses which the western livestock industry faced the national forest ranges were opened early. At the same time the number of stock permitted for the present season was raised to the maximum consistent with safeguarding future productive-ness.

It is fully recognized that the increases which have been made in the allowances of stock on the national forests involve danger that the range

will be depleted through overgrazing, but it is believed by the grazing experts of the government that the emergency increases made can be taken care of, at least this year, without material sacrifice of productive capacity. The condition of the ranges is, however, being carefully watched. Reliance is placed also on the special efforts being made to secure the most intensive utilization consistent with sustained productiveness by improved methods of handling the stock. Better salting methods and the development of new watering places are among the means employed for this purpose.

At the close of the grazing season a careful examination will be made of the range on each forest to determine its condition and to find out how many cattle or sheep it will support next season. On areas which are found to be overgrazed an attempt will be made to shift the surplus stock to range which can stand the strain better.

While the grazing officials do not think that the increase could be carried indefinitely without serious damage to the forage, regulated grazing has brought about a steady improvement of the range, and some areas will probably be able to support the larger numbers permanently.

## Silos Conserve Feed

**T**HE silo is the greatest feed saver known to farming. An acre of corn fodder put into the silo has more feeding value than an acre of corn whose stalks have been stripped of its ears and fed with the meal made from the dry corn. There are several reasons for this. One is that in putting corn into the silo none of it is wasted. The whole corn plant, except the roots, goes in, and when it comes out it is so palatable that the cattle, horses and sheep just cannot leave it alone until the last vestige has disappeared.

Another economy in the use of the silo results from corn being stored at a time when it contains the greatest amount of nutrients per acre. Then, after the fodder is in the silo, it goes right on getting better. It becomes even more palatable than the

corn was before being ensiled, tasting so good in the ration that the cow or steer does not mind particularly if some of the other feeds are somewhat dulling to the appetite.

In the labor saved lies further silo economy, which is of great importance now. It takes no more labor to put an acre of corn in the silo than to shock, husk and shred it; but the product is more valuable.

Rats and mice cannot eat the corn that is in the silo, nor wind and rain decrease its feeding value.

In many sections the filling season is very close at hand, and quick action will be needed if a silo is to be put up this year. Every fall sees a rush for silo materials at the last moment. The rush will be greater than ever this year on account of the feed shortage.

## How to Tell How Much Silage You Have

**H**ERE is a table from Bulletin 59 of Wisconsin experiment station which shows the average weight of good corn silage at different distances below the surface of the silage and the total weight to those distances two days after filling:

Depth of silage—feet	Weight per cubic foot of silage at different depth—lbs.	Total weight one square foot area to depth given—lbs.
1	18.7	18.7
2	20.4	39.1
3	22.1	61.2
4	23.7	84.9
5	25.4	110.3
6	27.0	137.3
7	28.5	165.8
8	30.1	195.9
9	31.6	227.5
10	33.1	260.6
11	34.5	295.1
12	35.9	331.0
13	37.3	368.3
14	38.7	407.0
15	40.0	447.0
16	41.3	488.3
17	42.6	530.9
18	43.8	574.3
19	45.0	619.7
20	46.2	665.9
21	47.4	713.3
22	48.5	761.8
23	49.6	811.4
24	50.6	862.0
25	52.7	913.7
26	52.7	966.4
27	53.8	1020.0
28	54.6	1074.6
29	55.5	1130.1
30	56.4	1186.5
31	57.2	1243.7
32	58.0	1301.7

33	58.8	1360.5
34	59.6	1420.1
35	60.3	1480.4
36	61.0	1541.4

Hoard's Dairyman explains how to use this table, as follows:

"Assume a problem. A silo containing 21 feet of silage after settling has been fed down until only 8 feet remain. Silo is 16 feet in diameter. How much remains?

"The weight of one square foot to a depth of 21 feet is seen from the table to be 713.3 pounds. If 8 feet remain, 13 feet have been fed. The weight of 13 feet is found in the table to be 368.3 pounds. Subtracting this from 713.3 leaves 345 pounds which equals the weight of the 8 remaining feet. Multiplying this weight by the number of square feet in the area will give the number of pounds left in the silo. The area of a 16-foot silo is 201 square feet; 345 times 201 equals 69,345 pounds, or 34.6 tons. Dividing the number of pounds by 2,000 gives the number of tons. To obtain the area of a silo multiply the square of the radius in feet (one-half the diameter) by the factor 3.1416. For example, a silo 18 feet in diameter has a radius of 9 feet; 9 squared is 81. Multiply this by 3.1416 and the answer is the number of square feet in the area."

Cochise County, Arizona, is holding a series of picnics and "motorcades." We are not fully conversant with that word but it seems it means a series of trips in motor cars to various orchards and farms, in which cultural methods are discussed.

The annual report of the British Berkshire Society for 1917 has just been received in this country. The book contains 30 pages of matter touching the activities of this registry association in its different lines of work. Some of the prize-winning Berkshires of England are illustrated and a complete list of Berkshire swards at the leading fairs is given.

On many hog farms it has been found good practice to establish temporary feeding places in the pasture or field so that the manure will be deposited where most needed. This may sometimes cause a little extra labor in feeding, but it saves both the old and liquid manure and reduces the amount of filth about the barnyard and minimizes the danger of disease.

## ECONOMY STOCK POWDER

### For Hogs, Cattle, Horses and Sheep

Economy Stock Powders are not a stock food, but a medicine; not a panacea, but a remedy; not a medicated salts, but a purely medicinal compound, composed of the very best and choicest of herbs, roots and sodas; not a cure-all, but a genuine conditioner, composed of ten different ingredients, scientifically compounded. No oil meal, no bran, no salt, no mill sweepings, no cheap filler, no poisonous or harmful drugs or stimulants, such as Arsenic and Black Antimony, that will create a false appetite. Economy Stock Powders are as carefully compounded as a doctor's prescription in a drug store.

It will keep your hogs free from worms, build up the constitution. It will also pay you in more pounds of fat out of the grain fed. It's like writing insurance on your herd against disease, as it purifies the blood, sweetens the stomach, expels and destroys all germs, worms and parasites, and it keeps your stock in a healthy condition. It stands in a class by itself—an honest article, which has been proved by the business that we have built up.

Over 200,000 Farmers and Stockmen are Feeding Economy Regularly.

#### To the Dairyman

Economy Stock Powders will give you an increased volume of milk, and will keep your dairy cows in better flesh. The reason for this is that the stomach is sweet, the digestive organs are in a healthy condition, the fever suppressed, and a good pond of digestive fluid is made, so that the food consumed is thoroughly saturated, thereby giving the best results from the food.

**FREE** 36-page book and a liberal supply of Economy Stock Powder to make a thorough test — free. The book contains valuable information on livestock diseases, such as Lumbercold, Lung Worm, Thorn-headed or Bobkin Worm, Whip Worm, Pin Worm, Kidney Worm, Typhoid Pneumonia, Spleen Fever, Swine Plague, Indigestion, Coughing, Thumps, Paralysis, White Scours, Cholera, etc. You will also find valuable information on feeding.

Economy Hog and Cattle Powder Company  
527-28 Hearst Bldg., San Francisco, Cal.

## Famous Jerseys Imported by Humboldt County Nurseryman

Breaking the world's dairy record is some ambition, even for California, but up in Humboldt County there is a nurseryman who proposes to perform the barnyard miracle. As a starter he has captured the best stock that money can buy. Among the recent high-bred arrivals on the C. W. Ward ranch near Carlotta is no less a prize than Dosoris Park Golden Lassie, distinguished daughter of Dosoris Park Lily, the world's record Jersey cow. Golden Lassie was going at nearly a thousand-pound gait while on test previous to shipment west a few weeks ago. She is now running along nicely at a high rate in her Humboldt home. If she does not succeed in surpassing all existing milk and butter records it will not be for lack of scientific care and ideal dairy conditions. Her advent has an important bearing upon Humboldt's already notable standing as a dairy section, that county ranking third among California's 58 in dairy products. It is a Jersey and Guernsey stronghold, as the climate is very similar to the Channel Islands, where these breeds originated. Several herds of grade cattle there are producing from 300 to 400 pounds of butter per cow each year. The present year has been a record one in this state in the number and variety of pure-bred livestock added to her herds.

Before going East to spend several weeks and a considerable fortune in collecting one of the best herds of Jersey cattle in the United States, Mr. Ward purchased after careful selection a large holding especially adapted to his purpose, and erected ample, modern, practical buildings, including milking barn, test barns, bull pens, etc. He even provided a spur from the main railroad line into his property. Then he went to Waterloo, Iowa, where he finally persuaded Professor Hugh G. Van Pelt—long recognized as a high authority on judging and breeding—to part with the choicest of his Jerseys, at a price as long as the Van Pelt string. Prof. Van Pelt for years has been demonstrating the doctrine of capacity, conformation and breed type, and the animals secured by Mr. Ward are splendid samples of the ideal type representing the professor's skill.

In addition to the Van Pelt and

Pratt cows, Mr. Ward purchased a string from W. R. Spann of Shelbyville, Kentucky, and another bunch from Edmund Butler of Mt. Kisco, New York, the remainder of the 52 head being secured in and around Waterloo from the best herds. He also brought out to Humboldt W. F. Merriam, formerly herdsman for Mr. Van Pelt, and Philip Preston, a Cornell boy, to care for the cattle. Official test work will be conducted and the average of the butterfat production of each animal raised each year until it is second to none.

The Ward Jerseys are mostly Financial King, San Alois and Blue Belle and Interest line, bred with a sprinkling of Golden Fern Lad and St. Lambert blood. Noble Lorne Financier, 124737, by Noble Lorne Count, and out of Adelaides Countess, the queen of the Van Pelt herd, is a dark, solid colored three-year-old who should return interest on the heavy investment Mr. Ward made in him. He is also a show bull.

Cannons Gambage is another young sire from which high producing females should result. His rudimentaries are exceptionally large and well placed, and he is of fine quality throughout. His dam, imp. Gambage Colleen, has a 722-pound butterfat record.

One of Mr. Ward's best prospects for a record-breaker as a full aged cow is Financial Buttercup Noble, who at three years of age is now on test and at seven months has produced nearly 300 pounds of butterfat. She has a big barrel, velvety skin, straight top line and a large well-placed udder. In fact there is not a single animal in the Van Pelt herd from which Buttercup came that could be faulted in this respect.

Another promising young cow is Financial Majestic Fairy, 235392, a February, 1915, heifer due to calve shortly and bred to Financial Fern Noble.

Space does not permit going into detail as to the breeding and individuality of each animal in this herd. It is sufficient that other Jersey herds in the country will have to make some big Jersey records to better the Ward records, once the animals get fairly started. This herd will prove a big asset to Humboldt County as well as to the state of California.

## Consolidated Herds

The Moorland herd owned by K. W. Abbott of Milpitas is to be shipped to Ripon to be developed by Gotshall and Magruder together with their Karlay herd. Mr. Abbott has tendered his services to the government during the period of war and while he is away he has asked Mr. Gotshall and Mr. Magruder to care for his stock for at least a period of two years.

In joining together these two prominent herds it will make a complete herd of registered Holsteins that have no peer on the Pacific Coast. The Gotshall & Magruder herd consists of more than 60 females and the Abbott herd of nearly 30, which will give the leading sires of these breeders the opportunity to which they are entitled.

Colantha Sir Pontiac Aaggie, the already famous Moorland herd sire, is a son of Colantha Johanna Lad out of the good dam, Aaggie Cornucopia Pauline 3rd. The three nearest dams of this sire have an average butter record for seven days of better than 30 pounds. He has 14 daughters that have qualified in the advanced registry and one of the three year old daughters, Moorland Johanna Haskins, recently made under the care of Mr. Abbott a very good record of 32.87 pounds of butter in seven days.

King Pontiac Ormsby Segis is the young sire owned by Gotshall and Magruder and is wonderfully bred insofar as he is a son of a 31-pound cow, the grandson of King of the Pontiacs out of one of the King's best proven sons. This young sire of Gotshall and Magruder is producing some very fine looking calves and as we find that the dam and sire's dam have an average test of 5.09 we have no

hesitancy in placing him as one of the coming sires of California.

One of the interesting animals to see at the Gotshall and Magruder ranch is K. P. Toia Joe the state record two year old who has completed her record this last May making 27.14 pounds of butter in seven days.

Gotshall & Magruder are constantly doing official testing under the very capable management of their herdsman, Mr. Keel.

### WHEN TO CUT SILAGE CORN

One of the few cases where a man had better be too late than too early is in the time of filling the silo. By all means avoid cutting silage corn too early. Silage from immature corn turns sour, is less palatable than when properly made, and has lower feeding value.

Best results are obtained by commencing to fill while the leaves of the upper part of the stalks are yet green, but not until the kernels are distinctly dented, in dent varieties, or considerably hardened in others.

When silage corn is so dry that the cut fodder does not feel moist as it is squeezed in the hand, water should be added at filling time. This can best be accomplished by turning a running hose into the blower. The amount of water to be used will depend on the rate of filling. Aim to make the cut fodder moist enough to pack down solidly.

Farmers who are making their first use of silos this fall in order to save all they can of the short feed supply, will do well to give close attention to the matter of cutting the corn at the proper time. An error then may mean feed wasted instead of feed conserved.

### BRITISH MEAT PRICES

By Frank D. Tomson

**A** LETTER, received by John Clay from his brother A. T. Clay, Edinburgh, Scotland, appeared in the August 9 issue of the Livestock Report and throws light on the present meat market in the British Isles. For convenience the British values quoted by Mr. Clay have been reduced to their American equivalent. The letter reads:

"The government here, as you know, has been for some time restricting the price of foodstuffs and is contemplating doing the same with meat. The only result so far seems to have been to make meat go up so high that ordinary people can hardly buy it. I understand an order will shortly be issued commandeering so many cattle in each district per week or per month. I have just had a talk with my butcher who tells me that he bought bullocks in 1914 at \$106 and the same class of bullocks he bought this week cost him \$330. In 1914 sheep were costing him \$12 and today they are costing him \$36. In 1914 beef was \$9.60 per hundred weight (112 pounds). Today it is selling freely at \$26.40. Roast beef here today is selling at 44 cents per pound or over it, and mutton just about the same. Chilled meat coming from America is being sold to the public at about 30 cents per pound."

The several United States Shorthorn breeders who have imported Shorthorns from the British Isles this past season were obliged to turn back all animals that in the judgment of the British authorities had been purchased too close to the beef value, a ruling having been put into force prohibiting the exportation of meat animals unless there existed a decisive margin between the selling price and the beef value. A number of purebred herds have been disposed of by their owners for beef purposes as the present values for killing purposes seemed sufficiently attractive.

It seems reasonable to assume, in view of the condition prevailing in Britain and which can scarcely fail to be emphasized in this country, that the producer of beef cattle has every encouragement to continue and expand his operations. The use of the registered sire will have the effect of increasing the number of pounds per head and shorten the period required for development. These are items that the cattle grower is obliged to consider in view of the increasing cost of maintenance.

### HEALTH OF COLT DEPENDS ON CARE

Navel disease which infects colts soon after foaling can easily be prevented by providing clean and sanitary stalls for the mares. The disease is easily transmitted from old bedding, sawdust or barnyard scrapings. Only clean and new straw should be put in the stall and a strong solution of iodine kept handy for bathing the navel cord of the colt. The first milk of the mare contains colostrum, a natural laxative, and is essential in keeping the young colt in good condition; therefore, mares should not be milked before or soon after foaling. In a few days - both mare and colt can exercise in the pasture lot.

### DIRTY CALF PAILS CAUSE SCOURS

The farmer who uses the swill pail for feeding calves or who hangs the pail on a post between feedings without washing it will soon be looking for a cure for calf scours. The dirty calf pail is one of the chief causes of scours, according to L. W. Wing, Jr., of the Missouri college of agriculture. With the fly season and warm weather at hand extra precautions must be taken in caring for the calf pails. They should be washed thoroughly after each feed and sterilized either with steam or hot water. After the pails have been sterilized they should be inverted in a clean protected place until time to use them again.

Take the sow away from the pigs and not the pigs from the sow. In this way the pigs will be left in their accustomed lot and will be less likely to notice the change in their living conditions.

It doesn't pay to feed scrub cattle on high priced feed.

# ROSELAWN STOCK FARM

## Registered Shorthorn Cattle

After seeing our Exhibit at the State Fair Grounds, Sacramento, you are invited to visit the farm and inspect some choice young Bulls and Heifers we offer for sale. They are sired by bulls of national reputation, such as Ringleader, Gibsons Goods, and Roan Victor.

An Hour's Ride from the Fair Grounds

WOODLAND, YOLO COUNTY CALIFORNIA

HENRY M. ELBERG, Mgr.

# KING PONTIAC ORMSBY SEGIS

HIS dam, Christeria Overton Mechthilde, made 31.70 pounds of butter from 463 pounds of milk in seven days.

HIS sire, King Potiac Netherland Segis, is one of the wonderful sons of the greatest sire of the breed, King of the Pontiacs.

HIS dam and sire's dam have an average test of 5.09.

HIS blood makes him one of the foremost sires of the coast.

HIS story is a great deal longer and we will gladly tell you more.

HIS future is bright, as he is being bred with over twenty A. R. O. cows and with some of the most wonderfully bred heifers in the state.

## Resume of Livestock Affairs for the Current Year

Written for California Cultivator by F. F. Stonerod

WITH the opening day of the 1917 California state fair at Sacramento the banner year of the livestock industry of this state will have ended and a new year be ushered in. We do not know what the coming 12 months holds in store for the producer of meat animals and their by-products, but we do know that so many things of import have occurred during the past year that they will bear repetition at this time.

After the most successful series of state and county fairs yet held in California stockmen turned their attention to the national shows, the cow testing season, new breeders' organizations, state dairy cow competition, etc.

Probably the greatest single achievement of the year was the sensational winnings of the Davis experiment station cattle and sheep entries at the Chicago International. Capturing both the grand and reserve grand championship prizes for steers at the greatest stock show in the world was no small honor, and it certainly advertised California as it had never been advertised before.

Shortly after the holidays the agitation for better organization among the producers commenced. The state swine growers held a large and enthusiastic convention in Los Angeles to discuss the pressing pork price question. The results of this convention were far reaching and a better understanding between the packers and the growers was reached. Then the beef men in the central district of the state organized, the sheep men got busy, farmers formed local marketing associations, and as the months passed by the producers saw the wisdom of their cooperative methods. If war conditions did nothing else than to awaken the California producer to a better understanding of his obsolete methods, they were worth the price.

Later on the dairymen caught the

fever. High prices for feed stuffs, acute labor trouble, etc., forced them to organize if they were to exist. At the present writing this organization is almost completed and gaining strength daily, and in the meantime prices for dairy products have been increased. The matter of public stock yards has been the biggest disappointment of the year, and while it was widely discussed for a time, the order buyer still travels up and down the state taking his pound of flesh, and the grower who spends time and money fitting stock for market has the satisfaction (?) of receiving from three to five cents per pound less than his fellow stockman receives in other states. Possibly the federal trade commission can tell us the reason for these things after it completes its investigation of the big American markets. Certainly it has been a long time coming in this state, I mean the competitive buying of meat animals.

Los Angeles made elaborate plans to hold a big 30-day fair and livestock exposition, but had to postpone the 1917 show until next year, or, as the resolution read, "until a more propitious time." War, mobilization of troops, with a possible shortage of cars for transporting exhibits, and business conditions were the prime influences which caused the postponement of this show. The time is here for annual shows at both San Francisco and Los Angeles, as the size and importance of the livestock industry in this state deserves all the support and recognition possible. Any thing that will increase production of meat animals and their kindred products, or that will educate the producer to improve his breeding stock is urgently needed, and the livestock show is one of the best known mediums to accomplish this end.

By and large the year 1917 will be a period whose advancement in agricultural affairs, especially in California, will be of lasting good to this commonwealth.

## Preventable Losses

AT the special meeting of the Amador-El Dorado Livestock Association held some time ago at Placerville Dr. H. J. Hammond, of the bureau of animal industry of the Department of Agriculture, spoke of the connection of the department with the industry in part as follows:

For 50 years the department of agriculture has been studying how to increase production, but only recently have we been endeavoring to make that production profitable. The farmers have formed various organizations with a view of getting more for what they produce.

The creation of the office of markets and rural organization in 1913, by legislation, is an epoch making innovation. The farm loan act is of much value to the producer for it provides capital, with easy payments, at a low rate of interest. The bonded warehouse act is beneficial in giving farmers a chance to get money at a low rate on their stored produce, which is a gilt edge security. All these help toward preventing losses in livestock by providing money to purchase feed when it is scarce and your produce may not have been harvested or at a time when you desire to hold for a better market or more favorable transportation.

There are two slogans to be remembered "Bury the dead" and "Care."

### Texas Fever Tick

A little care at the proper time will prevent much of the loss in your herds beside enabling them to withstand severe climatic changes. In discussing preventable losses we mean such losses as can be provided against economically. In the southern states the loss from the Texas fever tick is credited with being a menace to the livestock interests to the extent of \$50,000,000 annually. In this connection it is said that within a few years the tick will have been eliminated in this country, and the South will become an important cattle country. Already

where ticks have been eradicated pure bred animals are being purchased in large numbers, and the crossing of these animals on the native cows has produced excellent beef animals at a cost much less than can be done on the western range. So you see livestock centers may be changed and a country make wonderful progress by the elimination of one preventable cause.

Contagious abortion, shipping fever of cattle, anthrax, blackleg and a few other diseases in cattle may not even be entirely eliminated, but much of the loss due to them can be lessened.

### Tuberculosis

Tuberculosis you are more or less familiar with, but most stockmen do not realize that through the milk of the cows kept on the ranch, that appear healthy, may be passing the germs in the manure which soils the tail and udder and drops into the milk bucket, and then is conveyed to the children of the family. In controlling the spread of this disease, it seems the most practical method is to prevent its introduction to the herd by purchasing only tubercular free animals, especially pure bred bulls. Raw skimmed milk fed to hogs, especially from creameries and other sources, is very dangerous, as one infected cow in a locality may spread the disease to several herds. Get a government bulletin on tuberculosis and you will be surprised at the simple practical methods that will prevent the spread of this disease to your herds and your family. Anthrax and blackleg are also destructive, but you are able to see them at work in your herds; not so with tuberculosis.

### Anthrax and Blackleg

At present, reliable and effective vaccinating preparations are available to prevent both anthrax and blackleg. The vaccination of cattle for anthrax cannot probably be arranged so that a method for the use of such a preparation could be distributed to the stock owners as is blackleg vaccine. Therefore where anthrax is known to

**G. A. Murphy - Perkins, Cal.**

exist it is advisable to procure the services of a reliable veterinarian and vaccinate your animals against this disease. This is such a deadly and dangerous disease that all animals that die from it should be burned where found and no attempt made to skin or move the carcass. The spores of this disease will remain virile for years in the soil.

The bureau of animal industry has sent out 5,000,000 doses of vaccine during the last year. A letter, telegram, telephone or any means that will inform my office as to how many doses and where it is to be mailed to, will bring you blackleg vaccine free, with instructions how to use it.

### Docking

To the sheep owners: In docking your lambs you have been using a sharp knife. Every lamb loses probably one-half pint of blood, and this means one pound of lamb. Two thousand lambs less 1000 pounds is money you are losing which can be prevented. I have given the hot docking iron some attention and can safely say the old method should be abolished.

### Dipping for Ticks and Lice

We all know what scab meant since your flocks have been freed from the disease. We are facing the problem of another parasite that is gaining a considerable foothold in this state. I expect it will soon be necessary to compel the dipping of sheep infested with sheep ticks.

There is one more point that is very important in this connection, and that is the dipping of rams. By dipping the bucks you will prevent the possi-

Creamcup Pontiac Pietertje 103911  
A fine one owned by M. M. Holdridge

bility of the introduction of many external parasites and thus prevent financial losses as well as maintain a stronger animal, which means more lambs and more wool.

In this connection I believe it can be shown that the dipping of cattle for lice is a profitable investment. A lousy animal is not a thrifty one, and the lice will not leave until the animal sheds or the sun becomes quite hot. All this time the animal is feeding an unwelcome host.

The bureau is conducting experiments with external parasites, and as soon as we are able to learn the life history of a particular parasite we are in a position to take measures for its eradication. Considerable work is being done at the large stockyard centers in dipping animals that go out to feed stations or to farmers. In a time like the present, with our country at war and the high prices, it becomes necessary that we conserve our resources.

We have agricultural advisers who advise the farmer on almost every subject that pertains to his business, and I have often thought it might be a good idea to have a livestock adviser for the stockmen who do very little farming and devote all their attention to livestock, as in many of these mountain counties there is not sufficient agricultural land to justify the employment of a farm adviser.

The bureau of forestry has been a valuable factor in helping your industry. One of the most important suggestions has been the blanket method of herding sheep. I would urge that you look into the method of your employe before condemning the system.

Do not let the pigs wean themselves. Take the sow away from the pigs when they are about ten or 12 weeks old and give her next litter a fair start in life.

# ANNOUNCING Our New Herd Boar

## JOHNSON'S DEFENDER

Sire, Conway's Defender, by Defender. Dam, Choice Belle, by Fancy Crimson Wonder.

Picture was taken at the age of ten months. His bone measured seven and three-quarter inches at this age.

We are mating this boar to Our Critic, Cherry Chief King's Col, and Defender sows for spring litters.

Entirely sold out of sows and gilts at the present time. A few choice March and April boars for sale.

See our herd at the State Fair. We will show Johnson's Defender, not highly conditioned, but in just good growing condition.

## The Time to Buy Beef Cattle

Written for California Cultivator By F. F. Stonerod

AR-SEEING cattlemen are not discouraged, by labor conditions and high prices of feed this year and not tempted to sell off their breeding stock, but are conserving every cow that is a possible calf producer and buying the best bulls they can secure regardless of price. They see devastated Europe bidding for foundation stocks to replenish depleted supplies, South America in the market for American beef, America herself running far behind consumptive demand, and a period of reconstruction world-wide in scope which will take every meat animal of breeding quality which can be raised for a generation. Does the breeder or layman ever consider the fact that increased acreage of grains and grasses brought about by abnormal wartime necessity will mean an abundance of cheap feedstuffs after the war is over? Demand will certainly prevent a return to starvation prices to the producer, and it requires but a few minutes with paper and pencil to figure the sure profit in feeding cheap feeds to high-priced beef.

The wholesale liquidation of cows and calves during 1916 is one of the most serious economic problems which confronts America today. Stockmen, lured by the record prices offered by the killers, rushed stuff off to be slaughtered without a thought of the future. The result was an unprecedented run of half finished beef because the feeder was afraid that prime weights could not be secured with high priced feed, in other words he was playing both ends against the middle.

Much speculation has been indulged in as to when the unheard of prices for purebred beef cattle would reach their pinnacle and start the downward trend. Predictions were made all year that the bubble would burst and

leave purchasers of top priced animals with an elephant on their hands so to speak. But the bubble refused to burst and the hundreds of fall sales in the Middle West will in all probability average up with the ap sales.

Here in California and the Southwest conditions are different. This is the great range country, country which turns off more than per cent of the American beef supply annually. Rangemen who have been accustomed to paying \$100 for a yearling are slow to see the advantage to be gained by paying \$200 and \$300 for Spring yearlings weighing 350 pounds or more by poor bulls and those weighing 550 pounds out of good bulls. More than the price difference is the breeding stock. This is the primary reason why California breeders registered beef animals have more or less discouraged in trying to secure a fair price for their bulls. Nowhere else in the country, can a buyer call at a breeding farm and pick up a bull of serviceable age reasonably as he can in California. That the rangemen have not taken advantage of this condition does not speak well for their business acumen. It was the chance of a lifetime to get a supply of good bulls at a little more than beef prices, and yet the average cattleman will sell the same kind of light-boned, featherweight cattle in a spring that he has been selling for a decade. The day of cheap range beef is rapidly passing, and herein lies the wisdom of increasing our purebred herds at any price. Those who speculate at the men who have invested their money in establishing breeding herds at a time when they cost more than at any time in history will live to see these same men clipping coupons as a result of their faith in the future of the beef cattle industry.

## Economic Treatment of Farm Slaughtered Animals

By J. C. Marshall, Inspector of Stock, Victoria, Australia

PROBABLY one of the greatest losses the grower suffers is due to bad skinning or flaying, especially in the case of cattle hides. Knife marks, cuts, ragged edges, and bad shape, together with the fact that they occasionally reach the market in a putrid condition, always spell loss, and many thousands of pounds annually are lost from this cause.

In the flaying of large or small cattle the proper opening up of the carcass is all important, as the ultimate shape of the skin or hide depends on this operation. Probably one of the best methods after sticking and carefully pumping the animal is to skin the head and then put the carcass on its back and prop it in that position by means of a pritch or blocks. Open the skin from crutch to neck in a direct line. Remove the fore feet at the knees and the hind feet at the hocks. Open the skin at the inside of fore legs to the point of the brisket and at the hind legs from hock to scrotum. Always skin tail and leave about six inches of it on the hide. Should the tail be cut out with the skin attached to it, not only a most valuable piece of hide from the butt is lost, but, further, the shape of the hide as a whole is spoiled. The dressing is accomplished by means of a good sharp butcher's knife, saw, and chopper. In flaying one of the main factors is to hold the skin up tight with one hand and drive or thrust the knife with the other. This is done by forcing the knife between the hide and the flesh per medium of the panniculus or "felm." After opening the carcass out on the ground and skinning well down each side, saw through the brisket and aitch. Hang up carcass and finish skinning; after removal of stomach, entrails, and pluck, saw or chop down evenly through the back bone. Use as little water as possible for cleansing, and make sure that it, as well as the cloth used, are clean. After washing the hide free from blood and debris, sprinkle well, espe-

cially at the edges, with clean coarse salt. Fold it up by throwing in side to center, then neck and tail end, and roll up. Efficient, clean and quick salting is necessary, as many putrid "farm" hides reach the city slaughterhouses. Farm-stored hides should be laid away flesh side up in shallow concrete pits, and treated well with clean salt. They will there maintain their own brine, and will keep ready for market, when they may be rolled up. It should be remembered that clean hides fetch more than dirty hides.

### Dressing Calves

In dressing calves for farm use the simplest way to bleed the animal is to lay it on its side and with one cleaver cut across the neck sever all the blood vessels. Next hang up carcass and by slitting the skin from crutch to neck and ringing about the tail open belly carefully, so as not to puncture the intestines. Remove entrails and stomach and split down brisket, then remove pluck. Use no more water, clean than is required. It is not necessary to completely skin the calf at time of slaughter, as portions can be skinned as the veal is required for use, especially in the cool weather. A portion of the stomach of the calf not ordinarily saved by farmers is in demand just now. This is commonly known as the rennet or veal from which the calf rennet extract is derived. It is the fourth stomach of the calf and is sometimes pickled in strong brine of salt and water and the agent employed to convert milk into curd for cheese making. Owing to the present war conditions, the ferment usually employed has risen considerably in value and there is now a keen demand for calf rennets.

The Victorian government cheese expert advises all country calf-killers to save the veils and recommends the following method for procuring and preserving them. After disemboweling the calf lay stomachs and intestines out on a clean board or table and cut away the intestines a few

ches from where they enter the stomach. Separate the fourth stomach from the others and squeeze out contents, but do not wash out. Fill vells with coarse salt and allow to dry. After drying shake out superfluous salt and pack away in small barrels or sprinkling salt between the layers. Another method is to blow up and tie the open ends and allow to dry after the fashion of bladders, but must be exercised to prevent them from being fly-blown.

#### Processing Sheep and Lambs

The knife is not used all the time removing the sheep skin or lamb skin. After "legging" the animal, that is, clearing around the head, knuckles and hocks by means of the knife, turning up, split the skin from pelvis to neck and use the fist and elbow to move the skin. It may be necessary to use the knife a little to clear around the tail. After a few trials it will be found that the pelt will peel off easily. Sheep skins should be hung fleshy side up in a shady, cool place to dry. If it is necessary to keep till several are available for market, paint with arsenical solution to prevent attacks by weevils.

#### Processing Pigs

Probably the most important feature in farm pig killing is in regard to the scald. It is well known that the scalding water be too hot and the hair sets and the cleaning process much prolonged and the work generally badly finished. The sticking operation can be carried out in several ways and care should be exercised not to "shoulder" the animal. Shouldering the pig the knife severs part of the blood vessels in the neck, instead of going into the chest cavity it slips along the outside of the ribs and enters the shoulder, where blood clots lodge to the detriment of the meat. Small pigs may be held in sitting position and then stuck. The knife should be driven in the neck in front of the breast bone, towards the heart, making a deep but small incision. Large pigs must be thrown on their sides and stuck while in that position. Pigs may be scalded in barrels, or tanks, according to the number and being slaughtered at a time. If possible, enough water could be used to nearly cover the animal, and the temperature of the water should be between 140 degrees and 150 degrees Fahrenheit; this heat is obtained by using two parts of boiling water to one of cold. Place the carcass in the tub or barrel and keep it moving as much under water as possible. The tail, ears and feet are first. A few well-directed strokes with a scud or shovel should, in the case of a porker, remove nearly all the hair. The animal ought, if possible, to be finished off in a tub of cold water. If the scald has been a good one very little shaving is required. Hang up and wash with cold water and brush in order to finish the beast prior to opening. The evisceration is done in similar fashion to that suggested for sheep and calves, but care is required to make a neat job of splitting the breast bone. Hang carcass in a cool place out of the wind, so that a good color may be obtained. If the pig is a large coner or chopper, it is advisable, less in very cold weather, to split the carcass immediately after slaughter and remove all internal fat and lean, including the fat attached to the kidneys and aitch.

#### Good Saving

Blood from farm-slaughtered animals is usually lost. All animals for human use should be bled on the same spot and a small cemented pit at the end of an impervious drain used to catch the blood. This may be saved in various ways and put to many uses on the farm. It makes a highly concentrated nitrogenous manure and is well suited for kitchen or flower garden. A good method of dealing with it is as follows: Collect the blood from water and boil, and then spread out on a clean marly patch or ground to dry in the sun. When dry it may be gathered with some of the marl and stored in bags and used as required.

For poultry food the blood should be collected fresh, and after boiling spread in the sun on sheets of iron. It is then be powdered and stored for use. This should be fed sparingly to birds.

Although rarely used for human food purposes it may be so employed.

Healthy pigs' blood is the best for the purpose. The animal should be bled into a clean dish and the blood immediately stirred with a wisp of twigs to remove some of the fibrin, and thus prevent clotting. It may then be mixed with oatmeal, boiled barley, rice or flour, and after seasoning filled into pig casings or sheep and ox bungs to make the various kinds of blood puddings.

#### Edible Fat

In order to get the best results from beef fat for table and cooking purposes, it is necessary to treat it while quite fresh. All beef fat and trimmings, including the caul fat, should be saved clean, sliced and put through a household mincer. The minced fat should then be warmed in an oven at a temperature not exceeding 150 degrees Fahrenheit. This will melt the bulk of the fat. The balance can be rendered at a higher temperature, but care should be taken not to mix the two melted fats, as that which melts at the lower temperature will be found to be of better quality, especially for table purposes. All the rougher fats, whether beef or mutton, may be rendered into tallow after washing clean and cutting into small pieces. The temperature should be much higher for tallow rendering than for edible fats, and care should be taken that the fat does not burn. When running off after straining for storage, stir well while setting, as this prevents seeding, i. e., the granular condition observed when the tallow has set, and further, the stirring will make the material keep better.

#### Tripes

The portion of the stomachs known as the paunch of cattle, calves and sheep can be used for human consumption, and when cleansed and parboiled is known as tripe. The method of preparation is as follows: First empty the stomach of contents and wash after turning inside out, and then scald in the way suggested for the scalding of pigs. Tripe should be scraped clean and white in water of a temperature of about 150 degrees, which may be obtained by using two buckets of boiling water to one of cold. To facilitate the cleaning process tripe may be laid out and beaten with a stick as soon as the lining begins to loosen in the scald. Scrape clean, rinse in clean cold water and, in the case of ox tripe, boil for about five hours. The smaller tripes of sheep and calves should be boiled for a proportionately shorter period. After freeing from all superfluous fat and skin the tripe will be ready for the household.

#### Casings

A fair proportion of the large and small intestines may be utilized for sausage casings. After cleaning they may be salted and saved till required for use. In the saving process the intestines are first run off from the "set" or intact lot of guts freed from adherent fat and turned by means of a turning stick. These runners are then soaked in luke-warm water and scraped perfectly clean of the mucous lining by means of a piece of bone or wood on a level and flat board. Finally they are packed in salt and stowed in barrels till required for use.

#### Bones

Bones may be utilized on the farm, either for cattle or poultry food. While the bones are fresh and green most of the softer ones may be ground and fed to poultry as ground green-bone. If required for cattle they may be burned, and the calcined result pulverized and mixed with the food.

#### Hair

Hog hair, cow tails and other hair in marketable quantities has a commercial value. Hair scraped from pigs should be sun-dried before putting into bags.

#### Other Products

Calves' heads and feet, ox feet and sheep trotters are first prepared for human consumption by scalding. The scalding method is similar to that used for preparing tripe, and the temperature is roughly the same. Ox heads and feet require a little higher temperature in the scald than calves' heads and feet. After striking the scald, place in luke-warm water and scrape clean, using a blunt knife and

large tablespoon for the purpose. Finish off by shaving with a very sharp knife.

#### Neatsfoot Oil

Calves' feet, ox feet and sheep trotters, after scalding, may be further boiled for the oil which they give off. After boiling in water for a few hours the oil will float on the water. This may be skimmed off and stored in bottles.

#### All Utilized

At city abattoirs practically everything that is derived from the animal is utilized. About the only portion of which use is not made is the paunch contents, and at some of the works even that is subjected to special treatment, being pressed in hydraulic or screw presses to free it from moisture, when it is dried finally and used as fuel.

Provide some shade in the pasture and some shelter from bad weather. The pigs will show their appreciation in increased returns.

#### CAN HE BRING HOME THE BACON

By R. Q. Wickham

He may be fat, he may be tall,  
He may be lean, he may be small,  
The most important thing of all,  
Can he bring home the bacon?

He may not be a handsome gent,  
He may not have an extra cent,  
But always ready with the rent,  
And he brings home the bacon.

It matters little when and how,  
So the man behind the plow,  
Fills the corn crib and the mow,  
And thus brings home the bacon.

It makes no difference how it's done,  
So the man behind the gun,  
Makes the other fellow run,  
And he brings home the bacon.

The Eastern American Berkshire Congress Show and Eastern States Exposition takes place at Springfield, Massachusetts October 12-20. A long list of cash prizes and trophies is offered.

## Field Notes from the Live Stock Men

D. F. Conant of Santa Margarita Rancho writes that he has sold to S. C. Thompson of Fallon, Nevada, a bull calf out of Mamie Owl, 261075. This cow as a two year old made 435 pounds of fat. The calf's sire is Pansy's Gertie, Lad, 104963, whose dam made 539 pounds of fat. Mr. Conant has also just delivered to C. J. Daily of Camarillo a bull calf out of Victor's Lady Dolly, 237739 who has a record of three pounds of butter in one day (official test).

Gotshall and Magruder report the sale of the young sire, Stratford Juliana De Kol, to Hard Brothers of Ribon.

Thousands of head of Texas cattle will be transferred to grazing sections of Arkansas, Mississippi and Alabama. This great movement of livestock will be under direction of agents of the federal department of agriculture.

Eastern creameries and cheese factories are making appeal for trained workers and dairymen generally in sections of the country are crying for trained dairy help.

The famous Dome Building on Illinois state fair grounds at Springfield recently destroyed by fire. The old building, which was valued at \$150,000, was a noted landmark. Its loss was seriously felt just before the annual fair.

State and county fairs generally over the East this year announce exceptionally large showings of draft horses. It was feared some months ago that the draft horse class would show exceptionally light entries. The prospect at this moment is favorable.

It costs \$104.06 to raise a horse three years of age under general conditions as they exist over the United States.

BUTTE CITY RANCH, Box C, Butte City, Glenn Co. Cal.

A spectacular stunt is being pulled off in Washington by the maintaining of a flock of sheep on the White House lawn. The idea is to encourage or attract attention to the sheep industry. Present prices of wool and of mutton will accomplish far more, however, in this direction.

Some "medium bright" wools have been sold in Boston at 70 and 72 cents. Some Montana clips in original bags sold at 66 cents, which means \$1.70 cleaned. The farmers generally over the East are paying \$10 and \$11 for aged stock and \$13 to \$16 for yearling ewes for breeding purposes. More general interest was never shown in picking up breeders.

The Dairy Cattle Congress will be held at Waterloo, Iowa, October 1-7.

Holstein breeders of Kentucky have organized a state organization. The president is J. V. Bowles, Bardstown.

The Bureau of Markets, United States department of agriculture, is now issuing reports showing carlot shipments of cattle, hogs, sheep and horses.

Secretary Houston of the United States department of agriculture has ordered amendment of regulations

governing interstate movement of livestock which provides that swine given "simultaneous" inoculation shall be held under supervision at public stockyards not less than seven days. Formerly the regulations called for a 14-day quarantine.

A total decrease of 115,005,000 in the world's meat producing animals is shown in a comparison of present with pre-war conditions. While the increase of cattle in the United States was 7,090,000 during this period, the total world decrease was 28,080,000. Sheep decreased 3,000,000 in the United States, and 54,500,000 in the world. Hogs increased 6,275,000 in the United States, but decreased 32,425,000 in the world supply.

The McAlister Holstein herd at Chino has been making some creditable performances during the past nine months. Several state records have been broken during this period. The hot weather has not caused a postponement of the official test work as shown by the remarkable record of the senior three year old heifer, Meta Ward Kuperus, whose photograph and record appear in this issue. The McAlister boys call her the champion hot weather cow of the

state, and she has earned the title. This makes no less than eight heifers in the McAlister herd to break state records since last November. Forty-six cows have freshened in the last eight months, three of which have made over 31 pounds butter in seven days; 19 made over 25 pounds butter, and only two heifers made less than 20 pounds. Seven two year olds made over 20 pounds butter with their first calves. Twenty cows from two to four and one-half years of age have averaged 27.91 pounds butter in seven days. Individually and collectively this is a great bunch of A. R. O. cows and reflect great credit on their owners.

Follyland Nancy (52457), a two-year-old Guernsey heifer, bred and owned by I. C. Blandy of New York, recently completed an official year's record of 12270.9 pounds of milk and 712.60 pounds of butterfat, her average test being 5.8 per cent. Three weeks after finishing her record she dropped a fine heifer calf, which is now growing well.

O. Harris, the noted Hereford breeder of Harris, Missouri, has been visiting his son, Clifford B. Harris of Los Angeles, who represents the Harris interests in California. This was a

vacation trip for the elder Harris, who was much in need of a rest after a strenuous year of Hereford sales, events which will stand out in bold relief as long as Herefords are bred in America. More than 500 head of the Harris cattle sold for a grand average of approximately \$1400 per head and shattered all existing records for the breed. The great show and breeding bull, Repeater 7th brought \$27,000; Gay Lad 16th sold for \$20,000, and a number of others in four and five figures. Mr. Harris returned to his Missouri home via Canada. He is an ex-president of the American Hereford Breeders' Association and is still a director. He is a director in the American Royal and Chicago International shows and is one of the deans of American Herefordism.

C. B. Cunningham of the Billiken Herd writes as to that great Chester White, Billiken, No. 375....7, that he will be at the coming state fair. Some Chester White breeders in California think this is one of the finest Chester boars yet produced. He was sired by William A, he by Billy A, and he by Wonder. His dam is Elmo's Pride, she by Hiland Chief who traces back

# Greatest Proven Sire in the West

**PRINCE  
GELSCHÉ  
WALKER  
81663**

**AGAIN  
at the HEAD  
of  
OUR HERD**

***Judged from every angle, the distinction of being called the "Greatest Bull in the West" is justly due Prince Gelsche Walker.***

He is backed by the most consistent array of high producing and prepotent ancestors of any bull in the West, with the possible exception of King of the Black and Whites, who comes of the same family.

Every one of his first seven sires have produced a 30 pound daughter and all but one have sired two or more.

Five of his seven nearest dams are 30 pound cows, the seven averaging 29.60. Five of the seven have produced 30 pound daughters and the other two have young daughters that bid fair to exceed this mark.

His dam with her dam and grand dam form one of the few instances of three generations of 30 pound cows and the only family in the world in which two 30 pound cows appear in the third generation.

It is this great inheritance of production blood that has enabled the daughters of Prince Gelsche Walker to break no less than 15 state records for milk and butter before any have reached mature age.

He is the only sire in California with two daughters that average over 35 pounds butter in 7 days.

He is the only sire in California with two two year old daughters averaging over 25 pounds in 7 days and 98.75 pounds in 30 days.

Out of 15 tested daughters seven two year olds average 20.45 pounds.

He is sire of—

Miss Valley Mead De Kol Walker,

36.81 at 3 yrs. 5 mos., State Record.

25.68 at 2 yrs. 6 mos., State Record when made.

30 days, 102.38 at 2 yrs. 6 mos., State Record when made.  
8 months after calving, 21.33 at 2 yrs. 6 mos., World's Record.

Butter 8 months (strictly official), 754.24 at 2 yrs. 6 mos., State Record.

Lady Hiske Walker,

34.25 at 4 yrs. 4 mos., State Record.

Nutula Queen Alcartra 3rd,

24.46 at 2 yrs. 6 mos., State Record when made.

30 days, 95.16 at 2 yrs. 6 mos., State Record when made.

Miss Gelsche Walker Korn.,

23.17 at 2 yrs. 4 mos., State Record when made.

30 days, 94.86 at 2 yrs. 4 mos., State Record.

Inka Tritomia Walker, 21.39 at 2 yrs. 6 mos.

30 days, 87.22 at 2 yrs. 6 mos.

365 days, 817.11.

Miss Valley Mead De Kol Walker was awarded \$98.00 prize money in her two year old form by the Holstein Friesian Association of America, which we believe is more than was credited to any other cow. Two of his daughters were awarded \$165.00 in prize money last year by the National Association.

These are only a few of the evidences of unquestionable superiority and transmitting power of Prince Gelsche Walker. His career is only well started, having as yet no daughters at mature age. His sons already head a number of pure bred herds and will add to the fame of this family when their daughters are tested.

***A son of this famous sire placed at the head of your herd will bring the greatest possible return. His granddaughters will be in great demand at high figures.***

We have for sale what we believe to be one of his very best sons. He represents what has proved to be an extremely fortunate cross. He is full brother to the state record junior 4 year old 34.25 and 75 per cent brother to the state junior 3 year old 36.81. His dam is a 26.87 pound daughter of Juliana King of Riverside and has a good yearly record.

This youngster is right individually, perfectly straight and about three-fourths to seven-eighths white. He has another full sister coming on and a full brother already in service in a pure bred herd.

Also have several of his sons that will make ideal sires for high class grade herds.

Pedigrees and detailed information by request.

**A. W. Morris & Sons Corporation**  
**Woodland Cal.**

o Chicksaw Chief. Elmo's Pride was two times grand champion at the Interstate Show at Sioux City.

Finding the number of cows in their herd far too small to supply the increasing demand for their famous brand of guaranteed milk, the Elliott Brant Company of Los Angeles County decided to enlarge their herd. With this object in mind D. O. Brant went East a few weeks ago and according to his own statement he had considerable difficulty in buying the number and quality he wanted. Before going East Mr. Brant tried to get cattle on the coast but was unsuccessful. He says that the bidding for high class Guernseys at the big Eastern sales this year was remarkable. Mr. Brant travelled through Pennsylvania, New York, Massachusetts, New Hampshire, and Maine before he found the seventy odd head he shipped out. There were about 40 yearlings and 32 head of two

year olds and up in the shipment. There were 17 head of Langwater bred stock in the lot, including a beautiful bunch of heifers. There were also seven imported cows in milk. This concern now owns one of the very largest Guernsey breeding establishments in the West. Including the last importation there are over 140 head of high class animals. The results of their first two years of official test work show an average production of 10,172.28 pounds of milk and 507.97 pounds of fat for the herd, truly a remarkable record. While the show yard is not neglected the utility type receives first consideration, and the results attained on the Elliott Brant ranch are proof sufficient of both the capacity of the animals for production and the able management of the extensive business. The company supplies the most exclusive Los Angeles trade with its product.

## Work of Agricultural Clubs

By Chas. L. Hampton

This 12-year-old boy, Stewart Duhig of Napa County, represents one of over 2000 elementary school agricultural club boys of California. A high school agricultural club boy is the

fice of district club leader, as agents of the United States department of agriculture in the states relations service working under the Smith-Lever Act of 1912. Their duty is to super-

Work of a 12-year-old

Ohio Improved Chester White barrow, age 6½ months, weight 305.5 pounds. Bred by H. C. Melone. Raised in a four-months' economical pork producing contest by a 12-year-old boy, Stewart Duhig of Napa County. The contest began when the pig was 6 weeks old. Gain in four months 247.5 pounds, average daily gain 2.06 pounds, gross profits at 14 cents a pound \$42.77, net profit \$18.38.

local leader of each elementary agricultural club. This method of supervision was started by the boys of the Napa High School Agricultural Club in 1915. As a result of their success the government has appointed 16 high school agricultural teachers to the of-

vice all agricultural club work carried on by the boys of the high school and by boys of the last three grades of the elementary schools.

The agricultural club work consists of animal and crop contests.

## Preventing Increase of Cholera

Recommendations by the department of agriculture:

Locate your hog lots and pastures away from streams and public high ways and do not allow your hogs to run on free range or highways nor to have access to canals or irrigation ditches.

Do not visit your neighbor's farm or allow him to visit you if he has hog cholera on his premises.

Do not drive into hog lots after driving on public highways.

Do not use hog lots for yarding wagons and farm implements.

Do not place newly-purchased stock, stock procured or borrowed for breeding purposes, or stock exhibited at county fairs immediately with your herd. Keep such stock quarantined in separate pens for at least two weeks, and use care in feeding and attending stock to prevent carrying infection from these to other pens.

Burn to ashes or cover with quicklime and bury under four feet of earth all dead animals and the viscera removed from animals at butchering time, because they attract buzzards, dogs, etc., which are liable to carry hog cholera infection.

If hog cholera appears in the neighborhood confine your dog and encourage your neighbor to do the same. Mange, lice and worms lower the vitality of hogs, rendering them more susceptible to disease.

Have all hogs treated immediately with anti-hog cholera serum, after which they should be kept on a light diet, with pure drinking water, and confined to limited quarters that

should be cleaned and sprayed three times a week with "1 part of compound cresol solution to 30 parts of water," until the disease has abated in the herd.

To obtain the best results the serum must be administered as soon as the disease is detected in the herd. Be sure that the temperature of all hogs is taken. A temperature above 104 degrees Fahrenheit in ordinary weather and when the animal is not excited indicates infection, and such hogs require an increased dose of serum.

Remove all manure and mix it thoroughly with quicklime.

Burn all litter, rubbish and old hog troughs.

After the premises are thoroughly cleaned, spray walls, floors and other surfaces, including remaining hog troughs, etc., with a disinfectant (1 part compound cresol solution to 30 parts water). Where hog houses are small, turn them over, exposing interior to sunlight. Clean premises, properly exposed to sunlight, will not retain infection any great length of time.

Wallow holes and cesspools should be filled in, drained, or fenced off.

All runs underneath buildings should be cleaned and disinfected and then boarded up to keep hogs out.

Destroy hogs that do not fully recover, as they may be carriers of cholera infection.

Ventura has recalled its arrangements for a county fair and will hold none until 1918.

## MARSH'S Big Type Poland Chinas

Model Major

Won 1st 1916, State Fair, 1st and Grand Champion, Modesto; 1st and Grand Champion, Sweepstakes and Gold Medal, Fresno. A sire whose get are of uniform excellence, attaining great weight at an early age and will win in the show yard. His pigs are great-sellers.

I B A Wonder

Reserve Champion P. P. I. E., 2nd aged Boar, Sacramento, 1916. Stands on 11¼-inch bone and scales 1000 pounds. One of the Great A Wonder's best sons.

Smooth Orphan

A true to type young sire of close up Hadley breeding and makes a wonderful cross on Model Major sows. Great spring of rib, heavy hammed and from a prolific strain.

## 3 Greatest Boars in America

My 14 sows averaged 8 pigs to the litter raised this year because big litters of uniformly good pigs are my hobby.

 Curb, Splint, Sweeney, Capped Hock,  
 Strained Tendons, Founder, Wind  
 Puffs, and all lameness from Spavin,  
 Ringbone and other bony tumors.  
 Cures all skin diseases or Parasites,  
 Thrush, Diphtheria. Removes all  
 Bunches from Horses or Cattle.

**As a Human Remedy for Rheumatism,  
 Sprains, Sore Throat, etc., it is invaluable.**  
 Every bottle of Caustic Balsam sold is  
 Warranted to give satisfaction. Price \$1.50  
 per bottle. Sold by druggists, or sent by ex-  
 press, charges paid, with full directions for  
 its use. Send for descriptive circulars,  
 testimonials, etc. Address  
 The Lawrence-Williams Co., Cleveland, O.

## Prepare for Fall Calving

By Ordering

### HOOD FARM BREEDING POWDER

In order that you may treat every cow after calving with this Powder. It is the most economical thing you can do, because it keeps cows in a normal, healthy breeding condition; makes them clean quickly; breed readily; there is less use of the bull, and little danger from abortion. You should also order

**HOOD FARM CALF SCOUR TREATMENT**  
 consisting of Hood Farm Calf Scour Remedy and Hood Farm Digestive Powder. Include in the order

**HOOD FARM MILK FEVER OUTFIT**  
 and  
**HOOD FARM GARGET REMEDY**

and you will be well prepared to meet the emergencies which frequently arise at calving time.

Prices, information and advice gladly given. Mention this paper.

**C. I. HOOD Co., Lowell, Mass.**

## KENDALL'S

**SPAVIN TREATMENT**

**Known for 40 Years as Kendall's Spavin Cure**

**A New Name But the Same Old Reliable Remedy**

**FARMERS and horsemen everywhere will be glad to know that this change is in the name only—that there is no change whatever in the famous old-time formula that has rendered such remarkable service in horse ailments—Bone Spavin, Ringbone, Splint, Curb, Sprains and Lameness—by the counter-irritant method.**

**Whether you get Kendall's under the old label or the new, the quality and efficiency is the same old reliable—with a 40-year-old reputation.**

**Get it of your druggist—\$1.00 per bottle—six for \$5.00—and ask for book "Treatise on the Horse"—or write**

## Bodega Cow Testing Association

By E. C. Voorhies

**P**ROOF as to the results of the work of cow testing associations is often asked by many of our dairymen. These men are usually desirous of seeing just where testing is going to benefit them.

The Bodega Cow Testing Association has just completed its second successful year, and a complete summary of the records shows where improvement has been brought about and also points toward need for further improvement. Due largely to the conscientious work of Matthew Resindes as tester, this association in one of the oldest dairy sections in California has prospered.

The following are summaries for two years' work. Records of six months duration or over are included in the summaries. All records of under six months duration are left out.

Butterfat—Lbs.	1st Yr.	2nd Yr.
Less than 100	34	9
100-125	49	47
125-150	81	97
150-175	125	131
175-200	120	122
200-250	184	189
250-300	78	86
300-400	15	27
400-500	1	—
500-600	—	1

The second year shows a decided advantage over the first, especially in the number of cows falling under 100 pounds of fat. The first year of the work practically five per cent fell under the 100 pound mark while the second year reduced this number to a trifle over one per cent of the total. Merely this in itself is proof enough as to the value of the work.

Oftentimes dairymen are found who admit that it is a good thing to test for a year or so but fail to see why it is necessary to continue the work. A glance at the summary for even this last year should show the intelligent dairyman why he should continue.

The Sebastopol Bank donated \$40 to be distributed among the owners of herds numbering 24 or under. Best herd—24 or less, \$15. This prize went to C. Welling with a herd of eight which averaged 220.59 pounds butterfat (for all cows) or 245.9 pounds butterfat (considering those with lactation periods of six months or over). Best 10 cows in herd 24 or less—\$10. David Gleason won this with 10 cows averaging 248.33 pounds fat. Best cow in herd 24 or less—won fat. Best cow in herd 24 or less, \$10—won by C. Welling 311.76 pounds butterfat. Highest record for a three-year-old in herds 24 or less—\$3.00—won by C. Welling, 255.13 pounds butterfat. Highest record for a two-year-old in herd 24 or less, \$2.00. Won by David Gleason, 240.29 pounds butterfat.

The Dairyman's Bank of Valley Ford donated \$60 to be used for prizes in herds of over 25 cows. For the best herd of 25 cows or over, \$20, won by Edward Gleason. Average 217.43 pounds of fat for all cows (32). Average for those with lactation periods of over six months (30 cows), 221.9 pounds fat. Best 10 cows in herd of over 25 cows \$10, won by J. D. Williams, average 343.92 pounds butterfat. For the best cow, \$10. J. D. Williams won this on a record of 591.75 pounds butterfat. For the best three-year-old, \$7.50, won by J. R. Gallagher, 249.45 pounds fat. For the best two-year-old, \$5.50, won by Ed Gleason, 229.59 pounds fat.

John Sereni of Fresno in addition to the above prizes offered a ton of alfalfa hay to the owner of the highest producer. This was won by J. D. Williams on his 592 pound cow. It might be interesting to note in this connection that during the first year of the association the highest record was 421.57 pounds butterfat. This year the highest milk record was 9103 pounds milk, while for the first year it was 7921.3 pounds.

Dairymen who are unfortunate enough to be outside the limits of a cow testing association can do much toward doing their own testing if they can spare the time once a month. Information will be gladly given and the necessary books furnished to those who are desirous of doing this work themselves, by applying to Animal Husbandry Division, University Farm, Davis, California.

## The 100% Silo

is the silo that's built of California Redwood. Think up all the good points a silo material should have—you'll find every one of them in

## California Redwood

*Resists rot and fire*

**Permanent**—contains a natural preservative that prevents decay. Not affected by sun, rain or violent changes of weather.

**Will not shrink, warp or swell**, when properly seasoned.

**Non-conducting**—Redwood retains the heat necessary for perfect fermentation of silage, keeps out cold, prevents freezing.

**Fire-resistant**, because non-resinous.

There are many other important advantages of Redwood for silos—in fact for all exterior and interior building construction. "California Redwood on the Farm" contains the whole story. Ask us for it. It's free.

If your local lumber dealer does not carry Redwood send us his name and we will arrange for him to get it for you.

**California Redwood Association**  
 770 New Call Building  
 San Francisco, California

Ask for the Child's Story of the "Big Trees" of California—there's a copy for every child in the nation.

## Book Your Orders

Now for a boar to head your herd from this grand sow. She traces directly to the splendid ancestry of Good Enuff on Sire's side, to Ohio Chief on Dam's side. Can you beat it? Come to the farm and see these fine Youngsters. They are sired by Oregon Defender, by Defender, the \$5000. boar, twice Chicago International Grand Champion. They are good enough for any one.

### MORE CATTLE

"Increased production of cattle, sheep and hogs is vital to save the world from a meat famine."

Ten years ago we had more beef cattle and fourteen million less population than we have now.

Our total number of cattle on hand January 1, 1917, 63,617,000 shows an increase, but of this number only 40,849,000 are beef cattle. In proportion to population and war needs our meat supply has greatly decreased.

The United States has only 739 cattle to the thousand of population and this includes dairy cattle.

Germany had 327 cattle to the thousand of population, has starved for meat fats, and has been an importing meat nation for years, dependant on other countries for its beef supply and supply of dairy products.

Cattle in Europe are estimated at over twenty-five million head, less than when the war started.

The export of meat and meat products has greatly increased.

The forest service officials estimate 15,000,000 cattle grazing on open ranges in the western states. This is a tremendous portion of the entire beef supply, as the western cattle are the source of supply drawn upon for stock cattle and feeders.

Every hoof of beef finished from grass saves much forage and grain for other use.

There is less net profit on running open range cattle than three years ago as feeder prices have not advanced in proportion to expense.

The Western cattleman who produces cattle must have a fair profit and cheap money, if the cattle are to be increased to bear the burden of war demands.—A. L. Spellmeyer.

### TYPES OF SILOS

There are two general types of silos: Pit silos, or silos built partially or wholly below ground; silos above ground, built of wood or of masonry. The masonry silo is commonly built of concrete hollow blocks, clay blocks or hollow brick, solid concrete, built by pouring concrete into form: sometimes called the "monolithic silo," concrete plastered on metal lath. All masonry silos should be reinforced with steel.

The essential features of a well designed silo can be summed up briefly as follows:

The walls should be practically airtight.

The inner surfaces should be smooth and perpendicular.

The inner surfaces should be free from corners. Round silos are more efficient and economical than other types.

The walls should be sufficiently non-conducting to prevent excessive freezing, especially so when the silage is to be fed during cold weather.

The walls should be sufficiently firm or sufficiently well anchored to prevent cracking due to settling or racking due to wind.

The doors should be so designed that a minimum amount of silage has to be removed before they can be opened.

A good ladder should be provided with steps from 15 to 18 inches apart and at least 3½ inches away from the silo or walls of the chute.

The foundation should be heavy, well made and reach below the frost line.

A good roof makes the silo more durable, adds greatly to its appearance, and if tight assists materially in keeping the silage from freezing.

Silos which have the above features will be found convenient, cause little trouble and when properly filled will keep the silage in perfect condition.

The Waterloo Dairy Show, October 1-7, will undoubtedly be the best ever this year. Practical demonstrations of every phase of the dairy industry will be made. Breeders representing 15 states have already placed entries. The premiums offered for Jerseys, Guernseys, Ayrshires and Holsteins aggregate \$8000. The national breed associations and clubs offer special premiums.

E. A. Temblin of Swift and Co., Chicago, has been chosen to make the long journey to Buenos Aires where he will judge the bullocks at the fat stock show. He has judged carlot classes at the International several times with satisfaction.

## CUTTER'S BLACKLEG PILLS

"California's Favorite" for nearly 20 years

For the Prevention of Blackleg in calves and young cattle

Their superiority is due to nearly 20 years of specializing in "Vaccines and Serums only."

Year in and Year Out they give better satisfaction than any other vaccine made, and the cost of a few cents per dose is cheap insurance against a disease that always takes the fattest and best.

Single Pills may be used for ordinary and range stock.

Double Pills should be used for pure bred and high grade stock.

Use any Injector, but Cutter's simplest and strongest.

Prices:

10 dose pkge. Single pills \$1.00  
50 dose pkge. Single pills 4.00  
10 dose pkge. Double Pills 1.50  
50 dose pkge. Double Pills 6.00  
Cutter's Pill Injector... 1.50

Insist on Cutter's. If unobtainable, order direct.

Write for new booklet, "The Control of Blackleg." It tells about Anti-Blackleg Serum which cures Blackleg and may be used simultaneously with vaccine to combat outbreaks and safely protect valuable stock.

## Moldy Silage

**FAILURE** to properly exclude the air which is essential to fungus growth is the principal cause of moldy silage, according to a writer in *Practical Dairyman*. This is explained several ways and one of the most

organisms are kept from them. The acid destroying organisms are certain molds and *Oidium Lactis*. When these destroy the acid present, the sour milk and silage will spoil and decay. It is an important fact that these acid destroying organisms re-

Moorland Johanna Haskins

Came within one day of breaking the state record in the junior three-year-old class. She made 32.87 pounds butter, 414.8 pounds milk, and tested 6.33 per cent fat, one of the highest testing animals of the breed. Owned by W. K. Abbott.

reasonable is that given by the Connecticut experiment station as a result of its six-year investigation of silage fermentation. The investigators state that silage fermentation is similar to that which occurs in milk; "that soured milk is pickled milk as silage pickled corn, pickled by the acids produced from the sugars by the acid bacteria. Soured milk and silage will keep as long as acid destroying or-

quire the presence of air. To keep silage, then, is to keep air from it.

Other investigators have given other theories as to the exact cause of moldy silage, but all unite on the essential point—to preserve silage air must be kept from it. The data given in the particular instance under discussion is insufficient to determine the exact cause of the moldy silage, but it is doubtless due to the failure to comply

with one of the following essentials of silage preservation:

The silo should be sufficiently deep to provide for good settling and packing; the walls should be as impervious to air as possible, and noncon-

ducting to heat, cold and moisture.

Corn should be ensiled as the ear begins to glaze.

Corn should be cut fine and packed firmly so as to exclude as much air as possible.

## Brighton Farm Herds

Established 1880 37 Years in One Family on One Farm

H. L. and E. H. MURPHY, Props.

Perkins, SACRAMENTO COUNTY, California

## SHORTHORNS

We have for sale seventeen yearling and two year old Shorthorn bulls, as good as we ever offered for sale, large, girthy, heavy boned bulls of strong individuality and breeding. We also have ten under a year bulls that will please any breeder or range man, also a few choice females that will be bought by the first man that wants females and sees them.

## BERKSHIRES

Our Herd carries the best strains of blood in America, the individuality of which is shown by our consistent winning throughout the state and district fairs. Our Herd is headed by the great breeding and show boar, Artful King 11th, 210779, second prize boar at the National Swine Show at Omaha, 1916. Our brood sows consist of such noted animals as,

Symboleer's Belle, 192393, farrowed 32 pigs in last two litters.

Legal Duchess, 212916.  
Rookwood Lady 83rd, 207887.  
Mayfield Laurel 10th, 238170.  
Mayfield Laurel 11th, 238171.  
Mayfield Laurel 15th, 238172.

and other sows of equally high breeding. Choice young stock for sale at all times. All matured stock guaranteed breeders or an animal of equal value given in place.

Our winnings on Shorthorns and Berkshires on the 1916 circuit of California fairs were: 24 champions, 51 first prizes, 30 second prizes.

Meet us at the State Fair, see our exhibit and visit our farm four miles from Fair Grounds.

The leaves and heavier portions should be well mixed and evenly scattered over the surface during the filling.

If fodder and weather are very dry, water should be added. If too dry, corn will not pack or ferment sufficiently to prevent fungus growth.

Not less than 1½ inches should be fed from the surface each day after the silo has been opened.

The corn should be spread during

the filling and not allowed to heat in a pile.

Silage should not be dug into when hot, or the surface, either as a whole or in spots, be broken deeper than necessary for the day's feed.

New South Wales has a workmen's compensation law covering all employees except those receiving a yearly income above \$1518 or casual workers.

WHAT kind of silo to build must be determined by each man according to individual circumstances and preferences. The size to build should be determined by the number of stock to be fed. The following table is from a bulletin of the Missouri experiment station and is intended as a guide to the dairyman who is going to

build a silo. The requirements of beef cattle will not be greatly different, and if one wishes to feed silage for more than the six months' period for which the estimate is made, will be easy to figure out the size required on a proportion basis. In case the silo should be large enough to hold a little more silage than likely to be needed. There are of times in the early and late summer when the silo is needed to supplement pastures, so that it is best not keep too close to the actual requirements of the six months for which figures are made.

The table follows:

Number of cows in herd.	Feed for 180 days.		
	Estimate of silage consumed, tons.	Size of silo. Diameter feet.	Height feet.
10	36	10	25
12	43	10	28
15	54	11	29
20	72	12	32
25	90	13	33
30	108	14	34
35	126	15	34
40	144	16	35
45	162	16	37
50	180	17	37

#### BATTLING FOR EFFICIENCY

THE Traction Engine and Implement Dealers' Association reports prospects exceedingly bright for the second annual demonstration which is scheduled for September 18-22. The location is accessible being on the Vall Ranch two miles east of the end of the Stephenson Avenue car line, Los Angeles.

There are 650 acres in this tract and it is expected that it will all be thoroughly plowed at the end of five days.

Tractor farming has been brought down to a fine point of efficiency, as just as in all other phases of modern farming, it had to have many trials and many eliminations before reaching its ultimate degree of success. It is the purpose at this coming demonstration to illustrate to each ranchman and grower just what he himself might do on his own ground with a tractor.

A splendid exhibit is being arranged that will prove of tremendous interest and drawing power to thousands. A long list of representative and reliable merchants are planning on displays of their products. Several large realty firms will have attractive booths; portable bungalows will be shown; electrical appliances and tractors, automobiles and motor trucks and their accessories will all be exhibited; there will be daily demonstrations of food products; household equipment and pianos will be artistically displayed; also interesting exhibits and demonstrations of fuel and lubricating oils.

The railroads appreciate the importance of the demonstration to ranchers and are offering sumptuous rates of a fare and one-third for a round trip from all points in California, Nevada, and Arizona.

An excellent cafe will furnish moderate priced meals. Completely equipped rest rooms for women and children will add to the comfort.

No admission is charged and parking for autos is provided.

# Farm Home Protection

## Put the Water in a Redwood Tank—

Pacific Redwood Tanks are not affected by heat or cold, dry atmosphere or dampness—and Redwood is the hardest wood to burn.

The water in the tank may always be depended upon, when the tank is built of Pacific Redwood, by the Pacific workmen, according to Pacific plans. They have proved their staying qualities in the mountains and on the plains, in all the varying climates of the Pacific Coast from Canada to Mexico, for a quarter of a century.

Why pay three times as much for a steel tank, besides double the freight, when a Pacific Redwood tank is better, lasts longer, and gives better service?

Ask us to prove these claims.

## Senior Yearling Bull

**GREENDALE SULTAN**

By Lespedeza Sultan, of straight Scotch breeding and an exceptional individual. A combination of Whitehall Sultan and King Cumberland.

### ANNOUNCEMENT

The establishment of this herd of registered Shorthorn cattle of pure Scotch breeding was accomplished only after months of time spent in selecting the animals from the herds of our foremost American breeders, and from the larger breeders' consignment sales. Special attention was given to the matter of breed character, individual excellence and beef type. No expense was spared to lay the foundation for a first class lot of breeding matrons headed by the best bulls obtainable. Cattlemen who demand the rugged, fleshy type of bulls for range duty will have a choice lot to select from next season.

# Digest of Food Control Bill

**B**Y reason of the existence of a state of war, congress has enacted and the president has approved a bill to "provide further for the national security and defense by encouraging the production, conserving the supply and controlling the distribution of food products and fuel."

## Scope of Food Bill

This act relates to "foods, feeds, fuel, including fuel oil and natural gas, fertilizers and fertilizer ingredients, tools, utensils, implements, machinery and equipment required for the actual production of food, feeds and fuel."

The president is authorized to use such agencies or persons as he may see fit to carry out its provisions.

## Price Assurance for Wheat

A minimum guarantee for wheat of 2 a bushel is assured for the 1918 crop, but this guarantee does not apply to the 1917 crop. In addition the president may during the period of the war determine what shall be a suitable guarantee of the price of wheat in order to stimulate production. The import of this is that the government would have to support wheat at that price should an unusually big world crop tend to force it down. This guarantees the farmer a fair price for his wheat in the face of unforeseen price depressing emergencies. Authority is also given the president to change tariff schedules

other part thereof, in or through which any necessities are or may be manufactured, produced, prepared or mined." Whenever the president deems the governmental need of such plants has ended they may be restored to their owners. Compensation, of course, is provided. In the clause authorizing the president to operate plants it is provided that he may prescribe regulations governing the employment, control or compensation of employees employed in such plants, etc.

## Distillation Banned

The "liquor" section of the bill forbids the use of "foods, fruits, food materials and feeds" for making distilled liquors except for non-beverage purposes and for the fortification of sweet wines. As to beer and wine, the president is given authority to stop their manufacture if he deems it essential to secure an adequate and continuous supply of food. Stocks of liquor already made, whether in bond or in stock, may be commandeered by the president for redistillation if such action is necessary to meet the requirements of the government. These two latter provisions are left entirely at the president's discretion.

## Prices of Coal to Be Fixed

If deemed necessary the president is authorized to fix the price of coal and coke. This applies to wherever coal or coke may be sold and whether by producer or dealer. The president

Meta Ward Kuperus

Senior three year old owned by McAlister and Son, Chino. She just finished seven day test and made 32.43 pounds of butter, a state record in her class.

wheat should conditions change and wheat start to pour into the United States in response to the attraction of the existing artificial price.

## Provisions Against Speculation and Hoarding

The hoarding or monopolization of, or the willful waste for the purpose of enhancing the price of, or the entering into a conspiracy for the purpose of interfering in certain enumerated ways with the production or distribution of foods, feeds and fuels is made unlawful. The president is authorized thereto to regulate or prohibit speculation in foods, feeds and fuels.

## Road Powers

Whenever the president may find it essential, he is empowered to license any business relating to importation, manufacture, storage, mining or distribution of food, feed, fuel or other articles named. This does not apply to farmers or other actual producers or to the railroads.

He is also authorized to purchase, store, provide, storage facilities for and sell wheat, flour, meal, beans and potatoes.

These provisions are in addition to the power granted to requisition any supplies he may need for the national defense forces. There is an exemption to protect supplies of foodstuffs reasonably required by the owners for use or consumption by themselves or dependents.

## Power to Take Over Plants

In order to supply the army and navy the president is authorized to take over and operate "any factory, packing house, oil pipe line, mine or

is further authorized "to establish rules for the regulation of the production, sale, shipment, distribution, apportionment or storage thereof among dealers and consumers, domestic or foreign; said authority and power may be exercised by him through the agency of the federal trade commission during the war or for such part of said time as in his judgment may be necessary."

If, in, the president's opinion, any producer or dealer fails or neglects to conform to such prices or regulation, or to conduct his business efficiently under such regulation and control, the president is authorized to requisition such plant or business for the period of the war or such part of that time as may be deemed expedient.

## Government May Buy Coal

In addition the bill gives the president the option, if he should think that plan better, of forcing all producers of coal and coke, either in any special coal field or in the entire country, to sell all their products to the United States or to some agency which the president may designate, and then let the United States or that agency distribute the coal and coke.

## Nitrates for Fertilizers

Power is given the president to acquire such stocks of nitrates as he may determine to be necessary and find available for fertilizers, and to dispose of them to the consumer at cost plus expenses.

## Bill Dies at Conclusion of War

The entire bill is automatically wiped off the statute books with the coming of peace.

# Montelena Herd of Large Yorkshires

Lake Park King 25211

Unsurpassed as a breeder, feeder, and producer of quality pork, the Yorkshire, with its quick, economical gains, and its large litters, cannot help but appeal to all hog raisers, in these days when the demand for pork products so far exceeds the supply.

We invite your inspection of our Herd at the State Fair next week.

## The De Laval Line IDEAL GREEN FEED SILO

Now is the time to plan for your silo. In selecting it remember that it is GOOD silage that is most profitable to feed, and that GOOD silage can be produced only in a Good silo. Something that is claimed to be "just as good" at a lower price is never as good. A "cheap" silo is bound to be an inferior silo, and it cannot produce GOOD silage. A "cheap" silo, or a silo that you can erect from "cheap" material, will prove the most costly you can buy.

**Don't Take a Chance—Get the Best—  
Install an Ideal Green Feed Silo**

## ACME FEED CUTTER and SILO FILLER

All Steel Frame—Securely riveted. No bolts to jar loose. No warping nor bearings out of alignment, causing vibration and unnecessary wear, as is the case with the old style wood frame cutters.

Low Feed Table—Automatic Feeding Device—Enormous Capacity—Six-Arm Blower Fan—Independent Control of Blower and Cutter Speeds—Reversible Feed Rollers—Positive Safety Device. Reasonable Prices.

### AT THE STATE FAIR

The De Laval Line will be exhibited at the State Fair, Sacramento, September 8-15. A cordial invitation is extended to all to call and inspect our complete line of Dairy Equipment. Location:—On Fair Grounds near Creamery and Milking Barn.

Everything for the Dairy  
61 BEALE ST. SAN FRANCISCO, CAL.

Correspondence with the advertisers in the California Cultivator will convince you that their articles will save you money.

### 1000 POUND JERSEYS WITH 800 POUND RECORDS

Authorities on Jersey cattle who have seen the big official record making registered Jersey cows in California, have invariably remarked that we have a number of 1000 pound cows in the herds of this state. They have in mind that if these cows had been handled on official test in the same way that the big record makers in other sections of the country are handled, we would have a number of cows with official records above 1000 pounds butter in one year instead of the records of 700 to 800 pounds that they now have.

There is no doubt of the soundness of this conclusion, for all the leading California Jersey breeders have carried the theory of making official records under ordinary dairy conditions to the extreme. In other words it has been their aim to make their records an absolutely normal index to the dairy production capacity of their cows, and a guide to the average dairyman as to what yields he might expect to secure from the same cows or cows of like capacity in his own herd, under normal conditions of feeding and twice a day milking.

Jerseys breeders of Stanislaus County, California, have made the bulk of the Register of Merit records so far made in the state, and hold practically all of the state records in the various classes. Yet these records have been made under no better conditions than should prevail in any commercial dairy, and the records are away below what the cows could do with more liberal feeding and three-time milking.

The records of all the splendid group of Register of Merit cows and the dams of the Register of Merit daughters that will be sold in the Stanislaus County Jersey Breeders' First Consignment Sale at Modesto on Tuesday, September 25, were made under ordinary dairy conditions, and the dairyman who wants to add a few real good registered Jerseys to his herd will find the right sort in this sale.

### DEVELOPING PULLETS FOR HEAVY LAYERS

Written for California Cultivator  
By Chas. Weeks.

**T**O make each year's pullet better than the parent stock is a difficult task. To do requires the most exact selection of the parent stock for vigor and prepotency, with due regard to maturity and prime condition. Pullets must excel parent stock in order to make progress in developing strain. This parent stock must correctly mated with long years breeding behind both male and female, and the matings must not closely related and should be of a pure age. To make a correct mating excel itself in progeny requires a condition in this parent stock that is very best possible. The parent stock must be at the zenith in condition, order to stamp superiority on the young.

Sunshine, fresh air, plenty of exercise, clean quarters free from dirt and pure, wholesome feed constitute the environment that will be conducive to best results from well-mated birds. Do not feed wet mash or sloppy feeds to breeding stock. Selection and conditioning of breeding stock is the first essential toward producing better pullets.

So much for the starting of a well-bred pullet. The egg from which the well-bred pullet comes must be very carefully and exactly incubated or the pullet will be handicapped for life. Here is where the very fine adjustment and care is necessary, that strong germ in the egg will meet obstacles in the way of its development that will hinder natural progress. The temperature should be kept as regular as a clock between 102 and 103 degrees. The egg must not be chilled in cooling or overheated one single time during incubation. Too little moisture weakens the germ and too much makes the chick too large to get out of the egg. Incubation requires the closest attention to exactness. Anyone can hatch chicks. It is very easy to hatch chicks, but to do it without injury to the tender, growing germ or embryo is very difficult and careful piece of work.

No careless person can afford to tempt incubation. A well-bred chick correctly hatched and you have a good foundation upon which to build a profitable layer.

Thus if this well-bred chick is naturally brooded, with plenty of sunshine and fresh air during the period it needs artificial heat, with clean quarters free from dust, then it has a good start in life and can be grown into a profitable hen.

At three or four weeks of age the chicks should be taken away from artificial heat and divided into smaller flocks, the cockerels and pullets being separated. Right here where my small pen system proves superior. We move them from heated pens into pens exactly the same in every detail except they are without heat. The chicks climb always up, for they have the climbing habit from the start, to a roosting platform as usual, and are divided into smaller flocks are in danger of piling and sweating, for never place more than 50 together in one compartment. These have a close bed of straw to snuggle in, and if the weather is too cold we throw sacks over the two perches and let them hang down over the chicks. Fifty chicks in a close bed of straw up on this drooping board, two feet from the ground floor will snuggle together with each head out to the fresh air and seldom if ever, will one be smothered.

The sooner the chicks can do without artificial heat the better, for artificial heat after a certain age tends to weaken and lessen the vigor. By one they take to the perches of their own accord, for the perches are right above them as they huddle in the clean straw, and it is surprising how quickly they line up. I have this year taking to the perches with no trouble at all. When I look back at the worry and loss of previous years in trying to get chicks to the perches I draw a long sigh of relief to think that I have at last solved that hardest of problems for the poultryman, the getting of young stock to take to the perches. As young stock takes the perches usually think they are just as good as gold. Of all the inventions for

- Fox.
- 5 Daughters of Golden Brutus.
- 2 Granddaughters of Interested Prince.
- 5 Daughters of Primrose's King.
- A Grandson of Sensational Fern.

All of these and many more of equal merit will be sold by leading Stanislaus County Jersey breeders in their first consignment sale.

### MODESTO, CALIFORNIA

**Tuesday, September 25, 1917**

**10 o'clock A. M. on the Modesto Fair Grounds**

This is without question the most attractive lot of registered Jersey cattle ever sold through a public sale ring in California.

The great Register of Merit records present in the pedigrees are proof of the productive blood offered, and the animals listed for sale represent the pick of those offered for consignment.

Most of the offering consists of young cows, heifers with first calf, and choice bred and unbred heifers. The fresh cows and heifers form one of the most attractive features of the sale.

Only two bulls of service age will be sold and they are both high class individuals of rich breeding.

#### CONTRIBUTORS TO THE SALE.

re been tried to get young stock on perches this scheme of teaching baby chick right from the start going up habit beats all that I have ever tried.

We have followed this well-bred pullet from the parent stock up to three four weeks of age. If she has had any essential in each department passed through she now has clear lines, and it is only a matter of an quarters, clean water and a wholesome variety of clean feed, with emphasis on clean. It is the biggest mistake to take clean feed and throw it into filth for the pullet to

This eight-foot-square pen is the world of these 50 pullets until they are ten or twelve weeks old, when they fill the two perches and at again have more room and are divided into two pens, making 25 to 50 pen. On the outside of this pen is a feed trough under the projecting of which extends over three feet and keeps the rain from blowing too much into the open front. The pullets eat from this trough by sticking their heads through an opening. Thus they cannot get into the feed with

be opened in feeding and watering.

The dry mash is composed of four parts ground wheat, one part ground corn, one part ground oats with hull sifted out (when not too high one part beef cracklings), half part soy bean meal, half part linseed meal, half part charcoal. Many would say that this is too rich for young growing pullets, but where they have a mixture of grains in the compartment of the hopper adjoining they will eat only enough of this dry mash to balance their ration. The feed trough on the outside is filled twice daily with fresh, crisp green feed. This can be alfalfa, kale, green barley, beets, cabbage, chard or rape, and the greater the variety the better. Be sure they have this green feed 365 days in the year, including the fourth of a day. Don't under any circumstances attempt to keep hens without plenty of green feed. To have that in California means that you must irrigate. And you must have your poultry ranch located where water is cheap or you can never succeed. If you have no water for irrigation, or if you have not plenty of it, sell out and get the right location.

A Prize Winner at San Jose in '16 and at Chico in '17  
The Barred Rock illustrated above is the property of W. B. Carpenter of the B. C. Ranch.

their feet and must take it in the easiest way possible. They also have a feed hopper upon the side of the wall that holds a sack full of dry feed in one compartment, and a sack of mixed grains in the other. The platform to this hopper is 18 inches from the floor, so they must jump up to feed. They must also jump up to the perches above the feeding board, and this continual jumping up and down gives them exercise as well as entertainment. The water bucket is on the outside with a feed trough so that no doors need

For goodness sake, do not attempt to raise poultry on a dry, poor, barren place, for it cannot be done. I know, for I tried it early. You must have plenty of water or the time using it will not pay for the results. There is plenty of good, cheap water near good markets if you will find the right locality.

The pullets stay in these eight-foot-square pens with open fronts during their first laying year. They have everything before them to eat all the time and fresh air, sunshine and a deep, sandy ground floor to roll and dust in, and are absolutely better off than any hen that ever roamed the wide world outside. They eat, drink and grow, and when they arrive at the laying age it is simply a sociological principle; their mind is on their business, eat, drink and lay; that's their daily routine. They have no other amusement and can specialize. They eat to digest, and digest to lay, and as their parents were heavy eaters before them and made eggs out of their food, they have that tendency and have it accelerated. Each year the tendency to digest and lay grows because habits make tendencies and tendencies in time become traits.

We must remove every obstacle that would hinder the development of this well-bred pullet from the breeding stock to the day the first egg is laid. System, method, exactness and a fine adjustment pay in the breeding of heavy laying hens.

We have made a wonderful progress in developing heavy layers in all parts of the world in the last ten years. The 200-egg hen is no longer a marvel. We have already reached the 300 mark, and are still progressing. Will there be a limit? When we cease to wonder at the 300-egg hen will there be a 400-egg hen to create new sensations? I believe there are no bounds in development. Evolution is a wonderful process, and with the plastic White Leghorn hen man can have an absorbing game in watching the advance from year to year.

### TIPPECANOE

Written for California Cultivator  
By L. M., Lancaster

THE youngest boy came lugging home one afternoon a plump little brown puppy. The mother dog was a collie and her litter of four all resembled her but this little brown one. For fear of hurting the sale of the others this one was to be killed if a home was not found for him. "Please let us have him for our own," the children pleaded, so their father and I talked it over, and as we had recently moved from Los Angeles to a ranch and had no dog we consented for them to keep this one.

Try as they might, no name seemed good enough, and they came to me to help them. As I looked over the little brown puppy I discovered he had a white spot between his fore paws, and also the tip of his tail was white, just a few white hairs, I should have said. So I said, "What is the matter with calling him Tip, or Tippecanoe?" I looked at the oldest boy for his approval, for he was suggesting such names as Brown Eye and Brown Boy, and it was at once settled. Tip it was, but more appropriate would have been "Roly-poly," for he rolled over and over when his fat, short legs tried to catch up with the children at play.

His training commenced among the rabbits, where he learned to help catch the rabbits that would work the door of the hutch open and wander out. He never was known to injure one. Often he would sit and watch them through the wire. They seemed to interest him, and the mother rabbits looked upon him as a part of the fixtures, even when he put his nose in their faces as they begged at their doors to be fed, often licking their noses, which greatly amused the children.

His puppyhood days seemed never to end; from one prank to another

he went. My washing on the line to be carefully watched. There were holes all over the flower beds, with the geraniums bordering the path were gnawed down one by one as a beaver had been at work. When he was half grown the boys found a half-starved gray kitten nearby in a gum tree grove. I was afraid for the safety of Gray Boy, as the boys named the little Gray kitten, but we saw there was nothing to fear. Tip from the first let it sleep in his kennel. It nestled close in his arms and was content, and many a morning he would deliberately take the kitten up by the back of the neck and carry it to a sunny place in the yard and give it a washing with his tongue, holding it between his paws. Its cries and growls sometimes were so rebellious we would have to bring the kitten in out of his reach. He always seemed to look upon the helpless kitten as his individual plaything, but as Gray Boy grew older he would climb one of the pepper trees by the house to avoid too much of the caresses.

When we became Mohave Desert pioneers we brought Tip with us. The children would not part with him as we grown-ups were as fond of him as they. And it was well we did; he needed him for company, having no neighbors within three to five miles. He had a way of curling his tail away from his teeth when you talked to him that was a near smile. He was so human in ways of obeying us we never called him in the manner one calls to a dog; all that was necessary was to speak his name. I believe his obedience was due to always being kindly treated.

How he missed the children when they all were in school! He would watch the road that led to the school house. When he sighted them in the distance he would bound away through the sagebrush, meeting them a mile or more from home. Taking him in the buggy they would feed him what remained of their lunch. He followed the older boy wherever he went, at times warning him of a snake by leaping in front of the boy and pouncing on it. Although it was only a gopher snake the rattlers were everywhere and it was well he was watching. Many the chase they had after jack rabbits and cottontails that would run through the wire netting fence in the alfalfa field, catching them and holding on till someone had taken the rabbit, which was always alive, even bruised, and it was at this spot he met his death.

One Sunday morning not long after Tip followed the youngest boy around the rabbit traps, while the older boy and his father cut alfalfa for the hogs, with the scythe, near the fence. Almost the last swath cut, old leaped a jackrabbit that had hidden in the high alfalfa. Not knowing Tip was near to get the rabbit, he pitched the scythe at it, but almost the same time Tip had seen it and bounded past in pursuit, only to be caught as the scythe bounced off the ground, cutting his poor head from left ear to throat.

Some men were out hunting on Sunday, among them a doctor. He looked poor Tip over and shook his head. In the meantime the boys had come to me for bandages and salt to stop the bleeding. Getting what they were sent for they had only gone a few steps when we heard a pistol shot. Without being told, the children knew what had been done. It had been necessary to kill him to avoid long suffering. Then, as we realized their pet would romp with them no more, they gave way to such grief as only children can feel.

As the sun sank to rest over the mountain the boys, with the help of their father, laid their pet in a grave the boys had dug during the day. Then the two girls put bouquets of alfalfa blossoms on the mound. There are no other flowers to be found on a new desert ranch. On a few days ago some friends in the city sent the children a full-grown shepherd dog, and they seem, in a way, over their loss, but when I came to naming the new pet I learned otherwise. The youngest girl said, "Oh, let's call him Tip." "No," said the other three, as a shadow crossed their faces. And I knew for the first time there was but one Tip.

**WAR BREAD**  
Written for California Cultivator  
By Mrs. Guy Halley

**R**ICE, whole wheat, bran, rye flour, buckwheat flour, corn meal, potatoes and oatmeal may all be used successfully in war bread.

Oatmeal bread is very good. Use your favorite bread recipe and use one-quarter oatmeal and add half cup molasses. You'll be surprised at the tasty golden brown loaves.

Rye nut bread is another variety of war bread and easily made. Cream well one cup white sugar and one beaten egg. Add one and one-half cups sweet milk. Sift together two and two-thirds cups white flour, one and one-third cups rye flour, four heaping teaspoons baking powder and one teaspoon salt. Add to liquid mixture and lastly add one cup ground nut meats. Beat well and place in greased tins. Let rise 20 minutes and bake.

Bran bread is delicious as well as very wholesome. It may be added to your favorite bread recipe, adding one-fourth in place of white flour.

Try making yeastless whole wheat bread. Two cups buttermilk or sour milk, one teaspoon soda, one tablespoon sugar, one teaspoon baking powder, one teaspoon salt and four cups whole wheat flour. Beat well and bake one-half to three-fourths of an hour.

Another satisfactory war bread is made from rice. Three-fourths cup lukewarm water or milk, three-fourths cup uncooked brown rice, two teaspoons salt, one tablespoon sugar, one tablespoon shortening, one cake compressed yeast and six to eight cups whole wheat flour. Cook rice with one teaspoon salt till tender, letting it absorb all the water. Place sugar, salt and fat in mixing bowl, add one-half cup of liquid. Add yeast dissolved in one-fourth cup of the water and two cups flour. Add lukewarm rice. Beat this sponge well and let get very light. Add remaining flour. Let rise till double its bulk, put in two loaves and let rise to top of pan. Bake.

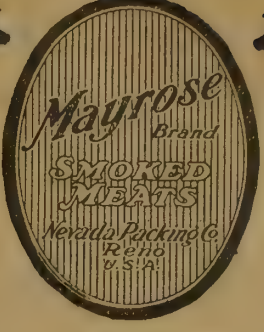

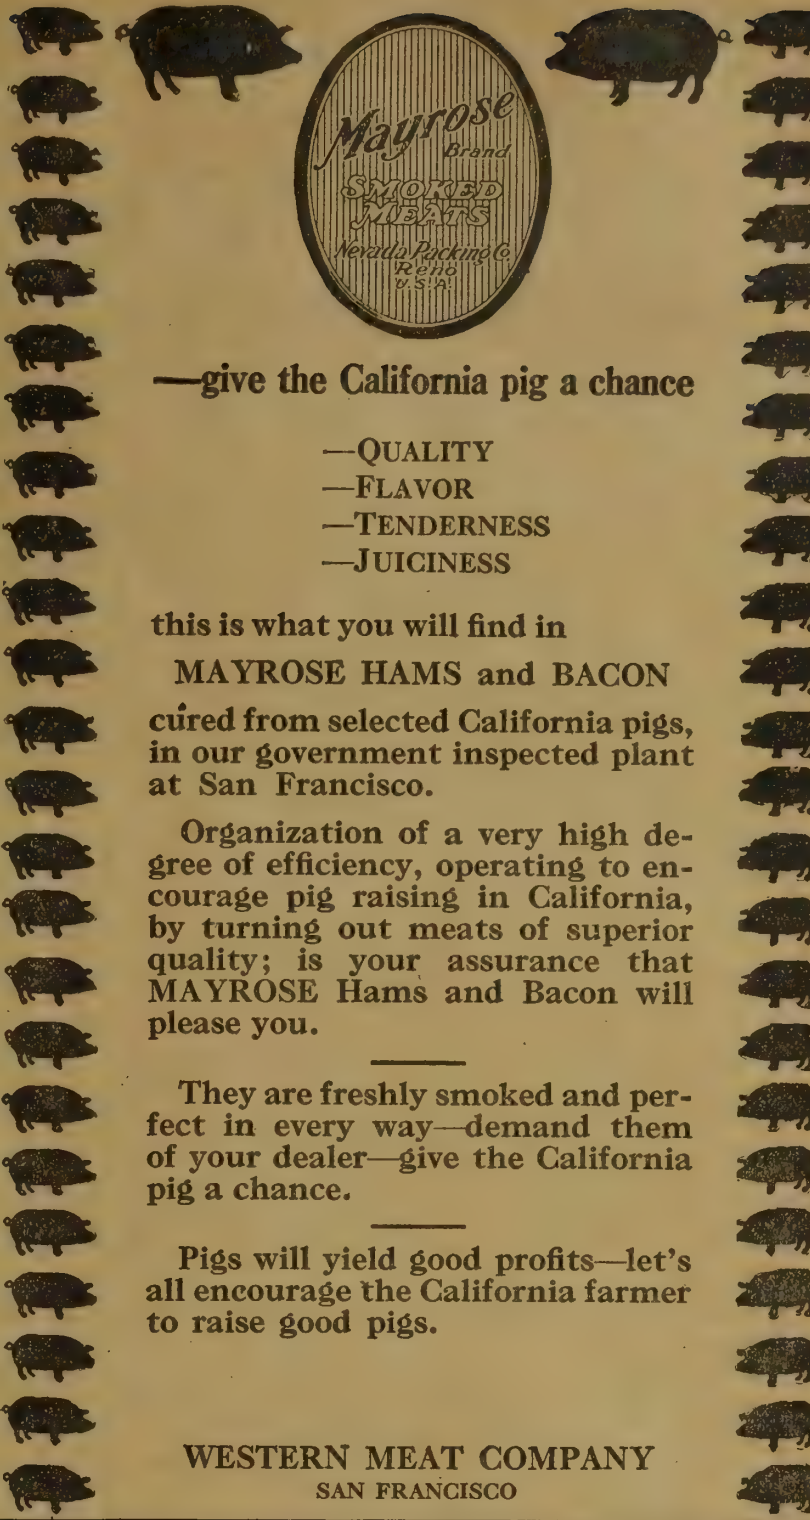

Potatoes are a good flour substitute. One cup lukewarm water, three pounds potatoes, five to six cups whole wheat flour, three tablespoons sugar, two cakes compressed yeast, dissolved in one-half cup water, and one tablespoon salt. Boil potatoes with skins on till soft. Peel and mash thoroughly while hot. Add dissolved yeast to lukewarm potatoes, rest of water, salt, sugar and a scant cup of flour. Mix and let rise at 86 degrees Fahrenheit. After two hours knead in thoroughly the remaining flour. Let rise till double its bulk and place in pans. Let rise again till double and bake at 380 to 400 degrees Fahrenheit.

Bran muffins are quickly prepared for breakfast. One cup bran, one cup flour, one well-beaten egg, one-fourth cup molasses, four level teaspoons baking powder, one-half teaspoon salt and one cup sweet milk. Sift dry ingredients into the liquids and beat well. Bake quickly.

**A ROOM FOR THE BOY OR GIRL**

Sometimes we hear the remark, "Why don't you keep your toys out of my way? They are always where they should not be." Are you sure there is a place for them to be kept where they are not "always in the way?" Any little girl will take pride in having her small bureau or trunk in her own room and can easily be taught to put her doll and other things away in their proper places when through playing with them. Then, by so doing, she is laying a foundation for neat and orderly housekeeping in later years. And what boy does not enjoy having his chest of tools or building blocks in a room of his own where he can work and build to his heart's content without the older ones disturbing him? He can also be taught that everything must have a place and must be put in that place when he is through with them.

To clean coffee stained linen soak in cold water to which has been added a little borax. All coffee, chocolate, tea and fruit stains will disappear if boiling water be poured over and through the spot before the linen is washed. It is best to do this while the stain is fresh and damp.

**—give the California pig a chance**

**—QUALITY  
—FLAVOR  
—TENDERNESS  
—JUICINESS**

this is what you will find in

### HOGS

THESE PIGS PRODUCE THE BACON Ordinary thoughts in ordinary words, Like random shots at flocks of birds, Seldom bring home the bacon. Ordinary Pigs in ordinary herds, Like random shots at flocks of birds, Seldom bring home the bacon.

#### RED ROCK RANCH.

Breeders of Registered High Class Duroc-Jersey Hogs. A long, smooth, medium size, bacon hog. Why not the best? Give them a test. Our Specialty—yearlings—every month in the year. Shipped on approval. Brood sows, gilts and mature boars for sale. Glen Ellen, Cal. R. G. Wickham, Owner

Registered Durocs—We offer for sale a choice service boar out of a daughter of Modesto King and by a grandson of Burk's Good E. Nuff; young sows and boars out of Model Queen of U. F. and by a son of Golden Wonder; young sows and boars out of a granddaughter of John Orion and sired by a son of Model Col.; three young boars out of a great sow of Crimson Wonder breeding and sired by a son of King's Col. Every one cholera immune by the simultaneous method. Registered, crated free of charge. If you cannot visit us write for prices. Derryfield Farm, I. O. O. F. Building, Sacramento, Cal.

A High Class Berkshire Boar for sale—Mayhews Leader 11th, sired by World's Champion Grand Leader 2nd, age 2 years, 1 month. Weight in breeding condition about 750 pounds. A very large, smooth, heavy boned hog, and an excellent herd boar. Guaranteed in every respect. Price very reasonable. Dallas Bache, Hollister, Cal.

Chester Whites, the Billiken Brand.—Your duty is to raise more hogs and increase the meat supply. The demand for pork exceeds the production. Get started with some of these Chesters; 3 bred sows farrowed in April, 1916, due to farrow in September, and October; 18 October gilts bred to farrow in October; 3 October boars ready for service. All first class in every respect and good enough to fit and show at the different fairs this fall. All are cholera immune and will be registered free. Write for price list and booklet. C. B. Cunningham, Box C, Mills, California.

Grape-Wild Farm Berkshires—World's Fair Grand Champion Grand Leader 2nd heads our herd, not only himself a champion but the sire of champions. At the 1916 California state fair his daughters won all of the senior sow classes including the grand champion sow. At the 1916 Oregon state fair a Grand Leader sow was junior champion. We are offering a number of choice boars of exceptional breeding and are also booking orders for fall pigs. A. B. Humphrey, Escalon, San Joaquin Co., Cal.

Large Yorkshires—Choice spring boars, gilts and weaned pigs from champion sow P.P.I.E. or from breeding of champion boar and sow Sacramento, 1916. If you see them grow you will like them. Riverina Farms, Paradise Road, Modesto, Cal.

Superba, World's Grand Champion Poland-China boar and one of the greatest sires of the breed. Spring boars ready for service, also few sows bred to this noted sire, reasonably cheap. Rough's Greenfields, Arlington Sta., Riverside, Cal.

Wanted—Farmers, orchardists, livestockmen to use classified liner advertisements like this. Thousands of people read every ad and the cost is only 3 cents per word per issue, minimum 35 cents. Extra lines of white space above and below cost only 16 cents per line.

Duroc Jersey Boar for sale—Two years old, from Kansas City. \$50.00. Cost \$100.00 when pig. Excellent sire. Object, change of blood. Two Berkshire sows, one with pigs. Jersey Queen Farm, San Jose, Cal.

Poland Chinas—Three litters by a Big Orange Wonder Boar. Dams from Eastern stock, \$15 to \$20 at weaning time. Registered, crated and transferred. N. M. Lester, Gridley, Cal.

Poland-Chinas—A number of magnificent young boars for sale, just ready for service. Don't overlook my offering of splendid sows at the Poland-China sale on October 17 at Hanford. Will Bernstein, Hanford, California.

Rancho Rubio Durocs.—Nothing to sell at present. A fine bunch of gilts and a few extra good service boars for this fall. Elmer Lamb, Ceres, Cal.

Big Type Durocs. Well grown out February and March pigs of either sex in any quantity. We ship only the tops and butcher the culls. F. M. Johnson, Napa, Cal.

Most Money in Duroc-Jerseys. Bred sows and yearlings, either sex all the time. Delta Farm and Live Stock Co., Colton, Cal.

Duroc Jerseys—A few choice gilts for sale sired by Grand Golden Model. Peters, Lamson & Walker, Devore, San Bernardino County.

Large Yorkshires—The ideal hog for the progressive farmer. Service boars and fall pigs, both sexes, for sale. A. L. Tubbs Co., Calistoga, Cal.

Large Type Poland Chinas are prolific and profitable. Can furnish boars any age at reasonable price. J. A. Crawshaw, Hanford, Calif.

### HOGS

Citrus Fruit Market

Los Angeles, Sept. 5, 1917.

Well up toward 100 cars of Valencias  
daily are going forward. The best of it  
is the market receives them all gladly.  
Especially fine stock covered around  
\$5.00. Sales made in the auction range  
from \$2.00 to \$4.75.

Lemons continue rather dull. They  
have dropped the abnormal prices,  
though some sales are made well up to-  
ward \$7.00. The greater number, range  
from \$2.60 to \$5.00.

Shipments

Shipments of oranges from Southern  
California since November 1, 1917, 37,397  
cars, lemons 7356, total 44,753; to same  
date last season oranges 29,292, lemons  
6385, total 35,677. From Central Califor-  
nia to date this season oranges 5044, lem-  
ons 164, total 5208; to same date last sea-  
son oranges 5398, lemons 146, total 5544.  
From Northern California this season or-  
anges 845 cars; to same date last season  
oranges 610, lemons 1.

Alfalfa Land for Dairying

Land already checked, leveled and in good stand of alfalfa. For sale on  
easy terms in tracts of 20 acres and up. Also first-class orchard and bean land.

BRENTWOOD IRRIGATED FARMS

Sixty-three miles from San Francisco in Contra Costa County. For prices,  
etc., address

BALFOUR, GUTHRIE & CO., Land Dept., 350 California Street, San Francisco.

# The Premier Sire of the West

His Dam

Pontiac Clothilde De Kol 2d  
She is the greatest producing cow of the breed having more great sons and grandsons than any other cow. She was the first cow to make 37 pounds butter in 7 days, 145 pounds in 30 days and 1271 pounds in a year. No other bull in the West has as high a record dam.

His  
Sires Dam

Pietertje Mald Ormsby  
She has twice held the world's record for 30 days in her class making 35.56 pounds in 7 days and 145.66 pounds in 30 days. The average of the two nearest dams of it were world's records averages for 7 and 30 days in 1912 and 1913 and are still unequaled by any other bull in the West.

## The Merit of His Offspring

At the Steven Bros. sale 59 sons and daughters of "It," mostly calves sold for an average of \$579.83 apiece, six of his daughters bringing from \$1000 to \$4000 apiece. This average is unequalled by the offspring of any other bull in the world for a like number at the same age.

His first seven daughters to freshen have made splendid records, one 23.92 pounds, another 21.05 pounds, three others over 19 pounds and the other two 17 and 15 pounds, all as two year olds.

## His Opportunity

"It" has had an unsurpassed opportunity, being used for four years exclusively on all the daughters of King of the Pontiacs the greatest sire of the breed.

We are giving "It" the greatest opportunity of any sire in the West, using him altogether on all the best cows in our herd which include eight 30 pound cows and forty over 25 pounds.

## Important Announcement

In some of the fall sales we expect to offer a number of splendidly bred animals in calf to "It."

This is one of the most important announcements made in connection with public sales in California and should be borne in mind by every purchaser.

## Buy from a Producing Herd

In the last year we have made  
More 31 lb. Records  
More 25 lb. Records

More 20 lb. two year old Records  
More State Records than any  
other breeder in the State.

## the Cultivator Poultry Book

## Poultry for Profit

by  
Jean A. Koethen

## PACIFIC POULTRYCRAFT SAYS:

A brand new book on poultry published by that old reliable Cultivator Publishing Co., Los Angeles. The author, Jean A. Koethen, has really written a poultry book worth while. The different subjects are treated with a directness that is refreshing, after reading so many books that say so much and mean so little. The book is intended for the beginner and farmer, but we commend it most heartily to anyone interested in poultry; whether for pleasure or profit; it is full of good things from cover to cover.

## THE LOS ANGELES TIMES SAYS:

The author of this manual has covered the subject fully, giving the salient features and practices of an enlightened poultry culture as it applies to California conditions, based largely on personal experiences, and intelligent compilations from recognized authorities.

## THE RIVERSIDE PRESS SAYS:

The Press is in receipt of a copy of this work, called "Poultry for Profit," and has no hesitation in commending it to either the "backlotter" who keeps a few chicks for his own pleasure, to the fancier who works to the "standard," and to the commercial poultryman who makes a business of poultry culture.

Before its publication, the manuscript of "Poultry for Profit" was submitted to practical poultrymen, to experts and simple poultry enthusiasts, and all agreed that it was more comprehensive, more readable and vastly more helpful than any similar poultry book yet published. It covers the widest range, discussing breeds, feeds, diseases, housing, marketing and answers the thousand and one questions that even the expert poultryman sometimes has to ask and the amateur is ever asking.

## THE PORTLAND OREGONIAN SAYS:

The Weekly Oregonian takes pleasure in recommending this book to its readers, for it is "the right stuff," told in the right way by the right woman.

## "Poultry for Profit"

Gives more practical knowledge of every branch of the poultry business in a more concise and simple manner than any similar book published. With the knowledge gained by a study of this work experience in the poultry business is not as necessary. Through its guidance obstacles are overcome before it is too late.

## An outline of its valuable information—

Making a Beginning	Housing and Yarding	Incubation
Brooding	Feeding	Breeding
Marketing	Sanitation and Hygiene	Fixtures, Conveniences
Diseases and Vices	Ducks and Geese	Turkeys

The book is 5½x8 inches and contains 12 chapters, with over 225 pages of text and 18 pages of illustrations, printed on eggshell book, binding full cloth vellum de luxe, at the price of one dollar postpaid.

\$1.00 Postpaid to any address.

\$1.75 with the California Cultivator, weekly, one year.

The Cultivator Publishing Co., Inc.

115-117 N. Broadway

Los Angeles, Cal.

## Will You Be There?

If you are you will see the result of years of experience in Tractor Construction. You will see a Tractor that does not cost a fortune to keep in repair; a Tractor that is only 53 inches wide, 45 inches high and 96 inches long; one that will turn in its own length pulling its entire load; a Tractor that will absolutely adjust itself to any ground no matter how uneven without strain on the machinery; a Tractor that is dust proof, all parts running in oil; the pulliest Tractor for its size of anything yet constructed. You will find all these vital points embodied in the New Lambert Chain Tread.

Wm. Gregory and Sons

L. XLIX No. 11

LOS ANGELES: September 15, 1917

One Dollar Yearly

## California State Fair, 1917

First Look In of the Cultivator Bunch. Fine Fair. Some Classes Smaller Than in Former Years, More Larger and Some Entirely New Features

WHETHER it be because of natural growth of the state and its agriculture or whether because this is War Year and patriotic appeal and even other possible appeal has been to produce more, grow more to ourselves and allies and a starry world, or whether because of other because I know not, but it is this is California's greatest fair year. Its greatness may be somewhat enhanced by a swelled head and by sleeplessness and the most rascal racket ever listened to. This word (including that first out-erously long sentence) is being writ- at 1:40 a. m. (yes, in the morning) Sunday September 9, 1917), which says that it is somewhat after the of the ushering in of the birth- of the state of California and, be- me, (that isn't slang, I'm just- ing to be impressive) Sacramento's element has done some usher- It is likewise my own birthday perhaps I should feel honored at a reminder, but, honestly, the ket, now more than two hours old, somewhat wearing. There are now bands, one brass and one fife drum, with tin horn and old can

varieties, out on the street playing "Oh Johnnie," and both those bands are long on wind and water—or some- thing else wet.

But, more seriously, Sacramento was never so decorated and illuminat- ed and bedecked: soldiers, marines and things military are everywhere; airplanes are hovering over the fair

grounds continually, ready to spy out approach of the enemy—or may be a streak of hot weather. The weather yesterday (Saturday) was fine.

Every room in town is filled. It's now rooms in private residences or a bench in the park. This condition gave a couple of San Francisco men an opportunity to remark in a hotel

lobby last night that "This fair should be held in a larger center where the crowd may be accommodated."

San Francisco and the bay section has always looked at the state fair with longing eyes, but Sacramento has held its grip and probably al- ways will. But she should certainly build a bunch of barracks or some place to sleep its crowds.

First three days of the fair are given over almost exclusively to the Native Sons and Daughters—N. S. G. W. and N. D. G. W. This is announced as the last year in which other towns of the state are asked to withhold all local celebrations and unite with Sacra- mento in honoring the day and the fair.

The old "Main Building" horticul- tural building burned a year ago with all its exhibits. It has been replaced for this year with tents and frame buildings. They are far from impos- ing but answer well. They are filled with county and educational exhibits, much like those of former years, but there are new features and proofs of the state's productiveness which are now and then surprising.

The woman's fire proof building has Continued on Page 274

A Type of County Exhibit

## The Day of the Tractor

California Farms Need More Power and More Equipment. Interesting Observations Made at Eastern Tractor Demonstration. Tractor Improvement. Valuable Hints on Care and Management

THE father—and, we may add, the mother—of tractor demon- strations is Fremont, Ne- braska. For several years demonstrations have been held in that section and from their in- fluence many others in other sections of the United States. The tractor peo- ple this year, however, have largely entered their energies in the one great demonstration at Fremont. It is held in August and thousands of people attended and studied tractors and tractor drawn implements under such favorable conditions as are sel- dom offered.

California is a long way from this central demonstration, so this year in addition to the demonstration be- ing held in the state fair grounds this week the Southern California Trac- tor Engine and Implement Dealers' association will hold September 18-22 at the Vail ranch just outside of Los Angeles a demonstration which should afford the student of farm power and farm implements opportu- nity to get a wonderful fund of infor- mation. In view of this special value given to some of the facts develop- ed in the Fremont demonstration. We therefore quote from an article writ- ten by F. M. White of the Wisconsin college of agriculture as to lessons learned at that demonstration:

"The standard tractor has not ar- rived. There is, however, some ten- dency toward standardization, but not

as much as one would expect to find after the tractor demonstrations of 1916 and the experience of the past three or four years in the building of tractors. Just exactly how to define a freak tractor is not at all easy.

with every conceivable arrangement of the wheels. There were one, two and four wheel drive machines, all of which were doing excellent work in the field. There is, however, emerg- ing, and it is quite distinct, a resem-

generally recognized as the standard type.

This year for the first time at a demonstration the four wheel drive machine was shown. It attracted considerable attention although it is quite doubtful if it has been perfect- ed. There are so many complications in transmitting the power to the wheels that it makes this sort of de- sign expensive although there is no question but that a four drive wheel machine has many advantages over other methods of driving.

"The writer believes thoroughly that every idea contributed to the tractor is a valuable asset to the tractor industry, but, no doubt, many ideas will be abandoned very soon. Farmers attending such a demonstra- tion cannot help but be confused by such a wide variety of types. At best, they are skeptical about the tractor's lasting qualities but when they are sure that a certain standard type is developed the majority of them will be prospective tractor purchasers. As one man expressed it: 'Farmers and horses are hard to part.' So the man- ufacturers of tractors must be par- ticular to build a machine that will stand up under the severe strain of farm work.

Tractors Well Built

"Anyone who has followed the trac- to situation can see that they are be- ing built better in every way than even

"Somewhere in France"  
A "Tank" on the Battlefield.

Perhaps what we may speak of as a freak tractor now may eventually prove to embody ideas worthy of very careful consideration. At any rate, more new ideas should be encouraged rather than discouraged in order to evolve the final tractor.

"There were shown again this year, two, three and four wheel machines

blance of the future standard type of tractor. It is the four wheel machine with two rear drivers and two front guide wheels. There are also a good many three wheel machines with two rear drivers and one front guide wheel. This differs so little from the four wheel machine that the three or four wheel machines are now most

last year. Better materials are being used throughout. Gears and other wearing parts are made of higher quality steel, and where necessary are enclosed in a tight case and running in oil. The tractor manufacturer who does not soon recognize the importance of enclosing the main gears in a dust proof case is bound to receive a severe jolt when this present big demand for tractors is over. There is no question but that most companies now can sell every tractor they can make. Just as soon as the war is over and nations readjust themselves, competition will be keener than ever before, so it behooves those in the tractor game at the present time to advance with the tractor industry. The fact that many dealers and farmers already are ordering tractors a year in advance, indicates that this year's supply is practically exhausted. This is a peculiar situation in such a young industry.

#### Plows Being Standardized

"Colonel Bradford Brinton says, in regard to the tractor situation, that he was the last man to give up horses when the automobile was developed

but that he expects the tractor to replace the farm horse and the tractor become the greatest manufacturing industry of this country. When asked regarding the most popular and prac-

the rigid beam construction type. Where there are more than four bottoms, each bottom should be independent of the other bottom so that they can conform to the uneven ground and

Tractor with Drag Harrow

tical size of tractor, he stated that the three and four plow machines were winning out.

"The construction of plows is being rapidly standardized. The two, three and four bottom plows are of

each plow maintain an even depth. There are a few cases where five plows can be built and rigidly fastened together, but this should be used for level ground only. The method of hitching to the plow should be stan-

dardized. The height of the bottom varies on some tractors. The companies have conformed in the majority of cases to the wishes of plow manufacturers so that the farmer will experience comparatively little difficulty in hitching any make plow to a tractor. Some of the new companies, however, think only of tractor and difficulty arises when attempting to use it for all types plows.

#### Power Implements

"Tractor cultivators, tractor plows, and tractors pulling manure spreaders and binders were a new innovation in this year's demonstration. An Illinois company demonstrated use of motor machinery in raising corn crop. One size tractor was used for plowing, a motor cultivator for disking and preparing the seed bed, followed by a motor cultivator plowing corn and another one plowing corn. These outfits handled remarkably easy and were of much interest to the corn belt farmer. They demonstrated the possibility of growing corn by the use of mechanical power only.

#### Use Tractor for Belt Work

"One important phase of tractor construction is being recognized by most of the manufacturers. That is the use of the tractor for belt work. Mr. Yerkes of the United States department of agriculture, addressing a meeting of more than 400 tractor manufacturers and newspaper men, said: 'From the investigations made by the United States department of agriculture, belt work for the tractor exceeds that of any other use. A tractor that was not used for belt work on the road very extensively—over three or four per cent.' Mr. Yerkes also stated that from the farmer's viewpoint service is the most important item for tractor manufacturers to consider at the present time; that the average farmer is a first class operator, and that so many manufacturers make very strong statements regarding how easy it is to take care of and to operate the machines.

#### Take Care of Tractor

"It is absolutely impossible for a farmer to depend upon the manufacturer for every little trouble which may arise with his machine. The operator should form a regular plan of oiling and caring for his tractor. The idea that a tractor does not need any care is false. It will pay any farmer to give about one-half hour each working day to see that everything is in first class shape, properly oiled, and that no parts are unduly worn. The tractor manufacturers are all under obligation to the farmer to assist in his education. Service is something that the tractor manufacturer will not give free. If he does not charge the owner of a machine for assistance when called upon, one can rest assured that this cost is contained in the original sale of the tractor. Some men will require more help than others. It is not fair to hold a good operator for a company to include in the sale price of his tractor money for service. In many cases one man would use nearly all of the service of two or three or maybe more tractor owners. There is no doubt but that the farmer will have to pay for service due to carelessness and lack of education in the handling of his machine. As the tractor industry develops dealers will be established and educated so that they may help instruct the owner of the tractor in caring for his machine.

## Lowest Cost Per Working Hour

Price, in the purchase of a tractor, should be a secondary consideration. Of chief importance are the tractor's dependability, its ability to do all sorts of work, under all sorts of conditions, with a low operating and upkeep expense.

Many years of Caterpillar operation have proved its cost lowest, not only per actual working hour, but also per acre worked. Statistics from hundreds of Caterpillar owners prove this to be so.

Power to pull an unusual number of plows at an unusual depth, versatility in operation, construction that minimizes delays and expense for repairs, make Caterpillar costs lowest, and Caterpillar profits largest.

*We will gladly send you details on all models*

**The Holt**  
MANUFACTURING CO., Inc.

Stockton San Francisco Los Angeles Portland Spokane

"The tractor demonstration as conducted this year seems to have about served its purpose. Just exactly what will be the nature of future assemblage of tractors is impossible to state. Many engineers would be interested in a contest of some sort in

order to settle definitely some points regarding rating and fuels. Whether the arrangement of such contests can be made or not is doubtful. At any rate some definite information or comparative data on various tractors would be of interest to engineers and farmers alike."

tractor. Here there are vast acreages to till and labor is scarce. Full reliance must be placed upon the tractor for the heavy work of plowing, hauling, and harvesting and Western farmers know that in order to place reliance upon a machine it must be of the highest grade.

This is simply cited as an instance of the fact that quality pays. There is probably no piece of machinery that is subjected to severer service than the tractor, and cheap materials and cheap workmanship do not pay under such conditions. But, as already stated, the success of the tractor does not rest alone in the condition of the

tractor when it is sent from the factory. A tractor must be given a reasonable amount of care and attention. It must be lubricated frequently and lubricated with a good grade of oils and greases. Certain adjustments are necessary and all bolts must be kept tight to insure continued good service from the machine. Some of the tractor manufacturers, therefore, have gone so far as to follow up their machines with an elaborate degree of service. This service consists not only in supplying expert engineers or servicemen to make adjustments or repairs which the farmer feels that he himself is not qualified to make but also in supplying complete text books and bulletins of information by means of which the tractor operator may familiarize himself fully with the care and operation of the machine. Still further than this, a school is held annually at the factory. This school session lasts a fortnight, during which time the student may gain a thorough education in tractor operation. The training given is probably more detailed than the average operator would require, but the factory gives this training free to the owners of its tractors on the theory that the more a man knows about his tractor the better success and satisfaction he will have with it.

If a tractor is built for service and is backed by service on the part of

## Tractor's Importance in Agriculture.

Written for California Cultivator By G. M. Walker

**S**UCCESS in agriculture is yearly becoming more and more dependent upon the power equipment owned and the care taken of it and use of it.

The average farmer is too often at a disadvantage because of a lack of good equipment for carrying on his farm work. He knows that no matter how rich the soil, how good the seed, how favorable weather conditions may be, he can do nothing without power and implements. They are essential.

The fundamental importance of farm machinery is that it enables the farmer to produce his crops with less expense, and it also makes it possible for him to handle a much larger acreage. Agricultural authorities have proved that increased crop yields depend upon three essentials: Seed, Tillage and thorough tillage. The tillage, which is doubtless the most important, absolutely depends on power and machinery.

The first and most important essential in farming with a tractor is good business management. It is just as necessary in farming as it is in any manufacturing or business undertaking.

The first and most important part of the power-farming equipment is the tractor. The prospective purchaser should be very careful in buying his tractor to see that he gets one which will be best adapted to his own particular conditions. It is always well to invest with a reliable manufacturing concern so as to be sure of getting a good machine. Above all things insist upon quality. Rather let the price be a secondary consideration. By getting the best it will always be worth and to pay in the long run.

The tractor in the first place means a large investment. The farmer should aim to adapt it to as many different kinds of work as possible in order to make it pay for itself. A large number of the tractors in the field at the present time are used principally for plowing and harvesting. They could be made to perform other kinds of work, such as hauling, harrowing, seeding, road building, harvesting, running ensilage cutters, saw mills, feed grinders, and many other farm jobs. All the drudgery of farm work can be performed by the engine.

Of course there are many different kinds of tractors and many different kinds of men. Some men abuse or neglect machinery and could not make success of the finest tractor ever built, and some tractors, on the other hand, are so cheaply constructed and of such poor material that even the best of care cannot save them from an early trip to the scrap heap.

In the Eastern and Middle West states many of the farmers have been willing to "play" at the tractor game. They have followed the policy of "getting their feet wet" gradually; so, instead of buying a high grade tractor and relying upon it for their work, they have kept all or most of their horses, put a small amount of money

into a cheap tractor and thus have failed to give the tractor-farming proposition a fair trial. Out here in the far West farmers have had to put more complete reliance upon the

This is the way the plows look following the tractor.

*"In Union  
There is Strength"*  
A. Lincoln

**F**ROM the beginning of the Firestone business, Lincoln's advice was heeded by its founder and present head, Mr. Firestone. He saw the power in singleness of purpose, and the roots of Firestone success are laid deep in organization.

The Firestone factory and sales forces everywhere work together to produce highest quality at lowest possible cost. They want Firestone Tires to be universal in use, to reach all the people. They know that motoring reaches its best possibilities when on every machine in all seasons, the equipment is—

**Firestone**  
TIRES AND TUBES

Best from the mileage standpoint, toughness of tread and strength of body. And this toughness is combined with the resiliency demanded for easy riding and car protection.

With the true Abe Lincoln policy of "pull together," Firestone Branches and Dealers everywhere unite to give you maximum efficiency and economy of service.

FIRESTONE TIRE AND RUBBER COMPANY  
AKRON, O. BRANCHES AND DEALERS EVERYWHERE

its manufacturers, this tractor can surely do farm work at far less cost than horses or mules. Detailed figures might be given to prove this, as many tractor owners, particularly the large sugar companies and extensive land owners, have kept detailed comparative costs to prove the economy of tractors over horses. Figures, however, are rarely interesting and figures that might apply in one section would not apply to another and therefore would be valueless.

The best thing for a prospective tractor purchaser to do, who is still

skeptical as to the comparative merits of horses and tractors, is to go to some farmer in his community who owns a tractor and who he knows has given his tractor fair treatment and find out what the owner's experience has been. Better still, go to several owners so that the average of their experiences may be obtained. Almost any tractor agent or salesman would be glad to direct you to such owners, and if he does not you may rest assured he has something to conceal and is ashamed of the record his tractor makes in the field.

## The Day of the Tractor is Here

**E**VERY dog has its day" is an old but true adage. Oxen had their day and then were replaced by faster, more efficient, farm power—the horse.

Now, however, the call for even more efficient farm power to cope with an immensely increased demand for food-stuffs, due in large measure to war conditions, brings the tractor to the front with a rush on an errand not only of mercy for the horse but also to bring even greater production than the overworked horse is capable of producing.

The farmer who fails to consider and understand the trend of the times in this respect will no doubt soon be

classed with the farmer of by-gone days, whose sentiment in regard to the old ox team overcame his better judgment in replacing it with a span of good horses.

When our president told us that the result of the war might depend largely upon the ability of the farmer to produce more crops and that every means at the command of the farmer should be employed to increase production, it seems as if he said almost plainer than words "get a tractor."

Quite naturally the farmer of 80 acres or more is puzzled to know how the tractor can be employed profitably by him. He knows that unless

the tractor will be a profitable investment that he can do more for his country by not buying it than he can with its help.

These tractors make their strongest appeal because of the fact that they do 75 to 100 per cent of the farm work that horses formerly did, thus permitting you to eliminate a large per cent of your horses. When you

If you are a small farmer, keep your eyes open for the tractor that meets the requirements of your farm. Note how many horses the tractor you propose to buy will eliminate. Note how many of the things it will do that horses did before, see if it will cultivate as well as plow, if it will do at least 75 per cent of your farm work without horses and if it

The Tractor Works Successfully in the Orchard

can get a tractor that cuts down feeding expense 75 per cent, to 100 per cent, one that eats only when at work, that starts with you on the first furrow in the spring and plows, discs, harrows, plants, cultivates, runs the mower and binder and fills your silo, you've got a tractor that is as much more efficient than the horse as the modern spinner is more efficient than the old spinning wheel.

man can operate it as easily as a team of horses.

These are the most important things the owner of a small farm must look for when he buys a tractor. If you get the tractor that actually meets your needs you'll agree that the tractor is now going to have its "day" and that when it does have its day, farming will not only hold fewer drawbacks and drudgeries, it will be far more profitable and pleasurable.

## The Hardie Sprayer is Measured by Results

During the past twenty years nearly 15,000 orchardists have purchased **Hardie Power Sprayers**

They have had time in which to test them; time in which to see the added value their use has given their fruit crop; time in which to prove their sterling value.

### Hardie Sprayers

do the big spraying work of the country because they are always dependable have the big capacity and the high pressure required built into them by the use of the best materials. Careful simple design has brought freedom from trouble and complications.

### WRITE for 1918 Hardie Spray Book today

It will tell of this modern, dependable sprayer. With the new Modern spray gun that will interest every fruit grower, this will be demonstrated at the Tractor Show, Los Angeles, Cal.

**HARDIE MANUFACTURING CO.** Portland, Ore. and Los Angeles, Cal.

## Will There be 100,000 Tractors in Use Next Year?

**T**HE best tractor authorities in America estimate that there will be over 100,000 tractors in actual use by the end of this year. Yet there are thousands of farmers who still believe that the tractor will never be perfected to a point where it will be a profitable addition to the equipment of the small farm of 80 to

do a large percentage of the work that horses now do so you can eliminate most of your horses. A tractor which will cultivate as well as plow that will disc, harrow, run the mower and binder, besides doing dozens of belt work jobs.

There's the point! The small farmer can't profitably keep both a tractor and horses, so the tractor to be

Where the Big Tractor has a Chance  
Virgin Soil on the Desert

250 acres. This most certainly is a mistaken idea, because even now there are tractors on the market which are fitted for use on the smaller farms and will prove a most profitable investment.

People once said the steam engine was an impossibility, that the telephone would never be of practical use, that Darius Green's experience with his flying machine spelled defeat for aerial navigation, but nevertheless all these things are now accepted as a matter of everyday life.

How much simpler and more probable then is the small tractor of light weight which can be operated by one man as easily as a team, that will

success on the farm of 80 to 250 acres must do a large percentage, or better, do all the farm work without horses.

When a tractor like this is offered to the small farmer he will recognize its great advantages instantly, he will want it without argument, because it will mean to him that the drudgery and most of the drawbacks of farming will be eliminated and that a new day has dawned which will mean bigger crops, greater profits and more pleasures in farm life than the farmer has ever before known.

"More fruit" is what the soldiers at San Pedro are appealing for.

## Fertilizers and Tractors

How can we grow greater crops with less labor on the same amount of land? That is the question to which the big fast-working, one man driven tractor is

### ONE-HALF THE ANSWER

—the other half is to fertilize all your soil with

### HAUSER'S ORGANIC FERTILIZERS

and increase the production.

Compared to prices of the crops they help to produce Fertilizers were never so cheap as they are today.

Authoritative tests have demonstrated that as high as 50 per cent increase in crop production may be expected from the proper use of fertilizer. Think what that means on an acre of LEMONS or BEETS or POTATOES.

A 5 per cent increase in most any crop will pay all the fertilizer expense. You can make your crop increase pay for both your tractor and your fertilizer and both will do your land good and help win the war.

# Don't Miss the Tractor Demonstration

Written for California Cultivator

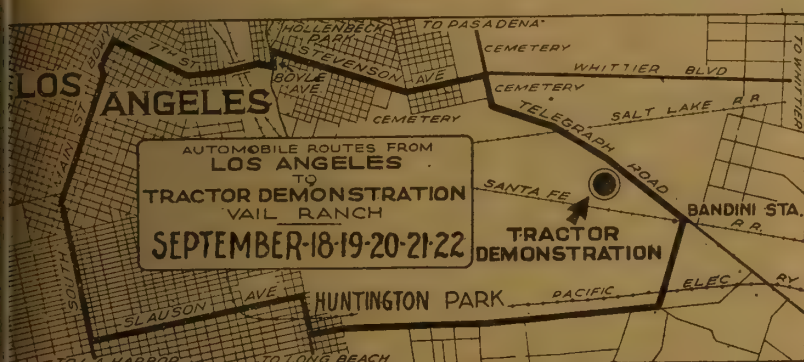

OMING events cast their shadows before," and the Second Annual Demonstration of the Traction Engine and Implement Dealers' Association is casting a big shadow on minds of thousands of wide awake farmers, agriculturists, purchasing agents and master mechanics. The event is selected, September 18 to 22, convenient as they fall at a time when there is a lull in farming operations everywhere. The location is meeting the approval of all as there are many routes which converge at the demonstration field on the Ranch on Telegraph Road, two miles east of the end of the Stephenson Avenue car line from Los Angeles. Not only are the railroads offering lower rates from all points in California, Nevada and Arizona, but also reaches the demonstration field admission is free, there will be parking space for thousands of automobiles, and, last, but not least, there will be free lemonade to those whose throats are parched from following the tractors over the 650 acre field. To avoid the necessity of making a long back and forth to town for lunch, there is to be a very good cafe on the grounds where regular meals will

living must be put on a strictly anti-waste basis, they also realize that this does not mean the curtailment of expenditures that will go toward putting money into reliable channels. If there is any one thing in the country that will tend to put every ranch and farm on this anti-waste basis, that one thing is a tractor. A man can cultivate more land at less expense and in less time than he ever before thought possible, and his yield will be astonishingly greater and of better quality.

These are facts that are being proven every day in the week, and this demonstration is being held for the purpose of bringing tractors, and tractor drawn implements before the public eye in such a way that everyone will realize the importance, and, one might almost say the necessity, of tractor farming to the agricultural world today.

The officers of the Traction Engine and Implement Dealers' Association of Southern California are O. H. Stevens, president; H. L. Marsh, vice-president; W. L. Cleveland, secretary; Alex McCluskey, treasurer; R. M. O'Neill, manager; directors, O. H. Stevens, Alex McCluskey, W. S. Gregory, F. Johnson, R. Dunsmore.

The members of the association are

served. The administration tent will have telephone and telegraph facilities, also a registration desk. Restrooms have been provided for women and children.

The exhibition tent will attract the greatest attention of everyone, for it will house a most comprehensive display of almost everything that might in any way be necessary or of educational value to the visitors. There will be booths for reputable realty firms, ready cut bungalows, food products, fuel and lubricating oils, motor trucks, automobiles, electric motors, radios, and many other varied industries will be shown.

The whole affair will be of intense educational value coming as it does at this crucial time when every true American citizen is imbued with the spirit of "doing his bit." To the farmer this means but one thing—to increase his production and his cultivated acreage to the fullest extent. This can only be done by introducing tractor farming on every ranch in the country, and at the public demonstration that will be given every afternoon of the five days the visitors will be shown just how the work is done. Prospective visitors are urgently requested to bring their list of doubts and questions with them, and they will find a corps of efficient farm and tractor men who will be able to clear up most of their difficulties.

Every ranch has certain peculiarities of soil that require radically different treatment from that given, perhaps, to the neighbor's land. These local and locality differences should all be considered before buying a tractor. There is many a man who has purchased a tractor and then become disappointed because it did not come up to his idea of what a tractor should accomplish, simply because that man did not exercise ordinary common sense in the purchase of the machine, and its care later on. The upkeep and attention required by a tractor is negligible in contrast to that given to horses, but no one can expect a dirt clogged or unrolled machine to do good work. Come to this demonstration and see how easy the new farming is, how much better returns you will get from your crops, and you are sure to join the ranks of tractor boosters. While Americans realize that their

## The Redemption of Hard Soil

Written for California Cultivator by William M. Bristol

VER a major portion of Southern California during some period in the remote past there was spread a deposit of red soil varying in depth and texture. It is obvious that it was deposited by water, and there are reasons for believing that it was deposited under water, that is to say at the bottom of an ocean or lake. Earthquakes and erosion have wrought havoc with this continuous red plain, and only remnants of it now remain. Pretty good sized remnants, it is true, in the case of the Redlands and Riverside areas; but the bulk of it in the great east and west valley of Southern California has been either cut and swept away or covered by wash deposits occurring since the sea receded from the region.

The details of the process by which this extensive deposit of red soil was formed do not vitally concern the man who today is tilling it. It is not strange, however, that he should wonder why it is so hard in places; and why, even where it is known to be

would run across it and go all undiminished into the waste of the top soil was so hard that when it was cultivated at just the right moment it would break up into brick-like clods; and these when forming the down-hill side furrow, would permit the water to flow through between them and cause a break. Even with constant attention this piece was never irrigated without a score of breaks and portional annoyance.

In the course of time the furrow came into bearing, but the fruit about one-half normal size—came to be known at the packing house as "Bristol's little oranges." Plainly something had to be done—and was. In a word the whole refractory five acres was covered six inches with a loose, gravelly soil containing little or no clay. And, presto, it was a transformation.

In order to understand just what happened it is necessary to consider what occurs in the process of furrow irrigation. When water is run across

A Productive Tree

Orange or other long-lived trees call for careful handling of soil over a period of many years. If soil conditions are right the reward to the owner is great.

a hundred feet deep, there should be a stratum of it just below the surface so desperately compact as to require the designation of "hardpan."

I say that the wherefore of it is not important; but I must immediately add that the remedy for its resistance to water and to tillage is of vital concern to everyone who is seeking to take from it through the medium of agriculture the vast store of latent wealth that it contains—for analysis has proved that in all elements of fertility except nitrogen it is exceedingly rich.

I had, and still have, on my place on the East Highlands mesa, about five acres of this puzzling soil. At a depth of ten or 12 inches a stratum of hardpan is encountered, varying from a few inches to three feet in thickness. The soil on top of the hardpan is quite hard also; and, lying as it does on a round and sloping hillside, the conditions of the centuries have not favored an accumulation of humus or sediment, although the indigenous grass and brush protected it from erosion. Under the hardpan is a deposit of rather compact gravelly red soil of unknown depth, the three classes, top soil, hardpan and underlying soil, each showing about the same chemical contents.

Twenty years ago this piece, together with the rest of the place, was set to oranges. And then the nightmare began. It was almost impossible to get any water into the ground. A stream the size of a lead pencil

fine grained soil on any grade except a very light one—say one per cent—cuts and carries the soil; in other words it runs muddy. Every irrigator knows that muddy water will penetrate readily because the soil particles carried in solution clog the pores of the soil over which it flows. Even on a grade of one per cent—mine did not exceed that—if a stream in the furrow was a little large it would cut where a small stream would not. On gravelly soil the grade may be two or three per cent without cutting—and the water will run clear. It follows then that when I had covered my hard soil with the gravelly loam—and the plow, the way, has never been allowed to bring up the red and mix it with gravel—the water no more runs muddy; and, sinking in the gravel, it reaches the red in its clear condition. It penetrated that much more readily than when it ran across the red itself. Then, too, it spreads under the gravelly blanket so that only two furrows to the land are required and in many places it will during a hour run creep down through the tree row to the land below.

Well, the joke about the little oranges is forgotten at the packing house. From half a dozen standpoints the gravelly blanket is a good thing: absorption of water, retention of moisture, ease of cultivation, freedom from breaks in irrigating and some other things. Those who have seen the crops produced since the loose soil was put

that my nightmare was transformed to a pleasant dream. I do not know what it cost; the work was done many times when the ranch teams were not busy at anything else. The scheme did not originate with me. I have heard each of two men in a neighboring community who had tried it claim it as their invention. But then I heard a Los Angeles farmer 25 years ago proclaim himself the father of irrigation, in spite of the fact that in Genesis about the stream that came out to water the garden. Per Adam himself had a patch of soil too and covered it with sand. When his task with the hose and the hoe—who knows? But from whatever age or clime it hails the scheme is a good one. The cost is, whatever it was, has been reduced and the improvement, so long as one does not plow up the red soil and mix it with the gravel, will be permanent. There are hundreds and

thousands of acres of oranges elsewhere in California that would be benefited by the treatment—orchards that without it and an increase in their humus content promise to bankrupt their owners.

I have said that these hard soils are rich in the mineral elements of fertility, and that is equivalent to saying that for many years no fertilizer except a nitrogenous one need be applied. I believe cover crops and manure to be the best form in which to apply nitrogen to hard soils, and I further believe that the cover crops should be permitted to mature in order that their roots may make holes for the penetration of both water and air; and this belief is based on years of practice. One advantage that a hard soil has over a loose one lies in the fact that no fertility can be leached out of it into the underdrainage; it can only be depleted by sluicing it away from the surface, and

there is no excuse whatever for that.

I am reluctant to find fault with any of the work of Nature in Southern California, but the Old Nurse of Earth, while doing much for man in the

rather arid region, has left much for him to do for himself if the best results are to be attained. My five acre tract of hard soil I regarded as the worst on the place, but now I am wishing that the rest were like it.

## Cooperator For Quarter of a Century

J. DREHER is soon to retire from the active management of one of the most successful cooperative organizations in California. For 22 years Mr. Dreher has been manager of the San Antonio Fruit Exchange, with headquarters at Pomona, Los Angeles County. Prior to that he had been closely connected with the organization of the Southern California Fruit Exchange, being at the first meeting which was held in Los Angeles in 1893. When the San Antonio Exchange was first organized W. E. Collins was made man-

ager. His service continued only a couple of years, when the matter of a successor was discussed. The present editor of the Cultivator, at that time a member of the Pomona Fruit Exchange, opposed the selection of Mr. Dreher, but when he was finally elected was the first to move that the selection be unanimous and, we believe, none joined more heartily in the early days of the Exchange in the endeavor to make Mr. Dreher's administration a success and to make the citrus cooperative movement succeed in bringing to the growers fair returns for their labor. Our work of

# as the sled slides over snow

so the Yuba moves over the ground.

The steel ball race castings are the runners of the tractor. They slide over the freely rolling balls of the Ball Tread as the steel shod sled over snow.

The upward pull of the sprocket on the manganese chain furnishes the impetus for the Yuba.

The Yuba has a rigid track. Most other "track" machines lay a so-called "track" of flexible links and roll over it on flanged pulleys or wheels.

Such a track is no better than the ground on which it is laid—often it is more of a corduroy road than a track.

The rigid track of the Yuba does not kink nor cramp to minor irregularities of the ground. It follows the general contour smoothly and easily. The shock of meeting any obstruction is evenly distributed.

The Yuba slides over a ridge just as the sled takes a "Thank-ye-marm."

Like the sled the Yuba will coast of its own weight on a 3% grade!

commercial orange growing ended many years ago. Since then Mr. Dreher has continued his work at the head of the San Antonio Exchange.

It has grown from the 300 or 400 cars handled at that time by the entire exchange—in the meantime permitting many local associations to break away and form their own exchanges—until the year 1916-17, when nearly 2,000,000 boxes of fruit were shipped through the organization, returning \$4,000,000 in gold coin, or 50 per cent more than any preceding year.

After these years of strenuous la-

active business life for more than 50 years. In presenting to his directors request for relief from active work in the exchange Mr. Dreher says:

"The foundation for cooperative handling and selling of citrus fruits was laid twenty-five years ago when I took an active part as president of the Claremont California Fruit Growers Association, which was the parent organization of your Indian Hill Citrus Association. At that time the citrus industry was in the clutches of speculators—it was the pioneering of the small band of growers who composed that organization that enabled

"The San Antonio Fruit Exchange and its associations are the most advanced of the cooperative organizations on true principles of cooperation, granting strict and equitable justice to all and special privileges to none. These organizations inspire the enthusiasm, support and devotion of all who are privileged to be their members and to enjoy their benefits.

"In the past decade your increase of output and development in equipment has been marvelous. That you have at all times taken the lead in development and progress is evidenced by the many large packing, handling and precooling plants that have been erected by your various associations. You have the largest, most modern and most complete cooperative organization in the world and nowhere else is there such a spirit of cooperative work and progress. Standing in the very foreground of cooperative organizations you occupy a commanding position and I look with confidence to see you carry even farther forward the work so well begun."

#### CALIFORNIA STATE FAIR

Continued from Page 267

been partly taken over for Secretary Paine's office but a portion of the lower floor is given up to needle work exhibits, parlors, nursery and rest rooms. The second floor has been given over to fine arts. One collection of water colors of wild flowers of Cal-

not hold them and another is put up and filled before it's up.

This is just a starter. More week. The Cultivator is here in the prize winners.—C. B. M.

An advance word on livestock given by

W. S. Guilford

Never before in the history of the state and the nation has the livestock industry been of such great importance as now. It is necessary now that more animals be produced that these animals be of better quality. They must be able to convert grain and grass into animal product in the most profitable manner.

There are more accommodation for livestock this year—many additional barns have been built. And all full to overflowing.

The beef cattle show is the largest ever made in California. There are eleven herds of Shorthorns represented, all good ones. Herefords shown by four exhibitors—and there are some Angus.

There is a big show of dairy cattle, and while some exhibitors have been on hand for years and showing, their places are taken by newer breeders. Eleven breeders showing Holsteins; eight Jersey; four Guernseys; three Ayrshires and two Dutch Belts.

The sheep show is not large

P. J. Dreher

bor Mr. Dreher feels he is entitled to retirement and has announced that after November 1st he will no longer serve the orange and lemon producers of the Pomona section.

Mr. Dreher is a native of Germany. He came to the United States when a child, living in Illinois for some time, coming to California in '86. When he terminates his work with the organization he will have been in

the cooperative system of marketing and selling of citrus fruits direct to the trade to develop to the point where the growers assumed control of their own affairs and brought about the freedom of the industry. To the little association formed at Claremont 25 years ago belongs the honor of being the parent of the present exchange system of marketing.

"The foundation of your exchange and its associations was laid and has been maintained on a firm, solid, safe and equitable basis, and as a result they have withstood the tests of time and the full weight of the great business built thereon. During the past season you have marketed the largest crop of fruit ever produced in this district and you have obtained therefor the highest price per box ever realized with the single exception of the season of 1905-1906.

**THE AMERICAN**

Tractors and Farm Implements

The California Tractor and Implement Association has a great show, all under its own tent.

California is worth a trip to Sacramento to see.

Manufacturers building has the usual showing of household appliances. Many a valuable hour may be spent there by the home maker.

Machinery building is not yet filled. Irrigation pumps especially are short of former years. Spray outfits, electric lighting, drainage, irrigation appliances and many farm necessities and labor savers are shown.

Silos, feed cutters, dairy supplies—next week.

Farm implements and tractors have the southern addition to the grounds all to themselves. "How can one grow more for less?" There are many answers: One is, spend a day in the tent of the California Tractor and Implement Association. There are plows, disks, seeders, cultivators, harrows, harvesters, binders. There are tractors with one cylinder, two cylinders and four cylinders, with two wheels, three wheels and four wheels, big wheels, little wheels and no wheels. They all are labor savers and the buyer has some job to pick the best.

"Autos?"—one monster tent would

numbers but a lot of sheep of quality are on exhibit. The same is true of the horse show.

In no part of the grounds is there more interest than in the swine vision. With hogs nearing the cent mark producers want the best. Classes are well filled and competition is keen in Duroc-Jerseys, Poland Chinas, Berkshires, Hampshires, Chester Whites and Yorkshires.

"Charlie" Paine is a great man. He is a clever manager and stockmen of the state "swear by" him. He is ready and willing at all times to do everything in his power to advance the interests of the livestock business.

F. F. Stonerod

Livestock is ready for the close of the judges. In many respects this year's fair is remarkable. Entries are fewer than last year in several classes, notably dairy and swine. Considering the acute labor situation and the dairy farms of the state it is a wonder indeed that the breeders are so well represented. The total number of dairy cattle is about 75,000.

less than in 1916; swine are about 250 head short, but beef cattle are far ahead of any previous state fair both in number of animals and exhibitors. Sheep were somewhat of a surprise as early reports indicated a poor showing, but the exhibit is normal. Bishop Bros. and the Knollin Sheep Company

expects an increase in yield from 12½ to 20 tons per acre, but few are equally optimistic. The establishment of new canneries, the enlargement and improvement of old canneries, and a general increase in acreage all around will, no doubt, mean a corresponding increase in the tomato pack, unless la-

cases. There was not only a good acreage but also a good yield, and a larger quantity of peas were purchased outright over and above the contracted acreage than usual. The principal acreage was located in Alameda, San Mateo, Santa Clara and Stanislaus Counties near the canneries. There was also about two hundred acres grown across the Stanislaus County line in San Joaquin County.

#### Cucumbers

The cucumber crop in Central California is the best in several years. There is much less disease than usual and the vines are producing heavily. The crop came on late and much difficulty has been experienced in securing adequate and desirable labor for picking. On account of being short handed, growers have not been able to pick as fast as the cucumbers grow. This has resulted in the development of many large cucumbers which are not acceptable to the pickling works. The markets have been oversupplied with these large cucumbers and the vines have been somewhat weakened by the production of the large cucumbers. Many have gone to waste in the fields. Alameda County is one of

#### THE ONION SITUATION

The unprecedented increase in the acreage of onions in the San Joaquin delta whereby the area devoted to that crop jumped from 3700 acres in 1916 to 8300 acres in 1917, has caused a corresponding increase in the volume produced. The yield per acre has been equal to the average of former years averaging about 250 sacks of 100 pounds each per acre, and running as high as 400 sacks in some instances and in many cases exceeding 300 sacks. The size is not quite so good as usual and somewhat more smut is to be found, but on the whole the product is good. A decided shortage of Asiatic laborers, which are chiefly depended upon in this locality, together with a shortage of cars, a later maturity of the crop, and a poor demand have delayed the marketing of the crop. The great bulk of the crop is still in the fields and the movements to date do not begin to compare with the movements a year ago.—United States Bureau of Crop Estimates.

#### EXHIBITING POTATOES

Do not try to hide poor potatoes in the bottom because the judge will certainly dump out all the potatoes. See that they are all even sized and perfect. Uniformity is a big factor in an exhibit.

#### Kind of Potato to Grow and Exhibit

In selecting potatoes for exhibit keep in mind the following things:

Smooth, even potatoes, weighing 10 to 14 ounces, that will give the least possible waste in paring, are the most economical for the consumer to use and are consequently the best potatoes. Keep utility always in mind.

There should be no deep eyes, heavy eyebrows or warts.

There should be no tapered ends or rough spots.

There should be no signs of scab, rot, or any other disease.

Have all the potatoes in the exhibit as nearly alike as possible. Select one perfect potato as a model, and then pick all of the others as nearly like that one as you can.

Wheat is reported selling in Polk County, Oregon, at \$2.08.

Where the Big Horticultural Building Stood

The building burned in 1916 and has not been replaced but will be before another fair with the \$300,000 appropriated by the last legislature. The ground is now covered with tents and frame structures, not handsome, but housing some fine exhibits.

were unable to show, but several new breeders made up the deficiency.

Poland-Chinas, Durocs and Berkshires are strong this year, and if their numbers fall below those of last year the quality is better on the average. Yorkshires and Hampshires are out in full force.

#### A. Briggs

Bob Moore was so busy he would not stop to look at a Cultivator man. He was judging Bants. He said after I threatened him): "Greatest poultry show ever at California State fair!" "Anconas largest class with 1 entries; S. C. Rhode Island Reds 4 entries; Barred Rocks third with 0; pigeons, Bants and fancies, also rabbits, great in quality and numbers. A busy—good night!"

#### VEGETABLES CANNED

The assistant truck crop specialist for the Pacific Coast reports on crops grown for canneries in California as follows:

#### Tomatoes

There is still much difference of opinion as to the probable yield of tomatoes for canning this season, but interviews and field inspections made by the assistant truck crop specialist for the far west, have convinced him that prospects are bright for the largest pack of tomatoes yet put up in California. The pack of 1916 was the largest in the history of the state being estimated at 2,647,300 cases, yet the season was not favorable and the acreage was much less than it is this year. Much depends upon the length of the packing season, the date of killing frost, and the absence of heavy rains, but with a substantial increase in acreage, greater capacity of canneries, and no unusual amount of blight there is a good outlook. It is true that the season did not start favorably. Beetles cut down the plants in Central California, severe winds did much injury in the San Joaquin Valley, cool weather delayed growth, frost occurred in certain districts, and later intense heat blasted the first blossoms, but in spite of these difficulties, the stand in most fields where the heaviest plantings are located is very fair and the vines are fairly well set with tomatoes. Canners will start on tomatoes a week to ten days later than usual but with good ripening weather the yield per acre should be at least as good as last year, which was limited by an early frost and heavy rains necessitating a considerable loss by waste. One canner, after a careful investigation, states that he

bor difficulties or unforeseen disaster interferes.

#### Peas

The largest pack of canned peas on record for California was put up in

The Playground

Even the children are cared for in a nursery in the Women's building and the playground tent covered and filled with swings, teeters, slides, punching bags, etc.

1917. Up to this year, 1916 held a second place with approximately 227,000 cases. It is roughly estimated that the pack this year will be 275,000

the principal producers of cucumbers.

The Saticoy Bean Association is building a new warehouse.

## Building Material

Plumbing Supplies, Hardware, Paints, & Oils.  
FROM OUR BUILDING TO YOURS  
At Wholesale Prices. All Grades

### LUMBER

Thousands of satisfied builders can testify that we have saved them from ten to twenty per cent on their lumber bills. Bring us your estimate sheets,—it is easy to convince you that we always sell the "BEST FOR LESS."

### PAINTS

What do you think of the following paint bargains? Sherwin-Williams House paint \$2.50 per Gal. All colors but white. (Limited number of gallons to each person) Standard house paint \$2.25 a Gal. All colors including white. White lead 10¢ cents per pound. All varnishes 25 per cent off.

### PLUMBING

Oh! Yes! We admit it. Largest stock of plumbing goods at the lowest prices. We don't have to prove it. Prices speak for themselves. Laundry trays \$9 up. High tank toilet combinations (Complete) \$15.50. New recess lavatories with lift waste \$5.50.

### HARDWARE

Prices on building hardware? Well! C us last. Fine coal oil lantern 75 cents. "SPECIAL" Good sheet iron "Air Tight" Heaters \$2.00. Regular \$30 Wall Board \$28. Inside door locks 85 cents. Atkins Saws \$1.50 to \$2.50. Padlocks 20 cents to \$2.50.

## Attend the Fall Fairs

EVERY farmer should plan to  
attend his county fair and if  
possible, his state fair. He  
should not only attend per-  
sonally, but he should plan  
on taking his family with him, be-  
cause there is much of value to be  
learned at a good fair, small or large.  
We sometimes think that agricultural  
fairs are not appreciated as much as  
they should be. Many do not seem to  
realize that large sums of public mon-  
ey have been expended to make these  
institutions of value to the farmer in  
putting him in touch with the progress  
that is being made from year to year  
in his business.

The state fairs where big displays  
of grains, garden products, live stock,  
farm machinery and manufactured  
products are on exhibition are the uni-  
versities of the practical farmer—the  
clearing houses for new ideas. The  
man who stays at home, carries out  
his business day after day and year  
after year in the same old way, and  
doesn't come in touch with the men  
engaged in his own line of work who  
may be doing greater things is rob-

his needs. Gasoline engines, tractors,  
ensilage cutters, home lighting outfit  
and farm sewage plants may be stud-  
ied with much profit at the fairs  
where several makes of the same kind  
can be compared with each other and  
where experts can be consulted on  
practically every piece of machinery  
the farmer uses. Similarly, the best  
breeders in the country have their  
live stock on exhibition and are al-  
ways ready to discuss anything and  
everything pertaining to their busi-  
ness. From these experts much can  
be learned in regard to the safest  
methods of founding pure-bred herds  
or of how to manage registered cattle,  
hogs, sheep and horses to the best ad-  
vantage. The very fact that the fair  
affords the visitor an opportunity to  
get personally acquainted with the  
best breeders of live stock the coun-  
try over is worth many times the cost  
of attendance.

When you go to the fair, whether it  
be county or state, national or inter-  
national, go with an open mind; be  
prepared to ask questions and tell  
your children to do the same. When

Cultivating Cotton in Imperial Valley

bing himself of the great privilege of  
drawing inspirations from the activi-  
ties of others.

If we had never had horse races  
and speed contests, the American  
trotter wouldn't have been developed.  
Had there been no agricultural fairs  
where the great breeders of the coun-  
try could exhibit their live stock and  
have it judged to determine who had  
been the most successful, there would  
have been no great breeds of cattle,  
horses, sheep or swine.

If you are a breeder of hogs or of  
cattle and you wish to exhibit some  
of your stock, by all means, make  
your first attempts at a county fair.  
There the competition is not so se-  
vere and you will stand a better  
chance of winning a prize; besides,  
you will also have a better opportu-  
nity at the smaller fairs to learn how  
to exhibit your stock and other farm  
products. There is only one way to  
learn to exhibit live stock, grains or  
vegetables at a fair and that consists  
in going there and making some mis-  
takes. No one can fully tell you just  
how to show off your live stock to  
best advantage. You must make a  
beginning and learn by experience;  
that experience can best be obtained  
at a county fair. When you have been  
successful at your own or other coun-  
ty fairs you will be ready to graduate  
and make exhibitions at state fairs.

The man who is in the market for  
new machinery, especially such ma-  
chinery as is being improved from  
year to year, finds a splendid oppor-  
tunity at a well organized fair to  
study the various makes on the mar-  
ket and to find out for himself what  
kind of machine would best serve

you get there keep your eyes and ears  
open and don't be afraid to seek in-  
formation from those who are in po-  
sition to give it. Agriculture is a big  
business; no one man knows all about  
it. The most experienced can always  
learn something and those who at-  
tend fairs with that idea in view will  
get the most out of them. Support  
your county fair and your state fair in  
every way possible. They stand for  
progress and the betterment of agri-  
culture.—Farmer and Stockman.

### HOW TO HULL CORN

By Claudia Murphy

In grandmother's mother's house  
freshly hulled corn was a most pop-  
ular breakfast and supper dish, and it  
is now being prepared in many homes  
and meeting with a very generous  
welcome.

It is usually eaten in milk and is a  
most wholesome, economical and nu-  
tritious food, suitable for children and  
adults. The food value of hulled corn  
is: Water, 74.1 per cent, fat, .09 per  
cent, mineral matter, .5 per cent, pro-  
tein, 2.3 per cent, carbohydrates, 22.3  
per cent, calories, per pound, 490.

There is an undeniable tendency to  
revert to the delicious and wholesome  
foods of the last century and hulled  
corn is rapidly becoming most popu-  
lar. The hulled corn vender is reap-  
pearing on the streets and in the mar-  
kets of southern cities. Many women  
are finding in its preparation a gain-  
ful occupation, for they can easily sell  
it to their neighbors at a good profit.

### How to Prepare

Dissolve half a ten cent can of lye  
in a quart of water and dilute to three  
gallons with more water in a large

kettle. Put in four quarts of  
led corn and keep slightly below  
boiling temperature, until the  
s have started to break. Then  
into a large pan of cold water and  
with the hands thoroughly to  
en the hulls. Take off the hulls  
scum from the water and add  
h water several times during the

simmering. Stir well with wooden  
spoon. Change the water five or six  
times and wash and rub until the corn  
is white and clean. Keep it in cold  
water over night, then wash four of  
five times with hot water.

The California Ripe Olive Company  
at Oroville has begun its canning op-  
erations, working first on tomatoes.

## Electric Blasting Machine for Firing Stump Charges

Written for California Cultivator By J. R. Mattern

BETTER way than the time  
honored cap and fuse method  
of setting off the charge of  
powder in removing stumps  
is to detonate (or fire, as it  
is expressed) the charges with  
electric blasting machine. Such a  
ine is just a small affair, say ten  
as high and six or eight inches  
re, and it consists mainly of a  
machine something like a mag-  
on a gasoline engine or an auto-  
le, operated by a handle you pull  
nd push down. There are many  
em on the market. They may be  
ht from almost any big hardware

one big thing about the electric  
ing machine is that with it you  
fire several charges instantane-  
e. This is of great advantage in  
case where the thing you want  
ast extends more than 12 or 15  
in any direction from the  
ge. In removing big stumps with  
charge placed deep under the  
r, there is a big waste of powder  
of force in moving all the earth  
is loosened and thrown out. The  
way is to put a smaller amount  
ce, just enough to lift the root  
under each of the main roots at  
t the point where it joins the

stump body, or even farther out where  
it is anchored tightest by the ground.  
This will require several charges, say  
three or four. If they are detonated  
at the same time the result will be  
to lift the stump right out of the  
ground without tearing up the earth  
much, and most of the loosened dirt  
will fall back into the small cavities.  
If there is a tap-root you should place  
one charge right against it or two  
charges, one on each side if it is very  
big, and it will break off instead of  
pulling when blasted. Be sure to  
place the charges at a sufficient depth  
so that the remaining root will be  
below the plow line.

If you think the stump will not be  
split up enough for easy handling and  
burning by these small charges, place  
another one right under the center,  
against the wood. It will not require  
much powder in a charge so placed  
to break up almost any stump.

The advantage of the electric blast-  
ing machine will be plain to anyone  
for removing stumps that are hollow.  
It is almost impossible to blow these  
out satisfactorily with one charge.  
When cap and fuse is relied on sev-  
eral charges must be fired, one after  
the other, under the different roots,  
with a great waste of energy.

## Protect Snake and Owl

OPHER snakes and barn  
owls are staunch friends of  
the farmer. Protect them  
and they will repay the kind-  
ness by defending orchard  
garden against the costly ravages  
e gopher.

ch is the championship of the  
er snake and the barn owl given  
e University of California in a  
tin on "The Control of the Pocket  
er in California."

e gopher does more damage in  
ornia than any other animal, not  
oting the ground squirrel or the  
e. People should not make the  
ake of killing the mole which is  
lpful creature living on worms,  
s, and insects. But the gopher  
er deserves a sentence of death.  
other gopher may rear anywhere  
three to a dozen children in a  
and often two families in a year.  
breeding season begins when the  
ria and the malva, the gopher's  
ite foods, furnish an abundant  
supply after the first fall rains.  
best time to trap and poison  
ers is soon after the green vege-  
l starts in early winter or spring.  
destruction of a female then  
a, perhaps a dozen less gophers  
season.

poisoning gophers, the bulletin  
amends a bait mixed in the fol-  
g proportions: to eight quarts of  
ed sweet potatoes, parsnips, or  
ts, add a half pint of flour paste,  
arter of an ounce of powdered  
anine alkaloid, and a sixteenth of  
nce of saccharine — to conceal

the bitterness of the strychnine. This  
poisoned bait should be in pieces  
large enough so that the gopher must  
eat it at once, instead of putting it in  
his fur-lined cheek-pockets to carry  
to his storehouse, where the poison  
would soon lose its strength. The  
poisoned bait should be placed in the  
main runway.

Traps, also, should be placed in the  
main runway, and not in the lateral  
which leads to the surface. To pro-  
tect himself against his natural  
enemy, the gopher snake—nature's  
own gopher trap—the gopher closes  
the lateral with earth and so is likely  
to throw out poisoned bait placed in  
the lateral or to spring a trap placed  
in a lateral by pressure of the earth  
which he pushes ahead of him in  
blocking the open hole. After putting  
poison or traps in a runway the tops  
of the gopher mounds should be kick-  
ed off so that newly-made mounds will  
show next day where the gophers  
have not been destroyed.

Carbon bisulphide may be used to  
destroy gophers, but caution is need-  
ed, since it is inflammable and explo-  
sive.

To flood alfalfa fields from irrigat-  
ing ditches is a good way to fight  
gophers, but the farmer and his dog  
must stand ready to attack any  
gophers which seek to escape from  
the deluge.

Barn owls are efficient enemies of  
the gopher. A pair of nesting barn  
owls will catch from three to six  
gophers a day for their brood.

While the gopher snake or bull  
snake may steal eggs occasionally, his  
main diet is small rodents, chiefly  
gophers.

# PLANT Germain's HAIRY PERUVIAN ALFALFA

Germain's Hairy Peruvian Al-  
falfa was thoroughly tested out all  
over the state, and the entire South-  
west, last year—and it HAS MADE  
GOOD.

It is the HEAVIEST PRODUC-  
ER known—and it is bound to dis-  
place all other varieties. It grows  
vigorously in all climates—does well  
at 5000 feet or at sea level.

Germain's Hairy Peruvian Al-  
falfa produces a great mass of leaves  
from the top to the crown of the  
plant, and as the leaves contain the  
greatest amount of food value, this  
type of alfalfa gives the farmer the  
greatest yield.

To insure perfect results buy  
ONLY Germain's PROVEN SEED.

**Saturday, Sept. 15, 1917****OUR ADVERTISERS RELIABLE**

We guarantee our subscribers against loss through dishonesty of any advertiser in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

**THIS WEEK'S COVER**

On the third page of this issue may be seen what is said to be a common sight in eastern France, one of the land dreadnaughts which is proving an important agent in the work of the Allies. On the cover page is a still more striking picture and even more important in the winning of the war—California dreadnaughts. They are plowing the land deeply; they are plowing the land swiftly, and 90,000 acres of wheat where there was no wheat before, have been made possible by their aid. California is a great factor in the feeding of the world, more than many of our people realize.

This scene is one which is appearing in the movies in all sections of California. It was taken in Sacramento County and the photo from which the engraving was made is used by courtesy of the Sacramento chamber of commerce. Secretary Maddox of the chamber writes:

"This is a squadron of seven combined harvesters threshing in a 22,000 acre field of grain in Sacramento County. These threshers are drawn by 200 horse power tractors and cut a total swath of 238 feet as they move along, and the whole outfit harvests, threshes and transports to the warehouse nearly 300 tons of grain daily. The crop of the 22,000 acres is valued at nearly \$1,000,000. The threshing outfit is said to be the largest ever assembled."

**CHILD LABOR LAW**

The new federal child labor law has been in effect since September 1. It requires that no child under 14 may be employed in any factory, mill, workshop, or cannery in the United States whose products are to be ship-

ped in interstate commerce, and no child under 16 in any mine or quarry. The working day of children 14 and 15 years of age in factories may not be longer than eight hours and they may not be employed between 7 p. m. and 6 a. m.

**LAND SETTLEMENT**

A letter from Dr. Elwood Mead informs us that the land settlement board has organized with Dr. Mead as chairman and D. N. Morgan as secretary. Headquarters of the board will be at the University of California at Berkeley. A meeting was held in the capitol at Sacramento last Tuesday and an outline of work mapped out. Information will be given in the Cultivator later as to this work which means so much to the future welfare of our state.

**SOMEWHERE IN FRANCE**

"Somewhere in France" on the third page of this issue shows a land dreadnaught of a different type from that shown on the cover page. California prefers the constructive rather than the destructive type. If needed California factories could doubtless manufacture these fighting machines in great numbers. As to whether they will do it or are doing it we don't know. This illustration is from the London Illustrated News and is used in this tractor issue as showing the versatility of this modern farm appliance and it's proof that modern war is machine made.

**FEED THE STARVING**

We have from the Belgian minister of state appeal to the people of the United States and Great Britain for aid in feeding the broken down Belgian people in Holland and wives of war prisoners, in supplying comforts for Belgian soldiers in the trenches and others who are suffering because of present war conditions. Many have the idea that since America declared war the United States government is relieving the destitution of the Belgians. This is true as to Belgians in Belgium, but not in all sections. Hence the appeal. Any who wish may write Workman's Belgian Fund, 32 Grosvenor Place, S. W. 1, London, England.

**TRACTOR DEMONSTRATION**

A wonderful degree of enterprise is shown by Pacific Coast tractor and implement manufacturers and distributors in answering the appeal of our country for greater production. None have done more than our tractor and implement people. They have labored under all kinds of difficulties. The labor situation is serious; it is impossible to get steel or crude materials in anything like the quantity required. The food commission has been appealed to to secure through the war board release of some steel to manufacturers of farm machinery and implements. No decision has yet been reached, but food is necessary and to make food cultivated lands are required and cultivated lands require farm implements and farm power.

**LAST WEEK**

Did our readers notice that last week's Cultivator felt somewhat more bulky than ordinary? It was a great issue in amount of matter it contained, in number of copies printed, and in calling attention to a great state fair.

In printing that issue over five and three-quarters tons of white paper

was required—to be exact 11,520 pounds. When placed in the mail sacks the bulk of the papers was so increased that four drays were required to take it to the post office.

Beside calling attention to the state fair some idea was given of the growing magnitude of the livestock industry. Then there were advertisements of tractors and silos, fire arms and all kinds of farm implements and machinery, nursery stock and seeds, poultry and poultry supplies, sprayers, gas engines, farming lands, fertilizers, rodent exterminators, even a hotel for sale, tractor demonstrations, microscopes for seeing things large in California, and many other things the farmer needs. Also we may be permitted to add that there was some good reading matter on various cultural practices, history of the state fair, farm loans, cover crops, apple packing, prune dippers, silos and all kinds of livestock information, a couple of dozen illustrations, besides dozens of others in the advertising matter. Notice that we have given the advertising matter precedence here; it is intensely interesting.

**FERTILIZE**

Now is the time to consider next year's crop production limitations and overcome them so far as possible. California soil is rich and this supposed richness has been permitted to prevent the fullest production. When the writer came to California it was a common sight to see sandy stretches of highway paved with stable manure; but few producers were hardy enough to "poison" their lands by hauling out stable manure, and so it was a perplexing problem what to do with the stuff.

This seems so improbable that modern day farmers assert such a condition was not possible in any farming section. It was a fact, nevertheless, and many a farmer flatly refused to have stable manure spread on his place.

In explanation we may say that in the earlier days of grain farming the sandy lands were given liberal applications of stable manure of a more or less coarse, strawy nature. This was plowed under, the ground was sandy, and a year with only a moderate rainfall following was almost certain to "poison the crop," this merely because of the drying out of the soil caused by the coarse manure plowed under. But that condition seldom will obtain.

Today the handling of manure is better understood; the application of commercial fertilizer is better understood. It is also well known that prices have advanced during the past two years, and this may discourage some producers from even considering the securing of fertilizers for next year's crops, but with the longer prices to be secured from all food crops, one can well afford to pay even present day fertilizer prices.

But how to secure the goods, even with money in hand—there's the rub. Hence this early hint. Secure fertilizers early; supply, transportation, and other factors all demand it.

**SHOW THE COLORS**

We have seen a new definition of a pessimist. It is: "One who figures out how much additional gasoline it takes to carry a small flag on his auto." Fortunately there are not many pessimists of that kind in California for the colors are shown on almost every machine. While we believe there is more patriotism in raising a few extra beans than in flying flags, yet we fail to see the necessity for comparing the two manifestations of patriotism, but we do think that some of the flags which have been flying for weeks should be freshened up a bit.

**Agricultural News Notes**

Denmark has prohibited export of all fish, fresh, dried, salted or smoked.

Hawaiian sugar companies report that most of the sugar crop has been shipped.

Western New York is ready to a 9000 car apple crop—if labor can be secured to handle it.

The New York State Fruit Growers' Association opposes the passage of a food control bill by the state.

Europe has learned to eat peas and beans since the outbreak of the war, large importations have been made from the United States, India and Egypt.

In company with beans elsewhere soya beans raised in Manchuria have gone up in price. Heavy speculation with short stocks are responsible for drought and floods have damaged plantings.

Another lesson of the war learned by France is the value of cold storage. Since the war broke out a number of cold storage plants have been established in France by the British army and the French people are beginning to realize their necessity.

Sugar planters of Hawaii have been turning their clocks ahead anywhere from 15 minutes to an hour to working hours of the summer. Now a concerted movement has started to standardize the day saving scheme by turning all clocks back the same number of minutes.

Citrus fruit cars, not needed a year in California because of a small crop are wanted by North American apple growers to move their fruit East. The Fruit Growers' Association has had representatives in Washington, D. C., for some days working this problem with the authorities.

According to the food bill which came a law this month, "it is hereby made unlawful for any person willfully to destroy any necessities for the purpose of enhancing the price or restricting the supply thereof; knowingly to commit waste or willfully permit preventable deterioration of any necessities in or in connection with their production, manufacture or distribution; \* \* \*"

A new exporter of beans is the state of Sao Paulo in Brazil, which this year will ship nearly 200,000 pounds. The Brazilian brown bean and a white "navy" bean are the principal varieties raised. Two crops are harvested during the year, the first in December and January; the second in May and June. The December-January crop is inferior to the May-June crop.

Tractors as an agricultural necessity are beginning to take their place in many countries. The first tractor motor plows was made in Switzerland in March of this year on sugar lands. The plows were of American manufacture and made a very favorable impression. Twenty-nine American tractors were imported to Spanish agricultural districts in the first five months of 1917.

The Canadian Northern Railway has passed to government ownership. It has 9500 miles of railway with 10 grain elevators at Port Arthur and steamships on the Great Lakes. In addition the finance minister stated that the Dominion government will make a loan to the Grand Trunk Pacific Railway Company of \$7,500,000 and it was intimated that at some future time action may be taken looking toward the nationalization of the road.

# Agricultural News Notes of the Pacific Coast

## Northern California

The Gridley cannery is now running on tomatoes.

Anthrax is proving serious in the herds of Yolo County.

Bartletts have been selling in the Eastern markets around \$3.00.

Jap rice in Butte County has proved a remarkable crop this year.

Colusa County has 25 per cent more and planted to beans this year than last.

Sacramento Valley harvesting operations are larger this year than ever before.

Hogs have reached the 15 cent mark in San Francisco packing houses.

A new olive processing plant is to be erected at Fair Oaks, Sacramento County.

Anderson, Shasta County, is appealing for 100 pickers to aid in the prune harvest.

Davis, Yolo County, hopes to have established in that section a milk condensary.

Deputy State Veterinarian Guldager is inspecting dairy cattle in Sonoma County.

Hop pickers in some sections have been raised from \$1.00 to \$1.75 per hundred pounds.

Glenn County's preparation for a great fair at Orland, September 26-29, is practically perfected.

There are about 2000 acres of broom corn in Sutter and Colusa Counties. The crop will be very short.

The Humboldt County fair held at Ferndale was given an attendance this year far in excess of any former year.

J. P. Dargitz, one of the appraisers of the farm loan bank at Berkeley, has been appraising lands of Sutter County.

Appeals by canners and others have caused delay in opening schools because of the labor situation in Alameda County.

The Durham, Butte County, Almond Growers' Association held its annual meeting August 27. The crop will be exceptionally short this year.

A meeting with representatives from many cooperative organizations of the state was recently held in San Francisco and a vote declaring for a state federation was passed.

Governor Stephens has called a meeting for Monday, Tuesday and Wednesday at the state house in Sacramento to discuss the question of greater production in California during 1918.

Grape dryers of Sutter County are busy. The crop is running exceedingly light, the Sutter County Farmer reporting only about 40 per cent of average. Grapes for drying are selling at about \$30 per ton.

At the annual meeting of the Sonoma County Fanciers and Breeders Club at Santa Rosa George A. Beshaw was elected president and D. Harkness Currier, secretary. The dates of the next show are December 12-15.

President Stephens of the Pacific Rice Growers' Association predicts that the coming year's crop of rice grown in the Sacramento and San Joaquin Valleys will be worth \$12,000,000. Butte County has the largest acreage planted, 21,000 acres.

## Central California

The picking of Muscats has begun.

There is prospect of a casein plant being established at Dos Palos.

Tulare County canneries are putting up a heavy pack of tomatoes.

Santa Cruz County produces 51 per cent of the apple crop of the state.

The Prune and Apricot Growers' expects to handle a 200,000,000 pound crop.

One Visalia rancher has sold over \$450 worth of tomatoes from a half acre.

The cannery at Selma, Fresno County, is paying out \$2000 daily for labor.

There was never such a general campaign against ground squirrels as this year.

Kern, Tulare, Fresno and Kings Counties will join in a squirrel poisoning campaign.

It is estimated that the bean crop of the Delta region around Stockton occupies 50,000 acres.

Ripon, San Joaquin County, is one of the busiest places in the state handling table grapes.

Turlock will make an exceptionally large exhibit at the Stanislaus County fair, September 17-22.

Owing to shortage of labor the peach drying season is being carried over into raisin season.

The Kern County grape crop this year will aggregate 1000 tons as against 885 tons in 1916.

California Malagas and Muscats in drums are proving popular and liberal orders are being received.

The Southern Pacific has put on two beet runs, one from Kings City and the other from Watsonville Junction.

County Horticultural Commissioner Howard of Kings County announces that he is ready to test grapes for their sugar content.

The bean crop of Northern San Joaquin County is valued at close up to \$2,000,000. There are over 85,000 acres planted to beans.

The first 11 cars of Malaga grapes shipped from Modesto returned 25,090. Most of the sales were made in Chicago and New York.

A vigilance committee has been formed in Tulare County. It is proposed to stop the setting of fires and destruction of property.

The Oakdale Irrigation District will hold a special election at an early date to consider vote on raising \$60,000 with which to concrete the canals.

The California Peach Growers estimate that they will be able to handle 35,000 tons. A larger quantity of fruit has been handled green this year than formerly.

Sugar beet harvesting in the section west of Turlock is yielding exceptionally well. There are 4000 acres of beets which will be shipped to the Spreckels sugar factory.

Sawdust delivered for packing Emperor grapes has contained so much moisture this year that most of it has to be rejected, some running more than one-fourth moisture.

A vineyardist of Reedley, Fresno County, has sold \$600 worth of Thompson Seedless grapes, from five acres and estimates he will have \$500 worth of raisins from the same ground.

## Southern California

Practically all peach drying yards are now running full handed.

Lompoc Valley, Santa Barbara County, is harvesting beans.

Milch goats will be a feature at the Riverside county fair, October 9-13.

California is shipping about 1000 carloads of deciduous fruits monthly.

The walnut harvest has begun in the Mound district of Ventura County.

Riverside's shipments of oranges to date are 37,114 cars, of lemons 429 cars.

Limas are being cut in Camarillo and Conejo sections of Ventura County.

The Banning cannery handled 1000 tons of apricots. It is now busy on peaches.

Escondido celebrated Admission Day with her tenth annual Grape Festival.

Improvements and additions are being made to the olive packing house at Riverside.

A Ventura County potato grower has invented a new evaporating process for potatoes.

Pomona, Los Angeles County, shipped nearly 2,000,000 boxes of oranges during the past year.

Imperial County is hoping for a delay in fall frosts until the immense cotton crop now maturing fully ripens.

Several hundred acres of sugar beets are being grown in the section near Victorville, San Bernardino County.

Many orchards will be planted the coming season in the neighborhood of Paso Robles. Many grain lands will become orchards.

The directors of the California Lima Bean Growers' Association have decided not to set any date for entering the market and not to deal in futures.

Creameries are finding it necessary to materially increase prices to producers if they are to secure sufficient milk for keeping their plants open.

"Some beans" is what the sections around Covina and Puente are remarking when they figure up between 700,000 and a 1,000,000 as the season's returns.

Notwithstanding feed shortage in Imperial Valley they were still able to take outside feeders, and 20 cars were recently received from San Joaquin Valley.

It is now thought that relief will be given to ranchers in the Malibu Ranch, Los Angeles County, by securing for them an outlet through a good road to market.

The Carpinteria Valley of Santa Barbara County is busy harvesting its beans and walnuts. Remembering the damage from early rains last fall bean growers are rushing their beans under cover.

M. F. Baumeier has been appointed farm adviser of San Bernardino County. Mr. Baumeier is a graduate of the Colorado agricultural college and has recently been doing farm adviser work in Australia.

Returns from cantaloupes of the Imperial Valley were materially cut because of lateness of the season, increased labor cost, car shortage and a number of other factors. This will give cotton farmers who are offering long rentals for next year an advantage over cantaloupe people.

## The Coast

Latah County, Idaho, has started a road building campaign.

Washington farmers are holding their alfalfa for \$20 a ton.

Farmers of Las Animas, Colorado, have built a cooperative alfalfa mill.

Okanogan County, Washington, will spend \$100,000 on its highways this season.

The Northwestern section of Washington will produce 400 carloads of apples this fall.

The Skagit County Association of Milk Producers will build a \$200,000 milk condensary.

Settlers of the Talent irrigation district in Oregon have voted \$600,000 bonds for improvements.

The Interstate Fair at Spokane last week opened its doors on the first day to a crowd of 15,500 people.

The Spokane Interstate Fair was held last week. More than 1000 head of live stock were exhibited.

There is reported to be an abundance of pickers in the hop fields of the Willamette Valley this season.

The Maricopa County, Arizona, Poultry Association met in Phoenix September 8 to plan for winter shows.

The Cochise-Graham Cattle Growers' Association held its semi-annual convention at Douglas on September 3.

Polk County, Oregon, reports a wheat crop of from 20 to 30 bushels to the acre, beans and potatoes only half a crop.

Farmers of Mesilla Valley, New Mexico, have subscribed a fund of \$10,000 to drain their lands from seepage from irrigation canals.

President Johnson of the Chandler, Arizona, Cotton Growers' Association announces that there are plenty of pickers to handle the cotton crop.

The government has just awarded the contract for 3,000,000 pounds of potatoes to a Seattle firm for the use of the American Lake cantonment.

Members of the Mescalero Indian tribe near Tularosa, New Mexico, bought \$4600 worth of liberty bonds. The widow of Geronimo bought a \$100 bond.

Many of the farmers of Klickitat County, Washington, are installing grain elevators of 5000 bushels capacity with lifts operated by gasoline engines.

Japanese farmers in the Mesilla Valley of New Mexico have been receiving \$50 a ton for cabbage and report a profit of \$800 per acre, less their labor.

The University of Arizona is compiling a directory of poultry breeders in the state. All names should be sent to C. R. Adamson, University of Arizona, Tucson.

Serious fires have occurred throughout all sections of the Northwest. In Montana and Northern Idaho 2000 men are fighting fires under direction of forest rangers.

The first carload of cantaloupes shipped from the Salt River Valley of Arizona this season brought \$40 a ton F. O. B. They were sold in Gallup, New Mexico.

A farm bureau has been organized in Dona Ana County, New Mexico. The Mesilla Valley is the largest agricultural territory in the county. It receives its water from the great Elephant Butte dam.

## The Iris

Written for California Cultivator By Mrs. J. Dean

**T**HE iris is becoming more popular every year. The formation is most interesting, the fragrance of most varieties delightful and the soft restful colors of so many are a delight to the eye, or is it the soul, for as one writer in describing the natural beauties of a certain location remarked; "There are those who see all this wonderful display from year to year and yet it has no apparent attraction to them. Clearly it is not the eye but the soul that sees."

Probably no one who has attempted to interest the public in the iris in a commercial way but has often met with a rebuff in one way or another. "Flags are so common — they grow wild back East where I lived." Offer some large gorgeous flower and it will appeal to those people. We have often thought when we have heard someone speak almost disdainfully of "flags," that the common name should have an added charm, and we were delighted recently when reading the description of the blue flag by that student and lover of nature, Gene Stratton Porter. After describing the wonderful formation of the flower, she says: "Nature is very frank, and these marvels are spread closely over her face for any one who cares to learn. I think those who understand and really appreciate these delicate processes among the flowers never again doubt that there is a Supreme Being. The Creator said, 'And a bow shall be set in the cloud; and I will look upon it, that I may remember the everlasting covenant between God and every living creature of all flesh that is upon the earth.' So he evolved the rainbow. On the painted lily faces the botanists of early Greece saw reproduced these wonderful colors, and so they named the plant 'iris,' the rainbow."

"Because the sky is blue, eternal and never changing, men have adopted this color to express friendship, which also should be eternal and never changing. True blue is dear to all hearts and conveys an express meaning; so again these wonderful flowers are baptized with truth. And as if no honor might be lacking, to the blue is added 'flag.' Never was other flower more highly honored in its naming. Sometimes beautiful plants and vines are insulted by scientists applying to them careless, contradictory, and incongruous terms. Here is one embarrassed by riches both in its scientific and common name. Think what his flag symbolizes to a man! It means so much that for it he severs the dearest ties of earth, leaves a home of comfort and faces untold hardships, exposes his body to sickness, wounds, and many forms of death. For it he sacrifices everything else on earth, yielding with smiling lips life itself."

"So when the slender, exquisite leaves of the iris waved on the free winds of the marsh with the abandon and grace of the flag, some one caught the resemblance, and to the symbol of eternal truth was added that of liberty, and the rainbow lily became the blue flag, the true flag."

The West does not seem to be keeping pace with the East in the cultivation of the iris, and it seems the more strange when we consider that our climatic conditions are much better suited to their requirements, particularly the fine large Asia Minor and

Eastern species and their hybrids. It is doubtful if there is another location where they grow to greater perfection, producing fine large rhizomes with no root rot trouble; no drenching rain to ruin the blossoms; and an unusually long blooming period. Some varieties too bloom more than once; most of the true Germanicas make three crops of bloom; in early spring and late spring or early summer and again in the fall or early winter. By proper selection we can have irises a greater part of the year.

One of the most valuable for Southern California, as well as for locations that are not so mild, is the Unguicularis group, more commonly known as *I. stylosa*. They are natives principally of Algeria and Greece, are delicately beautiful and possess perhaps the most delightful fragrance of the whole genus. They have a pretty grassy evergreen foliage, two feet in length in some varieties, shorter in others, and a well developed clump will occupy a space some two to three feet in diameter. This iris can scarcely wait for the cool weather, and we occasionally see blossoms in the summer, but usually by September it can wait no longer if watered and then flowers at more frequent intervals until in December-January it is at its height, and a large clump will be a mass of bloom nestling among the foliage. The stem is very short, but the perianth tube is very long, six in-

ches and sometimes even 12 inches in length, so that answers for a stem. In gathering it is best to gather just before the flower opens, grasping the tube firmly and pulling gently so as not to pull up the immature buds which will develop later. They come in various shades of lilac, purple and white, and have a central band of orange or yellow. The markings of some are much finer than others. Both plant and flower resemble somewhat many of our native Californian irises although the flowers average somewhat larger in most varieties. After January they gradually decrease until March or a little later. Some varieties, *speciosa* for instance, do not come into bloom so early and consequently bloom later. It does not seem possible that anyone who cares for flowers would not like this iris, and the fact that it blooms in mid-winter when flowers are scarce, makes it so much more valuable. It is a fitting companion to the violets, and the two combine very nicely for table decorations.

Again in our climate some of the Asia Minor irises of the Germanica type come into bloom in March, others in April and May, and it is the last of June before they are all gone.

During July and August we do not expect to see many irises as that is their natural resting time. In the fall and early winter however quite a number bloom.

We have referred only to the large flowered Germanica type as these are the most popular perhaps of the genus, and the pretty *stylosa* which because of its blooming habit is doubly valuable.

## Questions and Answers

ANSWERS BY EDITOR AND STAFF

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

### Red Ants and Poultry

Regarding query as to poisoning of poultry by eating beef heart covered with red ants, M. H. Mendleson of Piru writes:

"If these were the common red ants of medium size they have a sting which causes severe prolonged pains. I'd rather be stung by a hundred bees than by one of these red ants. I generally stand a great amount of bee stings with no bad effects, but a red ant sting causes the most severe and prolonged pains that I have ever experienced from insects, making me almost sick. In fact I was affected nearly a whole day by one sting. It might have been the internal ant stings which killed the poultry, for it would be more severe on poultry than on man."

### Poisoned Rabbits for Feed

Would it be safe to feed jack rabbits that have been poisoned with strychnine to chickens, dogs and hogs? I thought I would soak them in strong salt water to draw the blood out and cook them. We put a little strychnine on apples and carrots on the rabbits' trails. Have been burying the rabbits for fertilizer but would like to use for feed if safe. The cat eats them with no bad effects.—Subscriber, Nipomo.

We know that cats which have eaten poisoned gophers and birds have died from the effects but in this case since the poison is taken into the stomach of the jack rabbit and this is removed and the flesh cooked we think there would be no danger. However, we have had no experience and

would ask subscribers of the Cultivator to write of theirs. Meantime our only suggestion would be to try it on an animal of little value.

### Commercial Fertilizer for Potatoes

Would like to know how and when to apply commercial fertilizer to potatoes. My soil is a silt about four feet deep.—Subscriber, Santa Ana.

Any good commercial fertilizer which is rich in potash is satisfactory for potatoes. As a rule it is applied in the fall at time of planting.

### Grafting Peach Trees

Have several thrifty peach trees which are not of a variety suited to this locality. Would it be advisable to graft them over and when is the best time?—Subscriber, Long Beach.

It is very difficult to satisfactorily graft stone fruit trees. It is possible to graft them, however, either to peach, almond or apricot. If it is desired to make the attempt the operation should be performed in winter when the trees are dormant and just before or at the time of beginning of the spring growth. We would prefer to grub out these trees however, and reset with thrifty nursery trees.

### Wild Oat Seed

Is it possible to secure the seed of wild oats?—Subscriber, Winters.

We do not think that wild oat seed is carried by the seed houses.

### Roots of Trees

My yard is full of roots, a specimen of which I am enclosing. The soil is adobe and whenever a plant is irrigated these roots reach up and sap the soil. Are they from sugar gums outside the fence or are they wild morning glory? What would be the best way to get rid of them?—Subscriber, Olay.

The roots sent are not those of the young glory and if sugar gums are thin 100 feet of the ground in question presumably these roots are seeking for the limited amount of water which is available. They may be controlled in part at least by trenching at the trees in such a way as to cut roots running into the garden.

#### Pit of Peaches

Send a peach pit from a tree on which nearly all of the peaches are rotten at the pit. The fruit seems perfect on the outside with the exception of the stem end, which is open. What can be done to prevent this trouble another year? — Subscriber, W.

This trouble is very common, some are much worse than others, and is very perplexing for there is no satisfactory remedy. As the university experiment station terms it, it is a "physiological phenomenon" and not a disease. Some orchardists have claimed that it may be caused by lack of irrigation followed by excessive irrigation, or by other unsatisfactory conditions.

#### Keeping Beans

Please advise best way to keep dried beans through the winter. — Subscriber, Covina.

Now free from weevil store in any way free from that pest. If in large quantities they may be closed tightly and of the pest by using carbon bisulphide, five pounds to 1000 cubic feet space. This may be used after the beans are in place and any weevil in them reached by this method. If one has but a small quantity, glass fruit jars, crocks or jars, barrels or other airtight receptacles may be used.

#### Sorghum

Would like to learn how sorghum molasses is made. — Subscriber, Galt. The University of California has issued information on this subject. In short, the process consists of crushing the "juice" from the plant between large iron rollers, then evaporating—the same as in the making of maple syrup—in ordinary cauldrons the more modern evaporating pan. The molasses reaches the proper consistency almost constant skimming necessary.

#### Winter Hog Feed

Would you advise best crop to sow for the coming month for winter feed for hogs on land which can be irrigated? Have been considering turnips or carrots but do not know which makes best feed, nor best variety of either. — Subscriber, Santa Clara.

Changel wurzels, sugar beets, carrots or kale. The seedsman from whom the seed is purchased will inform you as to best varieties for the different seasons.

#### Drying Prunes

What is the best way to dry prunes for preparing them for market? — Subscriber, Glendora.

Soak in lye solution for a minute or a fraction of a minute, according to the hardness of the prune. If the prunes are fully ripe or partially dried and the water is not boiling some use as strong a solution as one pound lye to five gallons of water. When care is taken to keep the water at boiling it may be used as weak as one pound to five gallons. Rinse in clear water and spread on trays. When nearly dry turn over trays so that they will not be in direct sunlight.

#### Seasoning Lumber

Have a large camphor tree which I would like to make into a chest. Can you give me information regarding the method of curing or seasoning same

to prevent checking? — Subscriber, Anaheim.

The only suggestion we can offer is to stack where heat or sun is not too great. Lay strips across the ends of the boards in the pile. If cured in the open sun checking and warping is more serious.

#### Shavings for Scratch Litter

Could you tell me if there would be any harm in using shavings such as you get from the lumber mills as litter to put scratch feed in for chickens? Straw is rather expensive and shavings very cheap. I have tried using them about two inches deep and it seems to work all right but would like your opinion. — Subscriber.

We can see no reason why shavings should not be entirely satisfactory.

#### Pruning Peaches and Plums

Should peach and plum trees be pruned in summer or winter? I have some late Crawford's that do not bear well. — Subscriber, Inglewood.

As a rule summer pruning of stone fruits is not practiced. Winter pruning will induce young growth which the second year after will usually bring a good crop.

#### Capacity of Tank

Kindly inform me through your paper of the capacity in cubic feet of a tank to hold 1,000,000 gallons of water. — Subscriber, Los Angeles.

There are approximately 7.5 gallons in one cubic foot. Dividing 1,000,000 gallons by 7.5 gallons gives 133,333, number cubic feet capacity required.

#### DO YOU KNOW THIS MAN?

The farmer gazed with heavy frown Upon his mower broken down; Then hastened to the nearest town To buy repair.

He told his dealer of his woe, And how much grass he had to mow, But not a number did he know— Nor seemed to care.

"The part I want," he wisely said, "Is hollowed out and painted red." "I had the number in my head" "But I forgot."

"It holds the thing-um-bob in place" "Steen inches from the long iron brace" "That holds it to the big main base" "And keeps it set."

"You surely know just what I mean," "It broke before on this machine." "That what-you-call-ums it's behind" "And just between."

"That thing that moves along like that," "About as big as this old hat" "Would be if you would mash it flat" "I think you'll find."

The dealer sighed and shook his head, "I don't know what you mean," he said. "We'll have to search the extra shed," "So come along."

"If you would only tax your brain" "So that the number you'd retain," "Or bring the old part in, 'tis plain" "You'd not go wrong."

From end to end he searched the bins, Clawed over castings, bolts and pins And skinned his fingers and his shins, It made him cuss.

But still he searched with sinking heart, (He'd seen two customers depart), And in the last bin found the part, 'Twas ever thus.

"That's it," the farmer cried in glee; "I thought 'twas number thirty-three." "Now what's the price of that to me?" "Great Jumpin' Frogs."

"Not forty cents? An awful rate." "For a thing that hasn't go no weight" "Oh well, just put it on the slate" "Till I sell my hogs." —(C. A. L.) in Tractor Farming

As wages for farm labor and feed for horses go up in price, motor power on the farm becomes more and more important. The state council of defense announces that the University of California will at the Short Course for Farmers at the university farm at Davis from November 5 to 15 offer classes in the operation, repair, and management of gas tractors with special demonstrations of the use of motor-cultivators.

Ben Franklin says: "Plow deep while sluggards sleep, and you'll have corn to sell and keep." If Franklin had seen a tractor plow, he'd have said: "Don't wait, go buy one now."

## Five books FREE

You will find information worth many dollars to you in the five Giant books. They are written to show Pacific Coast land owners how to save and make money by using

## GIANT FARM POWDERS

STUMPING — AGRICULTURAL

Here are the subjects of the books that are sent FREE:

**Stumps** 24 pages, 23 illustrations. Explains and shows the most effective methods of blasting. Tells you how to get out stumps of any size cleaner, easier and cheaper by using either of the Giant Farm Powders—Eureka Stumping Powder for dry work and Giant Stumping Powder for wet work.

**Boulders** Shows how to place charges for stone blasting. Gives amount of Giant Powder required to break up stones of various sizes.

**Crops** No deep plowing or cultivation is half so effective as subsoiling with the Giant Farm Powders. If you believe in tillage you believe in subsoil blasting. Ask for the Giant Subsoiling book, "Better Farm Tillage."

**Trees** Trees in blasted beds develop twice the root systems of trees in unblasted soil. They have the loosened earth and the food needed to do it. In blasted soil, rains and irrigation water sink down many feet and there is no surface run-off. The Giant Tree book, "Better Orchard Tillage," gives complete direc-

tions for orchard soil improvement.

**Ditches** You can blast out clean, deep ditches with Giant Powders. The sides will be sharp and even. The Giant Book, "Better Ditching," tells how to do it.

## Register of Merit Jerseys

There will be more Register of Merit breeding in the Stanislaus Jersey Breeders' Sale than has ever before been offered in a single sale in California, and the cows to be sold are mostly young, many of them not yet of mature age. A great Register of Merit cow, three of her daughters, and one granddaughter, all with good Register of Merit records, will constitute the greatest Register of Merit family ever sold at either private or public sale in the whole West.

### 22 Fresh Cows and Heifers

make an especially attractive feature of this sale, and there is a large number of heavy springers besides.

### A Few Good Bulls

Stanislaus County Jersey breeders are well sold down on bulls, and only six will be offered in this sale, but every one of them is a good one. There are two service bulls that are worth going a long way to buy. One of them has a great bunch of daughters in the sale, part of them in milk, and you can see for yourself the sort of daughters he gets.

Place of Sale: MODESTO FAIR GROUNDS

**Modesto, California**

**TUESDAY, SEPTEMBER 25, 1917**

#### Contributors to the Sale

## Who's Who

With the issue of August 11 the Cultivator started its series of "Who's Who" articles to bring before its readers some of the livestock producers of California who are responsible for the large development of the industry. Where did they come from and how long have they been engaged in California development, also how do they look, so pencil and camera are to be used, and some homely, everyday photograph and notes regarding them will bring us closer together. Bear in mind we say "homely photographs" and not photographs of homely people. The idea we wish to convey is that so far as possible we will secure photographs in everyday surroundings at the homes of the livestock producers.

Other sketches and portraits will appear in the next and following weeks.

Written for California Cultivator By F. F. Stonerod

#### W. J. BEMMERLY

HERE is a typical Western cattleman, the kind we read about in fiction, only in real life he is far better than if painted in the story book.

For instance; he does not like to be

boots on. There are the big bro Stetson and flowing mustaches too, making a vivid picture which fits properly with his chosen calling breeding beef cattle, particularly Herefords.

He has been in the business more than 25 years, but it was only ten years ago that he bought the nucleus of his present large herd of registered animals. He got the first one from the old Sparks herd in Nevada and from the late Jack Splawn and from the late Jack Splawn North Yakima, Washington. His favorite animal is old Ruby Splawn really the most valuable and faithful individual in the entire herd.

The one place where Mr. Bemmerly differs from the story book cattleman is that he is a college graduate, having California as his alma mater. He is one of the large Yolo County families of Bemmerleys whose estates comprise a considerable part of the county. He is just fifty and, as he puts it, good for another fifty. If there is a better judge of a "cow critter" in the state we do not know who it could be. A survey of his big herd at any time will bear out this statement.

W. J. Bemmerly

called "Mr." just plain "Bill" suits him best. His fellow cattle breeders at a recent convention affectionately gave him the title of "Hereford Bill," and "Bill" he is to all who know him. Then he does not like to wear ordinary shoes. He has been wearing cowboy boots since he was in short trousers and he says he will wear them till he dies, which is merely another way of saying that he intends to die with his

Probably the best insight into the character of the man can be had from the following verse which the writer copied from its place in a frame hanging above his desk unknown to him:

"The thing that goes the farthest,  
Toward making life worth while,  
That costs the least and does the most,  
Is just a pleasant smile."

## Field Notes from the Live Stock Men

Guy H. Miller of Modesto, Stanislaus County, writes:

"Several cows in Venadera Herd of Jerseys finished official year's tests in August, and I wish to report same: Lora of Venadera, a two-year-old heifer sired by our leading herd sire, Altama Interest, produced 8242 pounds of milk, making 386 pounds of fat, equal to 454 pounds of butter 85 per cent fat. She was 24 months old at time of starting on her year's test. Her dam is the well known cow, Lorna of Venadera, test 691 pounds of butter in one year.

"Lora is the heifer that won the California Jersey Breeders futurity stake for 1916 and won the five-day butterfat contest for heifers under 30 months old at the state fair last year. She is the ninth daughter of Altama Interest to qualify for the Register of Merit with official yearly test.

"Ramona of Venadera, a two-year-old heifer sired by Owl of Belleview, started her year's work at 24 months old and produced 556 pounds of milk, making 333 pounds of butterfat, equal to 392 pounds of butter. Her dam is Gazelle of Venadera, one of the Register of Merit daughters of Marigold's Exile King. Gazelle has a test of 403 pounds of butter in a year as a two-year-old.

"Constantia of Venadera, a two-year-old by Owl of Belleview, started her year's test at 27 months old. For the year she gave 4640 pounds of

milk, making 302 pounds of fat, equal to 355 pounds of butter. Her dam, old Signora Bruce, test 573 pounds of butter in a year, grand champion the state fair in 1908, and winner the five day butterfat contest.

"Cygnia of Venadera, a two-year-old heifer, also a daughter of Owl of Belleview, started her year's test 23 months of age. For the year she gave 4711 pounds of milk, making 314 pounds of fat, equal to 314 pounds of butter. Her dam, Astrea of Venadera is one of the Register of Merit daughters of Altama Interest and has a test of 435 pounds of butter in a year made as a two-year-old.

"While none of these heifers has made a phenomenal test they are very creditable records, and like the other official yearly tests made in Venadera Herd, they were made under practical dairy conditions, the cows being milked and fed but twice daily and running with the herd.

"Owl of Belleview, sire of three of these heifers, is a very richly bred bull that heads the Jersey herd at the University Farm at Davis. He was used in Venadera Herd a year before being selected by Professor True to head the farm herd, and the heifers are his first daughters to be tested. The three entering the Register of Merit qualify their sire for entry in the Register of Merit also and he has four other daughters in Venadera Herd on test and making good.

## Breed Leaders

Every breed of live stock has its outstanding character the same as the human kind. A great dairy cow has proved her ability to produce anywhere up to 15 tons of milk annually; the trotting horse has secured his record around two minutes; the beefmaker has shown his ability to make the least amount of feed into the greatest amount of food; swine, sheep and others of the live stock family have shown themselves great characters. In addition—and here is where their worth is proven—these animals can transmit their productive power to their offspring.

Beginning with the issue of August 4 the Cultivator gave an account of Pieterje Bloom of the university farm dairy herd. Some things she has done and more that her daughters have done were chronicled. She was a most worthy leader in this series of articles. Others of her kind follow. More of the "handsome is as handsome does" type of animals will be given in the columns of the Cultivator during the next few months.

Written for California Cultivator By C. A. Briggs

Ciruela Josephus

**A** MODESTO bull owned by A. M. Bibens, a fine upstanding fellow, well marked as to color with good lines, back and other points, Ciruela Josephus 91717, born December 18, 1911, reflects credit on his owner and his breeding.

His sire, Josephus of Ceres, is the sire of five A. R. O. daughters. His dam, Hermana Mechthilde Ciruela 3rd, traces back to Ignaro De Kol who is the sire of ten A. R. O. daughters. His great grand dam is that wonderful world's record cow, Aralia De Kol, with a record of 21408 pounds of milk and 563.2 pounds of butter in one year. He is getting fine calves and proving very satisfactory as a herd sire.

**AYSHIRES HEEDING THE CALL**  
The Ayrshire Breeders' Association sends the following:

America calls for increased production. Man and beast are putting forth their utmost efforts. East Newton Nellie, Imp., an Ayrshire cow owned by the L. A. Reymann Estate, West Virginia, has just completed a yearly Advanced Registry record, producing 18,156 pounds milk, 774.70 pounds butterfat. She was dropped April 1910 and has already an official two year old record of 9440 pounds milk, 407 pounds fat, unofficial three year old record of 9603 pounds milk, 433 pounds fat, unofficial mature record of 10,392 pounds milk, 438 pounds fat, previous to her official record of 18,156 pounds milk, 774.70 pounds fat just completed. She is an easy and persistent milker. Her biggest day's work was not more than 60 pounds and she finished her test with more than 40 pounds, showing a fluctuation of only 20 pounds between her high and low mark. This record of East Newton Nellie is the second record of over 18,000 pounds milk made by the Reymann Estate herd within the past few weeks, August Lassie, also a seven year old, having just completed a record of 19,582 pounds milk, 831.50 pounds fat.

### CARE OF KIDS

Writing in the Milk Goat Bulletin Winthrop Howland says:

"It is unwise to separate very young kids from their dam unless for an urgent cause, or in the instance of the kids being bucks, in which case they

are frequently raised on a bottle. Should it become necessary to take the kids from their dam it is best for both parent and offspring to separate them immediately as the longer they are together the stronger becomes the attachment. Let the kids nurse the colostrum in order to insure free movement of the bowels and then take them entirely away from the dam. If another doe recently fresh is available she may be used as a foster mother, and if she will not adopt the kids she must be held for them to nurse at least five times a day until the kids are about three weeks old, after which from four to three times a day is sufficient. Very young creatures require frequent feeding and but little at a time. Kids compelled to go on too infrequent nursing will overfeed and suffer in consequence from digestive disorders, whereas if permitted to nurse at will they seldom if ever have any such trouble. The earliest age at which a kid should be weaned is three months, but if good, lusty stock is desired the young should not be fully weaned until five months of age. If no foster mother is available young kids may

be nursed on a bottle. It is profitable to give them goats' milk, but they can be raised on cows' milk. The milk should be blood-warm when given them. The nursing bottle and nipple must be carefully sterilized by boiling before being used again. By placing the bottle in cold water and letting it come to the boiling point the risk of cracking the bottle is avoided. On no account should kids be fed milk otherwise than by the bottle, as drinking it from a pail or pan causes serious digestive disorders."

The secret of permanent success in farming hinges around the ability of the farmer to buy and sell, to manage, to produce the majority of the grain and roughage which he feeds and to walk his crops to market. The farmer who converts his long feed and grain into pork, mutton, beef, milk, cream, butter, and the like, walks his crops to market in a more concentrated and valuable form. Dairying means dollars when one gets well started in the business. It is a business of immediate returns.

Imperial County will exhibit at the San Francisco Land Show.

## Are You Starting in Registered Holsteins?

If you are just starting in Registered Holsteins, or if you are an old-time breeder in Registered Holsteins, you will no doubt want to study the pedigrees of the Registered Holstein Cows and Bulls offered at the Auction Sale at Kent, Wash., October 3rd and 4th, 1917. Most of the cows are bred to Herd Sires—the pedigrees of which are also given. All of these cows are of good conformation.

**VISIT SEATTLE AND PLAN TO ATTEND THIS**

**Two Days  
Sale**

**Auction Sale**

**160 Registered Holsteins**

**KENT, WASH. (Near Seattle)**

**Oct. 3-4,  
1917**

On the above dates Auction Sale will be held in Carnation Stock Farm Sales Pavillion, Kent, Wash., by Carnation Stock Farms and John L. Smith, Hazelwood Farm, Spokane, Geo. A. Gue, North Yakima, Wash., Auctioneer.

This space will permit only giving the general announcement.

Holstein breeders should send for catalogues and study the pedigrees of the animals offered, as the future of most of these animals is quite promising.

### CARNATION STOCK FARMS

#### 75 Registered Holstein Cows

of good breeding—most of them in calf, bred to Johanna McKinley Segis (the 40 pound bull), King Segis 10th, Matador Segis Walker and Dutchland Governor Sir Colantha—will be offered by the Carnation Stock Farms at this sale.

#### 10 Registered Bulls

All of which have been raised on our farms. Among them is Korndyke Rag Apple Milla, 163749, a son of the famous Rag Apple Korndyke 8th, and carries 75 per cent of the same blood as the bull that sold for \$20,000 at the Detroit sale in June, 1916.

#### Health Guaranteed

All animals offered by Carnation Stock Farms will be guaranteed for Health by Inspector of United States Bureau of Animal Industry. Special Catalogue gives full details.

### HAZELWOOD HOLSTEIN FARM

#### 70 Registered Holstein Cows

will be offered at the sale by Mr. John L. Smith of Spokane.

Holstein breeders will remember the class of animals owned by Mr. Smith's Hazelwood Farm, among which were many prize winners at State, Interstate and National shows.

#### 5 Registered Bulls

will also be selected from Mr. Smith's herd—and offered at this sale.

Full description of Cows and Bulls is given in Special Catalogue—sent free upon request.

#### Don't Miss this Sale

This sale promises to be one of the most interesting on the Pacific Coast—to breeders as well as dairymen.

## Elliott-Brant Rancho Guernseys Are Persistent Producers

The results of our first two years of official testing show our herd to average 10,172.28 Pounds of Milk and 507.97 Pounds of Fat. One half of these cows were heifers with first calf who averaged 8,670.24 Pounds of Milk and 436.01 Pounds of Fat (only 7 pounds under the average of all A.R. records). Our mature cows averaged 12,710.5 Pounds of Milk and 621.52 Pounds of Fat (120 pounds over the average of the mature cows of the breed).

A bull from these cows will increase the production of almost any herd.

**Elliott-Brant Rancho, - Owensmouth, Cal.**

## Santa Anita Rancho

Anoakia Breeding Farm

**ARABIAN THOROUGHBREDS:** Two-year-olds, sired by imported Stallion Ibn Mahruss, head of our Arabian stud. Dams are the choicest thoroughbred mares of Santa Anita Rancho.

**SADDLE HORSES:** Some of which were sired by Ibn Mahruss, world renowned imported desert saddle stallion, and Don Castano, a five-gaited Kentucky saddle Stallion. These horses are mostly three-year-olds.

**POLAND-CHINA AND BERKSHIRE BOARS:** Four to nine months old. Sired by famous Poland-China herd boars, Banker's Boy and Glenview Wonder. And Berkshire boars, Grandson's Duke and Fashion's Longfellow 5th. The dams are from the very best blood lines. Most all these animals have winnings at World's Fair. Write for catalogue.

**HOLSTEINS:** We will sell a number of young bulls. Some sons and grandsons of the noted Lorna of Rico Vegas, and bulls from one World Record cow and two California State Record Cows. Write for details.

Correspondence Invited

**Anita M. Baldwin**

W. H. TAYLOR, Superintendent

Santa Anita, Cal.

## Closing Out Sale of Live Stock at a Bargain

An Opportunity to Secure a Choice Lot of Young Holstein Heifers Sired by Registered Bulls from Full Blood Unregistered Dams.

- 30 Head of 15 to 18 months old Holstein heifers now being bred to Registered Holstein Bull.
  - 4 Head of Grade heifers.
  - 7 Head grade four and five year old cows.
  - 1 Registered two year old Holstein Bull, Segis Paul Pontiac de Kol Burke.
  - 1 Two year old Guernsey Bull, sired by May King of Fern Ridge, a bull that took third at the San Francisco Exhibition in 1915, Dam Imported Lady of the Forgettes.
- Wish to sell in single lot and will make special price, on the above stock.

ALSO a choice lot of brood mares, Jacks and Jennets at a bargain price.

F. V. Gordon  
Owner

## One of the Good Ones

Written for California Cultivator By C. A. Briggs

**JERSEY** heifer owned by C. D. Hayworth of Modesto has recently completed a test that puts her in a place of honor as a producer. She was one year nine months and 28 days old when he began the test on July 2, 1916.

Her records by months were:

July 815.3 pounds milk 29.986

fat. A total for the year of 7300.7 pounds of milk and 337.138 pounds butter.

An examination of the above figures will show a remarkable uniformity of monthly production over the entire year, the twelfth month showing less than two pounds of butterfat below the record of the first month. This heifer weighed on the day of finish-

Lorna of Rico Vegas, 360977

pounds fat; August 843.6 pounds milk 33.111 pounds fat; September 736 pounds milk 36.579 pounds fat; October 682.6 pounds milk 33.925 pounds fat; November 591.4 pounds milk 32.467 pounds fat; December 545.4 pounds milk 32.996 pounds fat; January 512.9 pounds milk 31.44 pounds fat; February 494.6 pounds milk 31.802 pounds fat; March 560.4 pounds milk 33.231 pounds fat; April 520.9 pounds milk 32.087 pounds fat; May 500.9 pounds milk 30.805 pounds fat; June 496.7 pounds milk 28.709 pounds

fat. She was treated at all times in the same manner as the rest of the dairy herd of which she is a part. From July to the middle of November she received a small feed of grain, the balance of the time only corn ensilage and alfalfa hay. She is the first daughter of Lorna Altama Interest, Mr. Hayworth's herd bull. Her grandsire is Altama Interest who has a long record of grand championships to his credit. Her granddam (dam of Altama Interest) is Lorna of Venadera with a record of 691 pounds of butter in a year.

## Live Stock Classifications

**S**OME most interesting material—of special interest to attendants at the fall fairs—is given in a newly issued federal bulletin, "Farmers' Bulletin 822." It says:

One of the principal objects of a livestock exhibition is to bring before the stockmen and the public a standard of excellence toward which all may strive in the improvement of domestic animals. The educational value of such an exhibition will depend largely upon two things, namely, the classification of the animals to be exhibited and the judgment of the official who passes upon the merits of the exhibits. The two are absolutely dependent upon each other in presenting the lessons which the exhibition should teach.

The classification of livestock used at many of the county fairs is such that it is of little instructive value to the public and often causes criticism alike of the judges and of fair officials. As an example, the following class is not uncommon: "Best aged stallion, any breed." In this case all aged stallions, regardless of whether they are of the pony type, saddle type, light-harness type, or draft type, are brought into competition without any qualifications whatever. Should a pony stallion be placed first, a saddle stallion second, and a draft stallion third, there is sure to be confusion in the minds of the audience and criticism of officials. Each class at a livestock show should represent a definite type of animals which have some definite function or purpose.

The chief value of livestock exhibitions or shows, whether under the auspices of community, county, state, or larger organizations, lies in their educational features. Livestock shows and fairs have been an important factor in the improvement of farm animals, since it is the show ring which designates the types and standards that breeders of animals strive to produce. These standards generally are based on market and economic demands.

The absorbing interest of competition in the show ring stands as the chief incentive for the breeder to exhibit his animals. If he annually enters into competition with other breeders, he will surely improve the quality and type of his herd or flock. The great value of the livestock show ring for the less experienced breeder, however, is in the demonstration of standards which may be followed. The best qualified persons obtainable are found officiating as judges at the large exhibitions. These men know the requirements for the animals which they judge, and through them breeders become better acquainted with the standards for the breed in which they are interested and also with the faults and good points of their own exhibits.

While the chief value of exhibitions is educational, the livestock exhibits at county fairs are often so poorly classified that frequently the educational value is largely lost. It is the purpose of this bulletin to discuss in a general way some of the factors which, if properly handled, will help

## Farm Sanitation

Will Increase Your Profits  
by Keeping Live Stock  
and Poultry Healthy.

## Kreso Dip No. 1

Easy to Use. Efficient. Economical.  
Kills Sheep Ticks, Lice, Mites and Fleas.  
Helps Heal Cuts, Scratches and  
Skin Diseases.

## Prevents Hog Cholera.

Experiments on live hogs prove that

utte County is discussing the farm  
iser question.

to increase the value of the livestock  
exhibit.

According to the premium list of  
the California State Fair the follow-  
ing are:

### Base Dates

Ages of livestock are computed as  
follows:

Horses, asses and mules from Jan-  
uary 1.

Beef cattle, from September 1 and  
January 1.

Dairy cattle, from August 1 and  
February 1.

Sheep and goats, from January 1.

Swine, from actual date of farrow-  
ing.

Poultry, from January 1.

## Jersey Resolutions

The American Jersey Cattle Club  
has formulated resolutions from  
which we take the following:

I will not kill, nor permit to be kill-  
ed, a productive Jersey cow, nor any  
of her promising female offspring.

I shall bring my heifers to maturity,  
not only because this is now a pa-  
triotic duty, but because a good Jersey  
cow has the earning capacity of \$1000  
securely invested at five per cent;  
and surely it is folly to sell for \$125  
or less a machine which equals the  
earning capacity of \$1000.

I will not keep or use a poor bull in  
my herd. My resolve is to breed up,  
not down, to the end that each gener-  
ation of my herd shall be an improve-  
ment on the preceding one, because  
my country needs better stock as well  
as better and more bountiful produc-  
tion.

I will intelligently study feeding so  
that the production of my herd may  
be equal to its capacity

I will use every endeavor to pre-  
vent the waste of skim milk, as it  
constitutes a fine food for human be-  
ings.

I shall plan intelligently to grow my  
cattle feed on my own farm as far  
as possible and thereby lower the  
cost of production to my customers  
and increase my own profits at the  
same time. As in all other lines of  
work the nation has the right to de-  
mand efficiency and low production  
cost on my part.

I will do all in my power to main-  
tain the fertility of the soil in my  
care, realizing that I simply hold my  
lands in trust for coming generations.  
The welfare of my country in the fu-  
ture depends upon the conservation of  
the fertility of the soil, and I resolve  
that I will do my part along this line  
so that I will be enabled to give a  
good account of my stewardship and  
hand on to my successors lands better  
and not worse from my having lived  
upon them.

## About Dairying

**F**ROM a series of questions  
and answers issued by the  
agricultural extension de-  
partment of the I. H. C.  
service we note the follow-  
ing points:

There are about twenty-one million  
dairy cows in the United States, val-  
ued at \$596,000,000.

The most important points in suc-  
cessful dairying are:

Interest in the work, proper feed  
and care, the Babcock test, good  
sires, promptness, regularity, and  
sanitary conditions.

Every farmer should have some  
cows because the cow produces the  
most and best food at the least cost;  
brings in a steady income; converts  
cheap roughage into profit; makes the  
farm worth more; builds up the soil;  
means living at home; puts farming  
on a cash basis.

Dairy communities are prosperous  
because the cow will earn a greater  
per cent profit for the money invest-  
ed in her than it is possible to get out  
of any other investment on the farm.  
She converts cheap roughage into  
high priced food products, builds up  
the soil, means more thickly settled  
communities, leads to live stock  
farming which is the basis of per-  
manent agriculture.

The five leading dairy breeds are  
Holstein, Jersey, Guernsey, Brown  
Swiss, Ayrshire. A Holstein, Skylark  
Ormsby, produced 1205 pounds of  
butter fat in one year, about 1440  
pounds of butter, 27,761 pounds of  
milk.

The average dairy cow in this coun-  
try produces about 4000 pounds of  
milk a year and approximately 160  
pounds of butter fat.

The cow is the greatest producer  
of human food. Analysis made by  
the Missouri experiment station  
shows that the actual food value in  
the carcass of a 1250 pound steer was  
548 pounds of protein, fat and min-  
eral matter, and that the actual food  
value of the milk produced by one

cow in a single year amounted to  
more than 2200 pounds of food matter  
in the way of protein, fat, sugar and  
mineral.

A pure bred animal is one the an-  
cestry of which, for many generations,  
has been selected for some definite  
purpose, in the case of the dairy ani-  
mal for the production of milk and  
butter.

A grade animal is one, the ancestry  
of which, on one side, is of pure  
breeding and the other of mixed or  
unknown origin.

A scrub animal in stockman's par-  
lance is an inferior animal, the off-  
spring of an inferior ancestry and of  
mixed breeding.

The sire is half the herd; improve-  
ment must come through pure bred  
sires.

The experience of many dairymen  
has proved that it is not good busi-  
ness to depend entirely upon stock.  
The better way in general is for the  
dairyman to raise his own stock and  
improve the herd by breeding the  
best heifers to pure bred sires, select-  
ing the best cows and disposing of the  
ordinary stuff. It is better to grow  
into the dairy business than to go  
into it.

The per cent of improvement which  
will be made in the first generation  
of the offspring by breeding common  
cows to pure bred bulls is approxi-  
mately: First cross, 50 per cent; sec-  
ond cross, 75 per cent; third cross, 87  
per cent; fourth cross, 93 per cent;  
fifth cross, 96 per cent; Sixth cross,  
98 per cent.

Four things necessary for the im-  
provement of the dairy herd are good  
feed, good care, pure bred sires, and  
selection of the best cows for breed-  
ing purposes.

The chief advantages of the Bab-  
cock test are that it puts dairying on  
a business basis, points out the star  
boarders, shows up the poor stock,  
and enables the dairymen to select  
cows that pay a profit.

A cow testing association is an or-

## Abortion In Cattle

**High Meat and Milk Prices  
Make Abortion Control  
Doubly Necessary**

Authorities are alarmed at the in-  
creasing losses caused by contagious  
abortion. Some state it is causing  
more damage to livestock than tuber-  
culosis.

Careful breeders are realizing that  
meat and milk products will continue  
to mean more money to them. They  
are accordingly taking active steps  
to systematically and efficiently  
stamp out abortion from their herds.

Research men of the United States  
government and other institutions as-  
sert that there is no absolute abor-  
tion "cure," but all authorities agree  
that abortion can be controlled and  
the losses stopped.

No serum or vaccine has been found  
that gives any protection. These au-  
thorities all recommend that a thor-  
ough system of sanitation be followed  
on every farm, including treatment of  
bull, cows, calves and buildings. This  
is the only certain means of control-  
ling and preventing abortion—steril-  
ity, premature birth, retained after-  
birth in cows and white scours in  
calves. These all seem to be symp-  
toms showing the presence of abor-  
tion germs.

In the case of abortion itself, the  
germs inhabit and develop in the al-  
buminous matter in the tissue lining  
of the uterus and vagina, and here is  
where the fight for control must be  
efficiently and systematically waged.  
The germs produce an acid slime or  
discharge which eats the lining of the  
uterus and vagina and prevents heal-  
ing of the torn, raw membranes.

To correct this condition, B-K, the  
powerful antiseptic, used as a douche,  
kills the abortion germs, dissolves  
the albumin, removes the slime, neu-  
tralizes the acid, cleans the tissue and  
thereby puts the organs in a condition  
for natural healing.

B-K does not irritate, but is soothing  
and healing to torn membranes, and does  
not cause straining. Other substances  
such as carbolic acid, cresol, iodine, etc.,  
are more or less irritating, do not dis-  
solve albumins, but tend to coagulate or  
thicken them, thereby preventing de-  
struction of the germs and thorough  
cleansing of the infected tissues.

B-K is a powerful germ-killer. Its  
remarkable germ-killing strength is  
plainly marked and guaranteed on every  
package. B-K contains no poison, acid  
nor oil—it is clear and clean as water  
and as easy to use. B-K may be used  
freely in the drinking water, helping to  
destroy the germs which accumulate in  
the tanks; may also be used effectively  
to disinfect the bull and wash calves at  
birth.

B-K is handy. You have in one jug, all  
ready for use by simply mixing with  
water, your treatment for calves, cows  
and bulls; also the best disinfectant you  
can possibly have for general use—no  
special mixing of various ingredients—  
saves trouble and mistakes—insures  
promptness, accuracy, convenience and  
successful results.

Contagious abortion is being success-  
fully controlled in many herds by follow-  
ing our simple plan with B-K. One man  
writes: "I have been using B-K accord-  
ing to directions and the results have  
been very gratifying. My cows have ev-  
ery one passed the time for aborting and  
are calving all right in a natural way.  
I had lost \$1,500.00 on my cows and feel  
that B-K has cleaned up the trouble en-  
tirely."

B-K is sold by dairy and farm supply  
houses, druggists, general stores, etc.,  
everywhere. If your dealer does not have  
it, send us his name.

**Clean and Clear  
as Water**

Write for testimony  
of users and rea-  
sons why B-K is  
used so successfully  
in this work.  
Send for these use-  
ful booklets.

## Abortion In Cows and Mares

May be Prevented If

### HOOD FARM ABORTION REMEDY

Is given promptly and freely on the first sign of abortion. Hundreds of breeders have saved valuable animals with this Remedy. By its use, with Hood Farm Breeding Powder, Abortion has been stamped out of many herds when other remedies failed. Write for full information and prices. Mention this paper.

C. I. HOOD CO., Lowell, Mass.

### HOLSTEIN-FRIESIAN CATTLE

From my herd of 75 registered Holsteins, can spare ten yearling heifers and heifer calves splendidly bred, closely related to 30 and 40 pound cows.

One bull calf, whose eight tested nearest dams averaged 31 pounds weekly butter record.

One service bull from 29 pound dam. 102 pounds milk one day. His two nearest dams through sire yearly record average 21,000 pounds milk and 812 pounds butter.

Write me for low prices and further information.

Frank Reed Sanders, Mesa, Ariz.

## El Dorado Holsteins

Headed by  
SEGIS PONTIAC DE KOL BURKE  
LUIT.

Out of a 32.76-pound 4-year-old. His sire is a son of Riverside Sadie De Kol Burke, 32.29 pounds butter in 7 days. Herd officially tested for 7 and 30 days.

Alex Whaley, Tulare, Cal.

## Dependable Sales Service

We offer an unexcelled service for the conduct of dispersal and consignment sales of registered livestock. Sales conducted anywhere. Write for terms and dates.

California Breeders' Sales and Pedigree Co.

Sales conducted in all parts of California and Adjoining States. 25 Years' Experience.

BEN A. RHOADES, Auctioneer  
1601-2-5 So. Main St., Los Angeles, Cal.

ganization of farmers or dairymen, usually from 20 to 30 members, organized for the purpose of increasing their profits. The dues in the association are usually \$1.50 per cow per year.

The cow testing association takes the "guess" out of the dairy business, accounts for profits and losses, culls out the unprofitable cows, gives a record of each cow, means intelligent feeding and care, and causes a better community spirit among the dairymen and breeders.

A tester goes once a month to the homes of each dairyman belonging to the association, weighs and tests a sample of milk from each cow, and weighs the food which each cow consumes. The tester also advises the dairyman in the matter of food and care of his cows and the improvement of his herd.

In 90 per cent of the cases it is more profitable to grow the feed on your own farm than to purchase it. It may be necessary however, to purchase concentrates, such as cotton seed meal, gluten feeds, etc.

The essential points of a good dairy barn are good light, proper ventilation and sanitation.

Above all have a silo. Too much cannot be said of the importance of the silo in the dairy business. The silo prevents waste in feeding, enables the farmer to keep more stock, makes cheap milk, saves storage space; enables the farmer to utilize cheap roughage and insures succulent feed.

The one great essential to success in the dairy business is interest in the work and determination to win out. When we have an interest in the work we are determined to take advantage of the things which mean success. We should see that the stock is kept healthy and comfortable, that they receive the proper feed and water, and they are housed in clean and well ventilated stables. Cleanliness is essential to successful dairying. Utensils should be kept clean. We should use the Babcock test and belong to a cow testing association.

## Alfalfa

J. M. Bomberger Writes for California Cultivator  
Readers of the Wonder Plant and Its Culture

THE general shortage of alfalfa in all parts of the United States west of the Mississippi River is the direct cause of present hay values, and the prospects are for still higher prices during the next few years because the acreage of alfalfa will not be greatly increased so long as other field crops command war prices.

Such are the writer's conclusions

that there will be any general seeding of land to alfalfa, here or elsewhere, as long as summer grown crops remain at such attractive prices, there are many fields planted to such crops that are not profitable because the land is not adapted to their culture.

Much of this is adapted to alfalfa though, and because of the clean culture practiced all season such land is in ideal condition for fall alfalfa

Wealth in Alfalfa

On the ranch of Frank M. Wilkinson, Salt River Valley. Description of methods followed on this ranch was given in article by M. E. Bemis in Cultivator of August 11.

after four months of extensive traveling through the alfalfa growing sections of the Middle West, Northwest and Southwest.

I found that conditions in all of the territory named are similar to those in our own alfalfa growing sections of California, that a great many fields have been plowed during the last two years to make room for wheat, barley and other small cereals, corn cotton, beans, etc.

In eastern Nebraska and eastern Kansas the supply has been materially reduced because of winter-killing of the plants last winter.

While I have seen no figures regarding the decrease of the alfalfa acreage in California the past year it is very apparent that beans, corn and other summer crops occupy much land previously seeded to alfalfa. This too in spite of the fact that even at present market prices alfalfa is yielding more profit than most summer grown crops, and it is a permanent, sure crop while many of the others are highly speculative and uncertain.

While it does not seem probable

seeding if rain or irrigation is available between September 15 and November 15.

Fall seeded alfalfa, if not planted too late, secures a good start by spring, and I know of numerous cases where it has produced almost as heavily as old stands the first season.

A little more seed to the acre should be used in fall seeding so that the ground will be well occupied by alfalfa plants. This makes it more difficult for weeds to get a start in the spring.

Considering the market outlook for hay the decrease in acreage which is characteristic of all of the large alfalfa producing districts of the country and the further fact that alfalfa will produce more animal feed per acre than any other known forage crop, at a time when the entire world needs more meat animals and their products, it appears that the farmer who plants alfalfa this fall or next spring will enjoy prosperous times for the next five years.

The state fair is being held this week in Sacramento.

## CONTROL OF HOG TUBERCULOSIS

OFFICIAL figures show that nine per cent of the hogs slaughtered during 1916 establishments under federal meat inspection were

affected with tuberculosis in some degree. In certain dairying sections over 25 per cent had the disease. serious has hog tuberculosis become in some localities that buyers are avoiding certain regions known to be badly infected and some packers are buying subject to post-mortem inspection with the loss for tubercular hogs falling on the feeder. Other buyers who do not buy subject to post-mortem

inspection protect themselves offering a lower price for all hogs, which case the careful breeder suffers equally with the careless one.

The two principal ways of preventing hogs from becoming tubercular are by keeping them away from tubercular cattle, and by cooking or pasteurizing all skim milk and cooking all garbage before it is fed to hogs.

### A CHANGE OF BASE

"And now, Bella," said little Mary to her doll, "you must lay down for while and go to sleep."

"You should say 'lie down,' dear," put in little Mary's mother.

"Bella," said Mary impressively, "I'm going to lie you down, so do you cry."

"Lay you down," dear," came the second gentle correction.

Mary was much puzzled. Whenever she said, it seemed to be wrong. She declined to cope longer with the intricacies of the English language. "Bella," she announced, "I think you better sit up!"—Los Angeles Times

### WOOL AND MUTTON

In order to increase the wool and mutton supply of the country the sheep and wool bureau will endeavor to get an amendment through congress to the pending war revenue bill which provides a federal tax of \$1 per head on dogs. Such a law will yield up both revenue and dogs. Of the two the latter is more important. A buyer will be stationed at the different Missouri markets to bid on the breeding ewes and ewe lambs that otherwise would fall into the packers' hands, and send them to the country to farmers who will buy them.

We note in the "American Fertilizer" that Los Angeles will be headquarters for a \$150,000 sage brush potash plant, the organization of the company having been perfected. The plant will be located on the Mojave desert. It is said "The process of extracting potash from sagebrush is not entirely new and has been experimented with at various places. The process this company has adopted affords a higher percentage of results than ever obtained before. The price of potash at present justifies a large outlay of capital and it is not improbable that our plant will develop into twice the projected size. War or no war, the demand for potash for fertilization purposes will continue for a long period."

One of the problems in producing animals and animal products economically is the cost of protein feed. By protein feed is meant the feeds that supply a large per cent of protein. Usually a large amount of protein must be bought by dairymen and swine breeders because their facilities for producing these concentrates are rather limited. But farmers should produce as much of the protein feeds as possible, for they do not wish to buy any feed if it can be avoided.

Dairying to some farmers signifies dollars. To others it means drudgery. As a dependable line of farming that yields an attractive income each week or month, dairying is excelled by few branches of agriculture. If a farmer begins milking cows on good land the land will improve and the crop yields will increase. If he breaks into the business on a poor farm it will not be many years before the productivity of his fields will begin to spruce up.

## Veterinary

Answers in this column by Dr. Wm. Petrie, 2714 South Harvard Blvd., Los Angeles, are without charge. For immediate mail answer remit \$1.00. In writing questions give full symptoms or particulars of injury of animal. Unsigned communications receive no attention.

### Hard Milker

Is there any way of opening teats of a cow that milks hard? — Subscriber.

The opening in the teat can be enlarged by cutting or stretching the sphincter muscle that surrounds the opening. In cutting the muscle great care must be exercised or one is liable to cut too much and do more harm than good. It is better to stretch the opening by inserting an instrument that is made for that purpose. There are several different kinds that can be purchased from veterinary instrument manufacturers. Some are of the form of a small collar button. These can be inserted after milking and left until the next milking. The instruments are of different sizes and by using the small ones first and changing to the larger ones you can soon get the desired results. The instruments should be thoroughly cleaned every time before inserting them to avoid introducing any dirt that will irritate the parts and cause inflammation.

### When to Wean a Colt

Do you consider one time better than another to wean a colt? — Subscriber.

A colt should be weaned at four months. It should be fed a little grain on the side for some time before so the change from the mare's milk to dry feed will not come too suddenly. At four months it is best for the mare and colt to be separated. If the mare is giving much milk at the time you might milk her out once a day for a few days but that will usually adjust itself without any assistance.

### Cow Drying Up

I have a fine Holstein cow that I am feeding heavily on winter squash beside bran and beet pulp. I find that she is gradually decreasing in her milk. Can you tell if the squash is the cause?—Subscriber, Pacific Beach.

The squash probably has something to do with it. It is a very rich feed and should be fed sparingly. Some green corn fodder and other sloppy feed will probably bring her back all right.

### Barb Wire Cut

What can be done for a colt that was caught in a barb wire fence and cut on the front of the hind leg near the hock? The injury was deep enough to take out a good size piece of bone. The wound healed too rapidly and there is a bunch of flesh grown out about the size of a man's fist. The leg is still swollen.—Subscriber, Orland.

The tendon was probably cut and in healing it usually forms quite an enlargement. You can reduce it some by applying an ointment made of two ounces of tincture of iodine, one dram of iodine crystals and six ounces of lard oil or bacon fat. Mix. Apply once a day. To reduce the swelling of the leg feed laxative feed and put a teaspoon of nitrate of potash in the feed or water twice a day for a week.

### Melanotic Tumor

Following your advice earlier in the season I had a veterinarian remove a bunch from near the eye of one of my horses. He said it was a tumor that is common on gray horses but rarely found on dark colored horses. It was healing nicely but of late a small bunch has appeared in the corner of the wound and it is not healing so rapidly as it was. I have done a bit of surgical work myself but did not care to do this as it was so near the eye, but after seeing it done think I could do it myself. What shall I do with it now?—Subscriber, Santa Ynez.

It was a melanotic tumor and in removing it a little of the tissue was left and it started to grow again. It is made up of the coloring matter that goes to color the hair black and as a gray horse becomes nearer white the coloring matter may accumulate in a mass and form the black tumors. Cut it out yourself and burn out the wound with a red hot iron. That will probably stop the growth.

### Contagious Conjunctivitis

We have a ten months old calf whose eyes are affected something like a cataract. Water runs from them and the sight is affected. What can I do for it?—Subscriber, Nevada City.

This is a disease of the eyes that is contagious and is quite often seen in cattle and sometimes in hogs. It causes inflammation of the front covering of the eye (the conjunctiva). It

ter the suffering may be relieved and recovery hastened. They often become totally blind for a short time and are not able to find their feed. Also the light increases the pain and

### KORNDYKE RAGAPPLE MILLA

Korndyke Ragapple Milla 163749, is a little over two years old, having been born April 5, 1915. He is not only the brother of King Champion Ragapple, but carries 75 per cent of the same blood as this bull. His dam is Dam Fairview Milla Korndyke, who has a

record at one year 11 months and 12 days of milk 363.9 pounds, butter 15.755. She is a daughter of the great Pontiac Korndyke.

Korndyke Ragapple Milla will be sold at the auction sale at Kent, Washington, at the Carnation Stock Farm sales pavilion, October 3-4.

may affect part or the whole of a herd. Little can be done to stop it but by bathing the eyes once a day with warm water that contains one dram of copperas to the gallon of wa-

aggravates the trouble. They should be put into a darkened stable for a few days and fed succulent feed. They usually recover completely if cared for.

## Jerseys for Net Profits

You're in the dairy business for profit—the net profit that your herd has made you at the end of the year will determine the size of your bank account. Jerseys yield the largest returns from every ounce of feed—proved by tests at two great expositions. Jersey milk averages 5.3% butter fat, 9.1%

solids not fat—highest of all breeds. Buy a Jersey bull. Write the breeders advertised below for prices, pedigrees, etc.

## Feeding Dairy Cows

THE feeding of a dairy cow should be governed by her capacity to produce milk. By keeping a daily record of each cow's production the skillful feeder soon finds that some cows in the herd respond to an increased allowance of feed and return a good profit on it, while others are limited in milk capacity and overfeeding them is unprofitable. Profitable feeding requires a thorough knowledge of the individual cows as well as of the values of feeds.

Under most circumstances the cow should be fed all the roughage that she will eat up clean, adjusting the grain ration to the milk production. Only when the cow tends to become overfat should the quantity of roughage be restricted.

A grain mixture should be fed in the proportion of one pound to each three pints or pounds of milk produced daily, except in the case of a cow producing a flow of 40 pounds or more, when the ration can be one pound to each 3½ or four pounds of milk. An even better rule is one pound of grain each day for every pound of butterfat produced by the cow during the week.

Feed all the cow will respond to in milk production. When she begins to put on flesh, cut down the grain.

For the most profitable milk production, the cow must be fed a balanced ration at the cheapest price such ration can be provided. By balanced ration is meant the combination of nutrients in such proportions and quantities as the cow requires to maintain her bodily functions and produce milk. These nutrients are classified as protein, carbohydrates, and fats. Protein is one of the prin-

cipal constituents of milk; fats and carbohydrates perform much the same functions, that is, produce energy and heat, and in the balancing of a ration are usually classed together. If the cow is given a ration containing an excess of either element the excess is liable to be wasted; hence the economical importance of a balanced ration.

Corn silage, corn stover, hay from the common grasses, straws of the various cereals, and cottonseed hulls may all be classed as low in protein content, while legume hays, such as alfalfa, the clovers, cowpeas, soy beans and oat and pea, are classed as roughage high in protein. Grain and concentrated feeds are the chief sources of protein, and the mixture should be made to fit the class in which the roughage belongs.

### Compounding a Grain Mixture

A few simple rules for making up a grain mixture are given briefly below:

Make up the mixture to fit the roughage available. With roughage entirely of the low protein class the grain should contain approximately from 18 to 22 per cent of protein, while with exclusively high protein roughage the grain ration need contain only about 13 to 16 per cent.

Select grains that will furnish the various constituents, especially protein, at the least cost, using home grown grains if possible.

Be sure that the mixture is light and bulky.

The mixture should be palatable.

See that the grain has the proper physiological effect upon the cow.

All these suggestions should be kept in mind in order to obtain the best possible combination of grains.

## Watch Pigs for Necrobacillosis

OUTBREAKS of necrobacillosis, a disease affecting pigs, are likely to occur in summer in insanitary pig pens. One form of the disease, commonly known as "sniffles," and another developing symptoms somewhat akin to hog cholera are the commonest expressions of this ailment which has many forms.

The form known as necrotic rhinitis may be recognized by lumps or swellings which appear on some part of the head or face of the pig, usually on the snout. Pigs so affected eat but little as a rule and sneeze repeatedly, often expelling a bloody material. Treatment for this form has to be applied in the early stage. It consists in opening the swelling, removing the pus, and applying in the opening made, with a syringe, either of these remedies: Glycerine 15 parts, carbolic acid one part; or nitric acid one part and water six parts; or a 50 per cent solution of iodine. If the swelling has become extensive treatment is of little value and the destruction of the animal is recommended.

Pigs affected with the second form of the disease, necrotic enteritis, show a lack of appetite, become unthrifty, emaciated and weak. The absence of red spots on the bellies and the normal or at times subnormal temperature of the animals differentiate this ailment from cholera. With this form, as in the first, the remedy must be used before the disease has made progress. Proper diet, physics, and intestinal antiseptics form the treatment recommended.

Frequent and thorough cleaning out of pens, troughs, feeding floors, sheds, and hog lots may prevent this ailment of pigs. A liberal quantity of lime should be applied in pens, houses and adjoining lots. Pigs, shotes, and older hogs should not be allowed to feed from the ground. Suitable feeding floors, preferably of concrete, and troughs of some non-absorbent material that can be cleaned out, washed, and disinfected frequently are recommended.

### HOW TO DOUBLE VALUE OF FEED

Many farmers are today feeding animals that return only 95 cents to \$1.00 or \$1.15 worth of marketable product for each dollar's worth of feed.

That is unpatriotic, declares the University of California, for it is just as essential to conserve animal foods as human foods, and by proper methods of breeding and feeding, steers, hogs, sheep, and dairy cows will return from \$1.50 to \$2.50 of marketable product for each dollar's worth of feed.

The University of California is going to cooperate with the nation's great food conservation movement by conducting short courses at the university farm at Davis from September 24 to November 2 in which the livestock growers of California will be given opportunity to learn the best modern methods of animal husbandry. In these short courses the latest results of research will be demonstrated as to how to produce better livestock at less cost, how to prune and spray fruit trees, so as to produce greater yield, how to cultivate the best advantage, and how to economize labor on the farm.

# The All Northwest Egg Laying Contest

By Helen Dow Whittaker

**W**E have been working in the All Northwest contest to answer the question "Is egg production practical patriotism in the Northwest?" In other words, "Does egg production pay?"

To answer the question we have taken six birds (five competing) from 186 flocks in the Northwest—from flocks much known and heralded from flocks unknown in out-of-the-way places; from trap-nest strains and Hoganized strains and strains that were frankly untested; from February hatches and May hatches and June hatches from hen brooders and room brooders; from 21 varieties and 11 states and provinces. We brought this average flock together at Pullman. We handled them on a strictly commercial basis (trap nesting excepted) not in individual pens of six birds specially catered to but in flocks of from 48 to 54. What you want to know is: "How has it paid?" "Can I make it pay on my chicken ranch?"

The birds in the contest have paid current feed and labor costs by the returns from market eggs and have left a margin over sufficient I think to take care of over-head charges. Just what that margin is I will tell you exactly when the contest is completed. I will give you some facts and figures to date but first I want to go on record as saying that I believe beyond a doubt there has been in the Northwest in the past year no boost for egg production so big, so vital and so far reaching to the fair minded poultryman as the feed and egg record summaries of the All Northwest Egg Laying Contest.

Now for some figures: In July 856 birds laid 11,067 eggs which sold at three cents each for \$332.01. It cost \$184.40 for feed and straw litter with corn bought at \$80 per ton, wheat at \$72, oats at \$50 and beefscrap at \$4.50 a sack and other things in proportion except straw for litter which is always cheap in the Palouse. The birds averaged not quite 13 eggs per bird and the feed cost per bird was 21½ cents. Any fair minded reader will admit I believe, that a good egg ration can be fed now at the rate of \$2.60 per bird per year and that 13 eggs per bird for July is not a phenomenal egg yield, yet on this basis 856 birds returned \$143.61 above feed and litter cost.

Further, let us look at some figures

for the average White Leghorn for the month of July. She laid 15 eggs which sold for 45 cents. Her feed bill was 20 cents leaving a profit of 25 cents. In other words 1000 of the average White Leghorn in the contest would have given just about 50 per cent egg yield for July. Their eggs at 36 cents per dozen would have sold for \$456.30. Their feed bill would have been \$202.30 and the return \$254.00 above feed cost.

If egg production at a profit needs a further justification here it is from contest reports from beginning to date. It has cost to feed the average White Leghorn from October 14, 1917 to August 1, 1918 approximately \$1.65 and she has returned in the nine and a half months since the contest started over and above her feed bill \$1.20.

I am anticipating that the next two and a half months will run the feed cost to about \$2.20 and judging from the present condition of the birds as to moult and rate of egg production the year's profit I think will run over \$1.50.

The second contest begins November 1, 1917. Forty-seven pens have been entered to date. The leading pen for the month of July was White Leghorns, which laid 115 eggs, an average of 23 eggs in 31 days.

Highest pens to date in each breed are:

Mrs. H. G. Moses, A. W. Wade, E.  
Corson.

feed mashes in the morning and grain at night. Practically every man feeds differently. Each feeds what is at hand and adapts himself to the circumstances.

"Mr. Brown thought that this war in the end would benefit the industry in many ways in this country. It would bring an end to many of the fads. People would study the business and proceed along saner lines. Each new condition that the country faces brings new problems, but we should meet and solve them in the same way as the English poultrymen have. The high prices of eggs are going to educate the people to the value of eggs, so that after the war the prices never will be as low again and the consumer will not object so much to paying reasonable prices for eggs in the future. The whole of Europe will have to practically be restocked with poultry at the close of this war, and they will have to depend largely on America for their breeding stock. He stated that in the present crisis and scarcity of food that England regarded her poultry highly, for it was proven that the hens of England were picking up \$45,000,000 worth of grubs and waste products from the soil which would absolutely be wasted and which no other animal would be able to use to turn into food.

"The only difference between the poultry business of today and a few years ago is this: Then feed was cheap and a poultryman could make a lot of mistakes and still stay in the business. He can make more money today than he did then, but he must know how. Feed prices are certain to go down some when the growing corn crop goes on the market. Eggs are certain to be higher than ever known. Many incubator companies are already booking more orders in advance than in any previous season. The worst is over, in my opinion, and those who have stock and eggs for market or breeding are certain to make some good money if the right methods are used in handling their poultry.

"There is no reason to be greatly alarmed or discouraged. American poultrymen certainly have as much backbone, as much patriotism, as much love for the business, and as much ability to adapt themselves and their methods to meet varying condi-

tions so as to solve poultry problems, as have the poultrymen of England or Canada. Don't sacrifice the Great American Hen. The facts and conditions don't justify it. Meet the issue with right methods and you are certain to find the business as profitable for the next 12 months as at any time in the past."

## Wonderful Egg Producer

Any poultry raiser can easily double his profits by doubling the egg production of his hens. A scientific tonic has been discovered that revitalizes the flock and makes hens work all the time. The tonic is called "More Eggs." Give your hens a few cents' worth of "More Eggs" and you will be amazed and delighted with results. A dollar's worth of "More Eggs" will double this year's production of eggs, so if you wish to try this great profit-maker write E. J. Reefer, poultry expert, 4266 Reefer Bldg., Kansas City, Mo., who will send you a season's supply of "More Eggs" Tonic for \$1.00 (prepaid). So confident is Mr. Reefer of the results that a million dollar bank guarantees if you are not absolutely satisfied your dollar will be returned on request and the "More Eggs" costs you nothing. Send a dollar today or ask Mr. Reefer for his Free poultry book that tells the experience of a man who has made a fortune out of poultry.

## The Best Feed on the Market

Has the highest protein at the lowest price, \$2.30 per 90-lb. bag, subject to market changes; see that your hens eat as much Dry Mash as they do grain; feed them lightly of grain in the morning and make them work for it; either have a scratching pen or spade up a part of the ground and rake the feed under; keep "A-1" Dry Mash in a dry form before them all day; about one hour before feeding them their grain in the evening WET their Mash and let them eat all they will; put it on top of the Dry Mash, then feed them all the grain they will eat; this stuffing process will give them a full crop to carry them through the long night of inactivity; analysis is printed on every bag; give it a trial. At Your Dealers or

# Science Says Buttermilk

Bulletin 162, just issued by the Department of Agriculture, states that Buttermilk is the only preventative of White Diarrhoea. It has been proven that many birds apparently in perfect health have these germs in their system and that they are transmittable to their progeny. Science has discovered that the Lactic Acid Bacilli of Buttermilk kills these poison germs. Write to Berkeley for this important bulletin, free.

The Dry Buttermilk in GLOBE A-1 BUTTERMILK MASH contains 10,000 live Lactic Acid Bacteria to the cubic centimeter.

Globe A-1 Buttermilk Mash is a high protein feed, free from any filler.

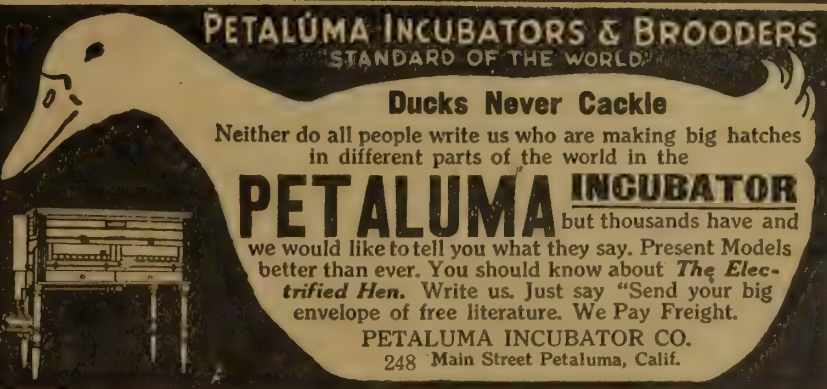

**Globe A-1 Buttermilk Mash** will prevent bowel troubles, keep your flock in glowing health, produce more eggs to market, better eggs to hatch.

Costs no more than non-buttermilk mash.

## GLOBE MILLS, Los Angeles

Write at once for valuable feeding information and sample, free.

# Buttermilk Dry Mash

## Classified Liners

The direct selling method from producer to consumer, and a clearing house for over \$1,000 readers, weekly.

Liner rates: Single insertions 3c per word; yearly contracts 2½c per word. 35c per issue minimum charge.

### TREES

Here is Your Opportunity to Secure All citrus trees. We offer several thousand 2-year-old lemons; Eureka and Villa Franca, also Washington navel; also several hundred Valencia on sweet root. We call these good trees and we know whereof we speak. **ALBERT JACKSON, Upland, Cal.**

By Far the Lowest Priced means of reaching a buyer for what you have to sell is through classified advertisements in California Cultivator. The cost is only 1 cent per word per issue, with a minimum of 35 cents.

For Sale—15,000 sour orange seedlings. One year, 8 to 20 inches. Nothing better. \$25.00 f. o. b. **Randall Bros. Nursery Co., Whittier, Calif.**

Citrus Trees—All kinds, any quantity. **Butler's Morning Side Nursery, Laramie Park, Cal.**

Citrus Nurseries, **Murphy Oil Company, East Whittier, California.** Selected stock for sale; inspection invited.

### WANTED

Wanted—Man in each California county to represent established California company. Should have rig or auto to get around. Good pay and several weeks' work to right parties. Address **J. H. Yetter, Sales Department, 810 Santa Marina Building, 112 Market St. San Francisco, Cal.**

Wanted—Energetic young married man to take charge of herd of 140 registered Holsteins. Must be an all around practical dairyman, competent to do anything connected with a dairy and breeding establishment, including the making of weekly and yearly records. **Geo. A. Smith, Corcoran, California, Phone 241.**

Wanted to Purchase good second hand pipe and screwed well casing. I can furnish all sizes of pipe and casings in first class condition. Write for prices. **W. G. Leahy, 1002 Santa Fe Ave., Los Angeles.**

Wanted—A first class stock and dairy man to look after herd of Holstein cows. Good opening for a competent man. Address **Dairy, California Cultivator.**

Wanted—Position as head milkster and herdsmen. Familiar with testing, scientific feeding and treatment of disease. Good reference. **Box D, Cultivator.**

We Buy Weed Seeds—Mustard, rape, anise, bitter clover, etc. Send samples. Write us, stating quantity and price. **Globe Mills, Los Angeles.**

One of the Most perplexing problems to farmers and ranchers is that of help. A small liner ad in California Cultivator is the quickest and easiest means of securing farm help.

Weeds Wanted—Flowers, seeds, berries, leaves, barks, roots, 2c. to \$2.50 lb. **National Drug Co., Yakima, Wash.**

### POULTRY

White Leghorn Baby Chicks—We are hatching from 2 and 3 year old hens that are proven good layers. We did not sell our last year cocks but have them to breed from and are not forced to use young immature cocks. We are hatching a limited number of R. I. Reds. **Lyon Hatchery, Gardena, Cal.**

Day Old Chix—Barred Rocks, Rhode Island Reds, Black Minorcas, Brown Leghorns, Buff and White Orpingtons. Other popular breeds a matter of correspondence. **Enoch Crews, Seabright, Calif.**

Poultry Wanted—We pay the highest market price for all the local poultry we can get, no matter how large the quantity; also fresh ranch eggs. We remit immediately. **National Poultry Co., 607 E. Third St., Los Angeles, Cal.**

200-290 Egg Leghorn, Wyandottes, Rocks, Reds, Anconas, Orpington Pullets, Cockerels. Breeders. Hatching eggs, chicks for high-priced broilers. **C. Beeson, Pasadena, Cal.**

"Eastman's Bred-to-Lay" Barred Plymouth Rocks. Fall chicks, eggs, cockerels. **Fairmead Poultry Farm, Fairmead, Cal.**

### SEEDS AND PLANTS

Alfalfa Planters, fill your fall requirements NOW with GREEN-GOLD seed. High quality because of personal field selection. Low price because of direct dealing. Send for samples and prices. **Romberger Seed Co., Modesto, Cal.**

ORDER YOUR SEEDS NOW. If you are going to need any seeds for next season now is the time to render your orders. It may be impossible for you to buy what you need later. **V. A. Peterson Alfalfa Seed Co., Arbutus, Cal.**

ALFALFA SEED OUR SPECIALTY. Alfalfa Seed—Common variety. Hairy and Smooth Peruvian. Grown under ideal conditions. Do not buy until you have compared my prices and samples with seed others offer. **E. F. Sanguinetti, Yuma, Arizona.**

Rhubarb—\$112.00 from one acre. A crop every month of the year. Write to me and I will tell you how you can do as well. **J. M. Stone, Lodi, Cal., Route 4.**

Vetch Seed—N-w crop clean seed, \$4.00 per 100 lbs., on car. Alsike, Red Clover. Price on application. **Carlton Nursery Co., Carlton, Ore.**

20,000 Yellow Calla, Elliottiana; Pink Calla, Rhe-nani. Spotted Leaf White Calla. **William Richard Nursery, Santa Cruz, Cal.**

New Crop Alfalfa Seed now ready. Not the lowest in price, but high in quality. **Leo Turner, Yuma, Arizona.**

### PATENT ATTORNEYS

Patents that protect are secured through **The PACIFIC COAST PATENT AGENCY, INC., Savings & Loan Building, Stockton, California;** send for our little booklet on "PATENTS."

### HOGS

Registered Durocs—We offer for sale a choice service boar out of a daughter of Modesto King and by a grandson of Burk's Good E Nuff; young sows and boars out of Model Queen of U. F. and by a son of Golden Wonder; young sows and boars out of a granddaughter of John Orion and sired by a son of Model Col; three young boars out of a great sow of Crimston Wonder breeding and sired by a son of King's Col. Every one cholera immune by the simultaneous method. Registered, crated free of charge. If you cannot visit us write for prices. **Derryfield Farm, L. O. O. F. Building, Sacramento, Cal.**

Chester Whites, the Billiken Brand.—Your duty is to raise more hogs and increase the meat supply. The demand for pork exceeds the production. Get started with some of these Chesters: 3 bred sows farrowed in April, 1916, due to farrow in September, and October; 13 October gilts bred to farrow in October; 3 October boars ready for service. All first class in every respect and good enough to fit and show at the different fairs this fall. All are cholera immune and will be registered free. Write for price list and booklet. **C. B. Cunningham, Box C, Mills, California.**

Grape-Wild Farm Berkshires—World's Fair Grand Champion Grand Leader 2nd heads our herd, not only himself a champion but the sire of champions. At the 1916 California state fair his daughters won all of the senior sow classes including the grand champion sow. At the 1916 Oregon state fair a Grand Leader sow was junior champion. We are offering a number of choice boars of exceptional breeding and are also booking orders for fall pigs. **A. E. Humphrey, Escalon, San Joaquin Co., Cal.**

Large Yorkshires—Choice spring boars, gilts and weaned pigs from champion sow P.P.I.E. or from breeding of champion boar and sow Sacramento, 1916. If you see them grow you will like them. **Riverina Farms, Paradise Road, Modesto, Cal.**

Superba, World's Grand Champion Poland-China boar and one of the greatest sires of the breed. Spring boars ready for service, also few sows bred to this noted sire, reasonably cheap. **Rough's Greenfields, Arlington Sta., Riverside, Cal.**

Wanted—Farmers, orchardists, livestockmen to use classified liner advertisements like this. Thousands of people read every ad and the cost is only 3 cents per word per issue, minimum 35 cents. Extra lines of white space above and below cost only 16 cents per line.

Duroc Jersey Boar for sale—Two years old, from Kansas City. \$50.00. Cost \$100.00 when pig. Excellent sire. Object, change of blood. Two Berkshire sows, one with pigs. **Jersey Queen Farm, San Jose, Cal.**

Duroc Jerseys—Our herd is noted for its sons and daughters of the breed's most popular champions, Grand Model and Great Wonder. **Peters, Lamson & Walker, Devore, San Bernardino County.**

Poland-Chinas—A number of magnificent young boars for sale, just ready for service. Don't overlook my offering of splendid sows at the Poland-China sale on October 17 at Hanford. **Will Bernstein, Hanford, California.**

Rancho Rubio Durocs.—Nothing to sell at present. A fine bunch of gilts and a few extra good service boars for this fall. **Elmer Lamb, Ceres, Cal.**

Big Type Durocs. Well grown out February and March pigs of either sex in any quantity. We ship only the tops and butcher the culls. **F. M. Johnson, Napa, Cal.**

Most Money in Duroc-Jerseys. Bred sows and weanlings, either sex all the time. **Delta Farm and Live Stock Co., Colton, Cal.**

Large Yorkshires—The ideal hog for the progressive farmer. Service boars and fall pigs, both sexes, for sale. **A. L. Tubbs Co., Calistoga, Cal.**

Large Type Poland Chinas are prolific and profitable. Can furnish boars any age at reasonable price. **J. A. Crawshaw, Hanford, Calif.**

Large Type Poland-Chinas—Very best stock. Prices reasonable. Weanlings my specialty. **C. R. Hanna, Riverside, Cal.**

Model Herd Berkshires bred for size and quality. Weanlings and gilts. **J. L. Gish, Laws, Calif.**

Carruthers' Farm Berkshire Hogs. Our herd won Premier Exhibitor prize at the P. E. I. E. Exposition, Mayfield, Cal.

For Sale Poland-Chinas—Big type choice bred gilts from registered stock. **G. E. Sheldorf, Healdsburg, Cal.**

Poland-Chinas—A few good breeding boars. **S. F. Williams, Orland, Cal.**

### LIVE STOCK

Butte City Shorthorns, Shropshires, Berkshires and Ponies. Stock of all ages for sale. Can supply one or a carload. Get our prices and descriptions before buying. **Butte City Ranch, Box C, Butte City, Glenn Co., Cal.**

Registered Shires—Blackhawk Stock Ranch. Importers and Breeders. **Barton & Ward, Burlingame, Cal.**

### LUMBER

Lumber—Sash—Doors—Plumbing Supplies—Building Materials of all kinds, new and 2nd hand. **A. R. W. Shingles 50c per bundle. Send list for estimate. Dan P. Dolan, 1670 Mission Street, San Francisco, Cal.**

### CATTLE

Pedigreed Bull Calves, Registered \$50.00, unregistered \$25.00. Service bulls \$75 and up. Good individuals from producers. Cows with yearly records at a profit. Tuberculin tested. Write or come and select. **Horses. N. H. Locke Co., Lockeford, Cal.**

D. O. Lively Stock Farm, Inc., 216 Hobart Bldg., San Francisco. Breeders of Hereford cattle. A few choice heifers for sale. We buy and sell live stock on commission. **Farm at Mayfield, Cal.**

Venadera Jerseys, the herd with official yearly records. Calves of both sexes for sale. **Guy H. Miller, Route 1, Modesto, Cal.**

Registered Holsteins out of ARO Dams. Grandsons of Peterje Malt Ormsby, 25.55 pounds average 5.81. **Geo. Kounias, Modesto Farms, Modesto, Cal.**

Veramont Stock Farm Pure Bred Herefords. Location Plumas County. Ideal for stamina and vigor. Bulls for sale. Address **H. M. Barngrover, San Jose, Cal.**

Registered Holstein Bulls from high producing dams for sale at reasonable prices. Also a few choice females. **McAlister Sons, Chico, Cal.**

Thirty high-grade Holstein Cows and one registered Holstein bull. **Chas. Hubbard, Riverdale, Calif.**

Young Holstein Bulls, bred right, grown right, priced right. **Creamcup Herd, M. Holdridge, Modesto, Calif.**

Registered Jerseys—both sexes for sale. **J. R. Carhart, Fullerton, Calif.**

Holstein Bulls from record cows. Prices right. **A. M. Bibens, Modesto, Calif.**

### MACHINERY

WHY BUY NEW? SAVE HALF. Material guaranteed. It's second hand after used few times, but not worn out. Few engine snags; new 1½ h. Olds, cost \$75, for \$39; 6 Stearns, \$89; 8 Stover; 9 Foss, \$145; 12 White & Middleton, \$295; 34 Lambert, \$390. Many others.

NEW USED WOOD GALV. TANKS. All sizes, used heavy 1500 gal. galv. with metal covers, cost new \$75, for \$28; 100 gal. galv., \$7.50; 10,000 redwood, \$75. Fine, heavy 10,000 galvanized, \$135; 16,000 corrugated galv., \$195; 4x4x4 galv. tank, \$15; 25,000 gal. redwood with fine stand, \$135; 3000 redwood and stand, \$75.

WINDMILLS, SPECIALLY PRICED. 8, 10, 12, 16-ft. sizes. Pump as much water as new ones, at half price; costs nothing for fuel; 12-ft. Samson and swell steel tower, \$88; 16-ft. aeromotor and tower, \$135. Many other snags.

PUMPS, CYLINDERS, PIPE. 2½-in. two-runner hor. centrifugal pump, \$50; 2-in. rotary, \$22; 5-in. two-stage Byron Jackson hor. cent. pump, \$150; 8-in. hor. cent., \$150, pumps 200 in. water; 7 vert. cent. Krough, deep well double-acting No. 2 Ames, \$145. 30 Ames double acting deep well pump, latest model, all steel frame, high efficiency, less power required, cost \$900, used less than year, our price \$295. Large Bulldozer jacks, \$68. Plunger pumps, \$2 up. 5x6 air compressor, \$29. 600 ft. 7-in. irrigating pipe, 35c. All kinds brass pump cylinders, rods, big pipe fittings of every description.

RANCH MACHINERY. Walking plows, \$2.75 up; harrows and cultivators, Fresno, \$9 to \$12; wheel barrows, \$2.50 up; 350 ft. ¾-in. cable 6c; water troughs, 4; bone grinder, \$6.50; feed mill; sprayer; mowers, buck rake, \$20; belting, all sizes; sundries too numerous to advertise. Material guaranteed as represented or money refunded. Down town office **DEMMITT CO., UPSTAIRS 120 N. Main, Yards, 816 Yale, Los Angeles. Phones 15191; Bdwy. 1984, Bdwy. 3650.**

Gasoline Engines, the largest stock of used gas engines in California from 2 h. p. to 100. Thoroughly overhauled. Machinery Exchange, 733 North Spring St., Los Angeles.

For Sale—Exceptional Bargains. Gas engines, centrifugal pumps, concrete mixer, box nailing machine, friction clutch pulleys. Complete irrigation plants furnished. We also buy and sell all kinds of machinery for every purpose. Let us know what you have and what you want. We can meet your needs. Out of town machine work given special attention. **Commercial Iron Works, 497 Fifth Street, San Francisco.**

For Sale—Yuba Tractor No. 12 in A-1 condition. Plow and cultivator if wanted. Satisfactory reason given for selling. **P. O. Box 306, Colton.**

### MISCELLANEOUS

Famous Hairy Peruvian Alfalfa Seed—Highly recommended by U. S. department of agriculture. Only carefully selected seed shipped. Prices and samples gladly furnished on application. **E. F. Sanguinetti, Yuma, Arizona.**

Slacked Lime—Send for sample and information. Price right. Let me help you. **H. B. Matthews, 350 Woodberry Road Pasadena.**

Make Money writing short stories or articles. Good pay. Send for free information. **United Press Syndicate, Los Angeles.**

To Reduce the high cost of living, send for our Wholesale to Consumer Catalogue. **Smith's Cash Store, 112 Clay St. San Francisco.**

### FARM LANDS FOR SALE

NO PAYMENT DOWN. FARMERS ARE MAKING GOOD IN THE "PROJECT OF NO REGRETS" AT ORLAND, CAL. WATER FURNISHED BY UNCLE SAM. WE SUPPLY THE LAND AND ASK NO PAYMENT UNTIL YOU CAN MAKE SAME FROM CROPS. NO BETTER SOIL FOR ALFALFA, ALMONDS, OLIVES, ORANGES, LEMONS, ETC. WRITE US FOR U. S. GOVERNMENT REPORT AND BOOKLET "ORLAND FARMS." **F. D. BURR CO., 253 RUSS BLDG., 235 MONTGOMERY STREET, SAN FRANCISCO.**

Oregon, California Government Lands. Latest Green Booklet Free. Tell "How, Why, Where." Write **Joseph Clark, Sacramento.**

### HORTICULTURAL PRINTING

Catalogues—Good Printing. Specialists in preparing nursery, seed, poultry and live stock catalogues and all kinds of commercial printing. For prices and information address **WOLFFER PRINTING Co., 424 Wall St., Los Angeles.**

Our Printing Will Get Results for You. It will help to sell your goods and earn you profits. Send for samples and price list. **G. C. Gallagher, 441 Sacramento St., San Francisco.**

### RODENT EXTERMINATORS

United States Government Formula. Poisoned barley for killing rodents. In competition with other dealers we were awarded the contract to furnish this poison to the United States Government. How much do you need? Write for prices. **UNITED STATES SUPPLY COMPANY, MANUFACTURING CHEMISTS, NEW CALL BUILDING, San Francisco, Cal.**

### MARKET NOTES

Almond harvesting is in full swing in San Luis Obispo County, especially in the neighborhood of Paso Robles. The crop will run 60 to 70 per cent of normal. Navel orange growers are now hoping for more of a crop than it appeared they would secure soon after the June hot wave.

The apple crop of the northwestern states will aggregate, according to present estimates, 23,500 carloads.

The San Francisco market is now handling large quantities of raspberries, the third crop of the season. Twelve dollars per chest was realized for some of the earlier deliveries. The picking cost is becoming almost prohibitive, sometimes running to \$3.50 per chest. The strawberry picking price per chest is \$2.00, and for blackberries \$1.50.

Los Angeles flour prices recently dropped 40 cents per barrel.

Despite reports of the biggest bean crop ever, California stock is holding up to satisfactory prices and sales are being made continually. California's production of beans in 1915 was 3,868,000 bushels; in 1916, 4,175,000 bushels, and the estimate for this year is 7,268,000 bushels. Big eastern producing states are reporting a normal crop. (The above from United States Department of Agriculture reports.)

Weather which gave fears of early frosts in some of the corn states caused a flurry in the pit, but the "spell" has passed and promise of a big crop still remains.

War has cut the importations to the United States of some of the luxuries. In 1913 there were imported \$49,000,000 worth of diamonds, in 1915 the imports dropped to \$15,000,000. However, we are apparently "coming back," for the estimate is that this year's imports will aggregate \$48,500,000. Of laces and embroideries we imported over \$40,000,000 each year prior to the war; last year's imports aggregated \$27,800,000, while this year's estimates are \$22,800,000. Of fine arts before the war we imported \$50,000,000 annually, or thereabouts; the present year's imports will aggregate about \$22,000,000. Tobaccos, champagne, wines, etc. have all been reduced, but when it comes to perfumery we will receive more this year than any preceding year.

Eastern potato shippers are objecting to the increased carload minimum established to secure greater service from every car. The railroads are asking that the minimum now be placed at 60,000 pounds.

The committee of the International Apple Shippers' Association went direct from the national convention at Niagara for conference with Hoover to present the matter of storing, exporting and speculating in apples.

Shipments of dried fruits from California will exceed those of any preceding year.

Norway is open to receive shiploads of American apples if a way can be found to ship.

Italy manufactures ordinarily about 87,600 tons of tomato paste. This will be greatly decreased this year because of coal shortage.

### SOME BOOSTER

The Stockton Ad. Club has elected Arthur E. Kuehnmsted as its president for the coming year. Mr. Kuehnmsted is the publicity man for the Sperry Flour Company and writes the interesting and instructive advertisements of the Sperry people which have to do with poultry feeds. We may say that these advertisements which Mr. Kuehnmsted has written for the California Cultivator and other farm papers have resulted in boosting Sperry sales from 400 tons to about 1600 tons a month, or an increase of about 400 per cent. Do you read Sperry ads? Note how well they are written.

## PLAY THE GAME

Play the game! Play the game!  
For the game's tug-of-war  
And to win—that's the aim  
We are all fighting for.  
Hold 'em firm! Hold 'em fast!  
If we yield, ours the shame  
Till we triumph at last—  
Play the game! Play the game!

That was Washington's way;  
That was Marion's boast,  
And Decatur's that day  
Off the Barbary coast!  
Sound the tattoo of drums;  
Let the shrill life acclaim.  
Until victory comes,  
Play the game! Play the game!

Girdle up! Buckle to  
Never quail, never quit!  
Show 'em what we can do  
With our staunch Yankee grit!  
With a don't care a ——— slam  
For reward or for fame,  
Just for old Uncle Sam—  
Play the game! Play the game!  
—Clinton Scollard of the Vigilantes.

## SOME OF YANK'S TRICKS

Written for California Cultivator  
By Mrs. A. P. Robinson, Riverside

SOME years ago when we were living in Riverside, our youngest boy, who loved animals and especially dogs, came home leading a seven-months-old puppy, telling me one of the church ladies was leaving town and, wanting to get the doggie into a good home, gave it to him. Many a time before the youngster had brought some poor cur, pleading in vain to keep it, but this time he won the day, so was happy indeed.

Yank was naturally a smart dog, and he learned the following tricks himself, excepting to sit up, and that he always did without being told if he wanted anything. We had a triangle hanging under the big pepper tree near the back door. I always taught that to call the children home. Soon we noticed that whenever it was rung Yank would come running to us, wagging his tail and looking our faces as must as to say, "Here I am."

One day when the turkey gobblers got to fighting he ran up behind and gave one a good bump with his nose. Of course they stopped to look around, but soon began fighting again. Then he bumped them some more. So they quit.

He did love candy, or anything else that we ate. So when the boys saw him begging so for some they gave him a gumdrop, which, when he began to chew, stuck his teeth fast. It was more fun for the boys than the dog, but after that he always swallowed gumdrops whole.

Whenever we returned home we

always found him sitting in the driveway waiting for us. How glad he was when I would come out of the house wearing my sunbonnet! Then he knew he could go along to tend chickens or call on a neighbor, but it was amusing to see the doleful look on his face if I appeared dressed for church or to go shopping. Then he just knew he had to stay at home alone.

Yank had such a big bark for the size of him, and used to scare the small boys, and especially the little darkies who used sometimes to come and buy milk of us, I called him in the house one day, fearing he might snap at their bare legs, as he didn't like them. After that he would stand ready to dash around the corner as they were leaving, simply to get me to let him in the house.

He liked raw fish almost as much as a cat, and the fish man always gave him some when I stopped him to buy. One day I wondered what was the matter with Yank, and looking out saw the fish wagon coming. As soon as he could hear that fish horn he would try to attract my attention.

He knew the sound of the older boy's motorcycle and would dash down the street and around the corner to meet him. Then if son ran him a race, how he did cry and yelp because he couldn't keep up, with his short legs. He was such an affectionate little fellow, and if any of the family was away for months he was just as glad to see them. He lived to old age and we have missed him ever since he died.

## HOUSEHOLD QUERIES

### Canning Pimientos

Please give recipe for canning pimientos. Should they be allowed to turn red before picking—to can?—Subscriber, Victorville.

Pimientos are much richer and finer flavored if canned ripe; if caught by frost before ripening the green peppers are very good, however. We give several methods of canning.

Whole Peppers—After they ripen take out the seeds and the tough inner stringy portions and pour boiling water over the pods. Let them stand five minutes, then pack in the little half pint or quarter pint glass jars honey and various condiments come in. Fill with boiling water and

## Courier of Soldier and Civilian

Our troops are now on the firing line in France. While at home every instrumentality of our government and private industry is being urged at top speed to insure victory. The telephone is in universal demand as courier, bringing to the front men and the materials of war.

From the farms the telephone courier brings foodstuffs; from the mines the telephone courier calls forth metals; from the factories this courier gathers manufactured products. The telephone courier leads troop and supply trains to the front; summons fighting flotillas and trans-

ports; and, in fact, leads practically every contributing unit of supply to the firing line.

At such a time, when the government is straining at its task and every industry is loyally contributing its energy, this national courier is constantly being used to call up the reserves. It is at the base of every contributing activity.

The right of way must be given to the military for the direction of troops and to the government for the marshaling of endless supplies. To do this, and also make the telephone serve all other needs, both patriotic and private, all must economize.

B-K • B-K • B-K • B-K • B-K • B-K • B-K • B-K

sterilize an hour a day for three successive days, or give them five hours of continuous cooking on one day. So little is needed as an addition to cooked corn, cabbage, salad, sandwiches, etc., that the small jars are preferable. The peppers mold easily after being opened, and it is a waste to have large cans of them.

**Sterilization Method**—Cut open peppers, clean out seeds and cut in strips the size of a string bean. Pack into jars which have been rinsed in warm or cold water and cooled. Cover to the brim with salt water (one pound salt to seven gallons of water). Rinse cap in cold water and place on jar but do not clasp or screw down as the steam which forms inside must find an outlet. Place a board with holes in it or a few pieces of lath nailed crosswise in bottom of boiler. Set jars on this rack and pour water in, filling even with neck of jars. Heat gradually to a boil, then boil for three hours. "Boiling" does not mean "simmering." Count time from the time water begins to boil and keep boiling steadily for the full number of hours specified. Keep lid on boiler. Remove jars while boiling hot and set aside to cool. Do not set on a cold or wet surface or in a draft.

**Cold Water Process**—Cut off stem end of peppers and remove seeds. Parboil until tender but do not cook long enough to cause them to lose their shape. Pack in jars, pour cold water over them and seal. They are ready for use any time during the winter and may be used for stuffing with coldslaw, leftover meats, etc.

**Pickled Pimientos**—Wash one peck of red pimientos in cold water, cut a slice from the stem end of each and remove the seeds; then cut in thin strips by working around and around the peppers, using a pair of scissors. In this way the strips may be kept as long as one desires. Cover with boiling water; let stand three minutes, drain and plunge into ice water to cover, in which there is a large piece of ice. Again drain and pack solidly into pint glass jars. To one quart of vinegar add two cups of sugar; bring to the boiling point and let boil 15 minutes. Pour over the peppers to overflow the jars, adjust the covers, and store in a cold place.

### WINTER GOODIES

**I**t is a wise housekeeper who converts part of the summer fruits into winter "goodies" to fill the call for candy or "rush order" desserts. Fruit paste so common in the tropics is little known in America. Old time Virginia housekeepers put up peach and damson "leather," a similar product.

These pastes make a delightful dessert served with cream cheese or nuts. They can be used to garnish cakes, custards and platters of cold meat or eaten as a candy.

Fruit paste is made by boiling down fruit pulp, adding sugar and drying out slightly.

### Peach Paste

Cook peaches tender and rub through colander after draining off juice (this can be bottled and used as a fruit syrup). Allow half pound sugar to one pound fruit. Cook over slow fire till very thick. Pour paste out in thin sheet on flat dish or marble slab which has been rubbed over slightly with salad oil. Place in sun or draft for two days, covered to protect from insects. If should be dry enough not to be sticky, but by no means hard or leathery. Cut paste

in fancy figures or in any way desired, place on wax paper, sprinkle with granulated sugar, stand in draft two days more. To store, dip again in granulated sugar and pack in boxes or jars like candy with layers of paper between.

### Damson Plum Leather

"Damson leather," as it is known in Virginia, is made without straining, the skins left in, dried as above. The sheet of leather is then sprinkled with granulated sugar, rolled like jelly roll and cut into slices. Dry these slices in granulated sugar and pack in jar.

### Apple Conserve

One pound apples to three-quarter pound sugar and half pint water. Slice apples, quartered and peeled, in syrup till clear. Dry in sun till no longer sticky. Roll in granulated sugar and pack in tin boxes or glass jars, in layers with wax paper.

### Damson Plum Conserve

Four pounds plums, three pounds sugar, one pound shelled nuts, two oranges, one pound raisins. Remove the seeds and chop the plums. Peel the oranges and slice thinly one-half of the peel. Discard the other peel and the seeds. Mix chopped plums, orange pulp, sliced peel, sugar and raisins. Cook all together rapidly until bright and thick as jam. Add nuts five minutes before removing from the fire. Remove from fire, cool and pack into jars.

### Fancy Variations

These are only a few suggestions; there are endless varieties and combinations that can be worked out with these pastes. Use different fruits or pastes, dry partly and arrange in layers like layer cake. Or vary the layers by adding finely cut citron, candied peel or blanched nuts. With apple pastes different colorings and flavors can be used. Where fruit is abundant, fancy packages of these pastes might be put up for Christmas presents or church bazaars.

Onions can be placed in a fruit jar after being washed and the rubber cover placed on the jar; this will make the onions crisp and tender and they can be kept in the icebox without odor.

# STERILIZATION OF MEATS IN JARS

By W. V. Cruess

**W**ING to the composition and texture of meat its sterilization is very difficult and, if not properly done, the consumption of the product may cause illness or death by ptomaine or botulinus poisoning. Great care therefore must be taken in preserving meat to render it safe to use. The most satisfactory method is to heat it for 40 to 60 minutes in a pressure cooker at 15 pounds pressure (249 degrees Fahrenheit). It may also be safely sterilized by heating to the boiling point of water (212 degrees) three times at intervals of 24 hours. Each heating should continue for at least one hour.

## Chicken and Rabbit

Boil in slightly salted water until the meat is tender. Strip the meat

from the bones and pack into jars with a highly seasoned tomato or other sauce. The addition of the sauce not only flavors the meat but also facilitates the penetration of the heat. Several ripe olives added to each jar will improve the flavor. Place the filled jars in the washboiler sterilizer with their covers on loosely. Heat the water to boiling for one hour. Then seal the jars by applying the clamps or screwing down the tops. On the following day, boil again for one hour without loosening the tops. Repeat this heating the third day and invert the jars while cooling. The time of heating should be counted after the water is boiling vigorously.

If solder top cans and a pressure cooker are used, proceed as follows: After the cans have been filled with the hot meat and sauce and the lids have been soldered on, place the cans in boiling water for ten minutes with the vent holes open. The vent hole is a small pinhole in the center of the lid. Seal this hole with a drop of solder and sterilize the cans for 60 minutes in the pressure cooker at 15 pounds steam pressure. The steam pressure cooker is not so suitable for glass jars, as without special skill and experience considerable breakage may result from its use.

## Other Meats

Other meats may be prepared for canning by boiling or frying or cooking in other ways and the cooked meat may be sterilized by either of the above methods. It is also possible to pack the meat into the cans with little or no cooking. In this case the sterilization is carried out in the same way.

## CHICAGO HOT

This is an excellent receipt. I am making a Cultivator cook book and as I wish to have this in print would be very glad if you could publish it.

One peck ripe tomatoes, peeled, chopped and drained, one cup chopped celery, one cup chopped onions, one cup grated horse radish, one red pepper chopped, one green pepper chopped, two cups brown sugar, one-half cup white mustard seed, six cups vinegar, one-half teaspoon each cloves, allspice, cinnamon, and nutmeg, mixing thoroughly. Bottle without cooking.—C. D. Spangenburg.

## HOMINY GRITS

Another from the food administration:

"You don't eat grits or rice?"

The Vermont woman shook her head.

"Well, what do you put your gravy on?" was the puzzled question of a Southern woman.

Food economists must answer this if meats stay at present prices. For average Americans will have to learn to use meats as the Italians do, largely for the flavor. Then the something cheap to put your gravy on is necessary. Grits make an ideal "something," and moreover is a corn product and so a patriotic food.

In the far South hominy grits is a breakfast dish, a dinner dish, or a supper dish. It goes well and quickly with bacon or hash for breakfast. Sometimes a Southern child will stir into his grits a soft-boiled egg, making a complete meal. Usually it is eaten with gravy or butter.

## To Cook Hominy Grits

Wash thoroughly. Allow three cups of water to one cup of hominy. Salt water to taste. Cook in single boiler until hominy begins to thicken. Then set on back of stove or on asbestos mat and cook slowly until done. Hom-

iny needs about an hour's cooking. It burns very easily. It is much improved by beating in half a cup of milk just before dishing up. The pan in which hominy has been cooked should be put to soak in cold water at once. If hot hominy is poured into a deep dish it can be turned out when cold, cut in slices and browned under the blazer or fried like mush. Fried hominy is usually served with duck. It is also an appreciated addition for breakfast.

## Baked Hominy Grits

Cook one cup of hominy as directed above. While hot stir in one well beaten egg and enough milk to make a very thick batter, and a little bacon fat. Bake in deep dish until firmly set. Time depends on depth of dish. Serve from dish with spoon. Baked hominy, toast and bacon is a most satisfactory breakfast. It may be used as a dinner dish like a vegetable. Baked hominy is liked by all who try it.

Those who wish to try out hominy are advised not to serve it as a breakfast food with milk and sugar. It is too starchy to be satisfactory; it needs the flavor of the meat or egg. Serving it as a breakfast food will only prejudice the family against a really valuable food product.

## FASHION NOTES

Written for California Cultivator

**S**ERGE dresses are very much in evidence in the new fall clothes shown in the windows. Blacks and blues are the more popular shades, for simplicity is the keynote of all the season's styles—in keeping with our desire, and our necessity, to economize. An almost universally becoming feature of many of these serge gowns is a bias fold, about 2½ inches wide which forms the collar and is brought down to the waist in surplice effect. Something of the same idea is shown in the collars on waist 8509 and dress 8511 in the patterns illustrated this week. These are shaped collars, however.

The dress 8518 is not so very different from a glorified bungalow apron—than which no other style ever conceived has made more universal appeal. It is altogether charming in a warm wool gown with contrasting collar and cuffs of silk or satin or plain colored wool. White or buff are striking and dainty with dark dress material. The skirt of dress 8511 is not altogether new, but is very much seen in new models. It is soft and graceful in effect.

Separate skirts are generally more simple than the flamboyant "sport" skirt of the spring and summer. The model pictured in 8504 is a good example.

A new and charming dress for the small girl is illustrated in 8481. I saw recently an exquisite combination of soft brown wool with buff guimpe on a dark-haired, rosy-cheeked mite. Red or blue with white guimpe would be equally pretty and satisfactory. The guimpe for a child's dress is eminently satisfactory and always attractive. A tiny bit of embroidery on the front is an added attraction. An outline of feather stitching seems especially adapted to children's clothes.

If the letters on flour, sugar or salt sacks are sprinkled with kerosene the night before washing, a boiling in strong soapsuds is all that is necessary to entirely remove them.

In spicing pickles be careful that no one flavor predominates. Proportion them so that the result will be a perfect blend.

# The Cultivator Patterns

8509—Ladies' Waist. Cut in sizes 36 to 44 inches bust measure. The sleeves may be long or short.

8481—Girls' Empire Dress. Cut in sizes 4, 6, 8, 10 and 12 years. The dress is to be slipped on over the head.

8518—Ladies' Dress. Cut in sizes 34 to 42 inches bust measure. Long sleeves may be made with or without the deep cuffs.

7802—Ladies' Waist. Cut in sizes 36 to 44 inches bust measure. This is very good style for plain and figured material.

8495—Children's Rompers. Cut in one size, suitable for 1 and 2 years. The rompers are to be slipped on over the head.

8511—Ladies' Dress. Cut in sizes 36 to 42 inches bust measure. The dress is draped at the sides and has a four piece skirt.

8504—Ladies' Skirt. Cut in sizes 24 to 32 inches waist measure. The skirt is cut in two pieces.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH.

## HOW TO ORDER PATTERNS

Write your name and address plainly, in full, give correct number and size of each pattern you want, and send ten cents in coin or (1 or 2c) stamps for each number. In order to furnish our readers with the very latest New York City styles, all pattern orders are filled in New York City. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

# September Crop Report

Washington, D. C., September 7, 1917.—A summary of the September crop report for California and the United States, as compiled by the bureau of crop estimates:

### Corn

California: September 1 forecast, 2,550,000 bushels; production last year (December estimate), 2,048,000 bushels.

United States: September 1 forecast, 3,250,000,000 bushels; production last year (December estimate), 2,583,241,000 bushels.

### Wheat

California: September 1 forecast, 6,530,000 bushels; production last year (December estimate), 5,600,000 bushels.

United States: September 1 forecast, 669,000,000 bushels; production last year (December estimate), 639,886,000 bushels.

### Oats

California: September 1 forecast, 6,930,000 bushels; production last year (December estimate), 6,500,000 bushels.

United States: September 1 forecast, 1,530,000,000 bushels; production last year (December estimate), 1,251,992,000 bushels.

### Barley

California: September 1 forecast, 37,600,000 bushels; production last year (December estimate), 33,320,000 bushels.

United States: September 1 forecast, 204,000,000 bushels; production last year (December estimate), 180,927,000 bushels.

### Rice

California: September 1 forecast, 5,230,000 bushels; production last year (December estimate), 3,263,000 bushels.

United States: September 1 forecast, 32,200,000 bushels; production last year (December estimate), 40,702,000 bushels.

### Potatoes

California: September 1 forecast, 13,600,000 bushels; production last year (December estimate), 10,575,000 bushels.

United States: September 1 forecast, 462,000,000 bushels; production last year (December estimate), 285,437,000 bushels.

### Sweet Potatoes

California: September 1 forecast, 928,000 bushels; production last year (December estimate), 960,000 bushels.

United States: September 1 forecast, 88,200,000 bushels; production last year (December estimate), 70,955,000 bushels.

### Hay

California: Preliminary estimate, 4,630,000 tons; production last year (December estimate), 4,615,000 tons.

United States: Preliminary estimates, 92,000,000 tons; production last year (December estimate), 109,786,000 tons.

### Apples (Agricultural Crop)

California: September 1 forecast, 1,860,000 barrels of 3 bushels; production last year (December estimate), 1,918,000 barrels.

United States: September 1 forecast, 59,100,000 barrels of 3 bushels; production last year (December estimate), 67,415,000 barrels.

### Peaches

California: Estimated production

1917, 10,190,000 bushels; production last year (December estimate), 8,808,000 bushels.

United States: Estimated production 1917, 42,600,000 bushels; production last year (December estimate), 36,939,000 bushels.

### Cotton

California: August 25 forecast, 56,000 bales; production last year (Census), 43,620 bales.

United States: August 25 forecast, 12,500,000 bales; production last year (Census), 11,449,930 bales.

### Sugar Beets

California: September 1 forecast, 1,770,000 tons; production last year

Tall Enough for Shade

F. W. Waite, horticultural commissioner of Imperial County, embracing two Sudan plants. This forage crop makes heavy yields in Imperial Valley.

(December estimate), 1,463,000 tons.

United States: September 1 forecast, 7,940,000 tons; production last year (December estimate), 5,920,000 tons.

### Beans

California: September 1 forecast, 6,399,000 bushels; production last year (December estimate), 4,175,000 bushels.

United States: September 1 forecast, 20,000,000 bushels; production last year (December estimate), 8,846,000 bushels.

### Oranges

California: September 1 condition 50, compared with the ten-year average of 88.

United States: September 1 condition 49.7, compared with the ten-year average of 86.0.

### Lemons

California: September 1 condition 55, compared with the ten-year average of 88.

### Prunes

California: September 1 condition 95, compared with the six-year average of 77.

### Almonds

California: September 1 condition 65, compared with the six-year average of 75.

### Olives

California: September 1 condition 67, compared with the six-year average of 84.

### Walnuts

California: September 1 condition 80, compared with the six-year average of 83.

### Hops

California: September 1 forecast — pounds; production last year (December estimate), 22,200,000 pounds.

United States: September 1 forecast, — pounds; production last year (December estimate), 50,537,000 pounds.

### Prices

The first price given below is the average on September 1 this year and the second the average on September 1 last year.

California: Wheat, 212 and 111 cents per bushel. Corn, 175 and 100 Oats, 84 and 53. Potatoes, 150 and 122. Hay, \$15.70 and \$12.00 per ton. Cotton — and — cents per pound. Eggs, 40 and 31 cents per dozen.

United States: Wheat, 209.7 and 131.2 cents per bushel. Corn, 175.1 and 83.6 cents. Oats, 61.7 and 43.1 cents. Potatoes, 139.1 and 109.3. Hay \$13.68 and \$10.42 per ton. Cotton 23.4 and 14.6 cents per pound. Eggs 33.2 and 23.3 cents per dozen.

### CROP REPORT

Under date of September 8 the State Commission of Horticulture reports condition of the fruit crops in all counties of the state:

#### Almonds

San Joaquin and Stanislaus Counties show a condition of 100 per cent. Butte which is normally one of the heaviest producers of almonds in the state will have only 15 per cent of crop. Contra Costa, which is also heavy producer, shows a 70 per cent crop. Yolo 50 per cent, Sutter 65 per cent, Sacramento, a half crop, Riverside 25 per cent.

#### Apples

Kern, Lake, Madera, Mendocino, Napa, Riverside, Sacramento, San Benito, Santa Barbara, Santa Cruz and Sutter Counties all report a full crop. Monterey will have three-fourths of a crop, Sonoma 90 per cent.

#### Figs

There is a good crop of figs practically all over the state, Butte, Colusa, Madera, Merced and Tulare Counties showing a 100 per cent crop, while Stanislaus reporting a 110 per cent crop. Fresno County, which produces more than half the figs of the state reports a 90 per cent crop.

#### Peaches

Fresno County will have nearly normal crop of peaches. She reports a 90 per cent yield. Contra Costa, San Benito, San Bernardino, San Diego, San Joaquin, Sacramento, Colusa, Los Angeles, Merced, Napa report a 100 per cent crop; Madera 100 per cent, Fresno, which produces nearly 30 per cent of the peaches of the state, reports a 90 per cent crop. Placer County will have a 70 per cent crop. Tulare will have 95 per cent, as will Kings.

#### Pears

In pears Sacramento County, which is the largest producer in the state will have 15 per cent above normal yield. The following counties report 100 per cent: Colusa, Contra Costa, Kern, Lake, Mendocino, Nevada, San Benito, San Diego, Santa Barbara, Stanislaus, Sutter, and Yuba.

#### Plums

Plums are harvested in many of the counties. Placer, the largest producer in the state, reports a small yield only 35 per cent of normal.

#### Prunes

Three counties report yields above normal, Contra Costa and Napa 100 per cent, Tulare 105. Kern, Kings, Lake, Mendocino, Modoc, Riverside, San Benito, San Joaquin, Stanislaus, Sutter, report full crops. Santa Clara will have only three-fourths of a crop. Sonoma about the same.

#### Olives

Butte County's olive crop will be 100 per cent of normal. Los Angeles reports only a quarter crop, as do Riverside, Tehama 40 per cent; Tulare County 65; San Bernardino 50; San Diego 40; Sacramento 50 per cent. Fresno, Glenn, Merced report full crop.

#### Walnuts

Orange County will have 70 per cent of a crop, as will Los Angeles, Alameda, Colusa, Contra Costa, San Benito, Santa Barbara and Stanislaus. Counties report yield up to normal. Ventura County reports a three-fourths crop, Yolo and Riverside 100 per cent.

## The "button" tread on Fisk Tires gives you real anti-skid protection ALL ways

**ADDITIONAL SAFETY** against side slipping is supplied by a rib of rubber extending around the whole tread, on both sides. Fisk Non-Skids are the only automobile tires that furnish such complete protection.

This graphic illustration explains Fisk Non-Skid features—protection from every direction.

**Fig. 1** is the outside rib that makes an uninterrupted counter against direct side slipping or skidding—**Fig. 5** is the same protection on the other side of the tread.

**Fig. 2** is the outside row of buttons connected by a second rib of solid rubber. The buttons, which are slightly higher than the connecting rib, offer perfect resistance against skidding and because they grip the road so firmly, make the pull forward in soft ground ever so much

more positive and certain—**Fig. 4** has these identical qualities, but from the opposite directions.

**Fig. 3** is the master button around which the Fisk Non-Skid tread is constructed. It supplies resistance against slipping in any direction—no matter which way there is a tendency to skid there is always a flat resisting surface to prevent that skidding, and to assist the sure forward movement of the wheel.

**Made in three styles—**

The Grey, the Black Non-Skid and  
the handsome RED TOP,  
Tire De Luxe

Time to Retire?  
(Buy Fisk)

Buy Fisk Tires and get the real protection. Price and mileage are right. You can't buy greater dollar-for-dollar value in tire quality—and no other tire offers such safety. You can buy them everywhere.

the Cultivator Poultry Book

# Poultry for Profit

by  
Jean A. Koethen

## PACIFIC POULTRYCRAFT SAYS:

A brand new book on poultry published by that old reliable Cultivator Publishing Co., Los Angeles. The author, Jean A. Koethen, has really written a poultry book worth while. The different subjects are treated with a directness that is refreshing, after reading so many books that say so much and mean so little. The book is intended for the beginner and farmer, but we commend it most heartily to anyone interested in poultry; whether for pleasure or profit; it is full of good things from cover to cover.

## THE LOS ANGELES TIMES SAYS:

The author of this manual has covered the subject fully, giving the salient features and practices of an enlightened poultry culture as it applies to California conditions, based largely on personal experiences, and intelligent compilations from recognized authorities.

## THE RIVERSIDE PRESS SAYS:

The Press is in receipt of a copy of this work, called "Poultry for Profit," and has no hesitation in commending it to either the "backlotter" who keeps a few chicks for his own pleasure, to the fancier who works to the "standard," and to the commercial poultryman who makes a business of poultry culture. Before its publication, the manuscript of "Poultry for Profit" was submitted to practical poultrymen, to experts and simple poultry enthusiasts, and all agreed that it was more comprehensive, more readable and vastly more helpful than any similar poultry book yet published. It covers the widest range, discussing breeds, feeds, diseases, housing, marketing and answers the thousand and one questions that even the expert poultryman sometimes has to ask and the amateur is ever asking.

## THE PORTLAND OREGONIAN SAYS:

The Weekly Oregonian takes pleasure in recommending this book to its readers, for it is "the right stuff," told in the right way by the right woman.

## "Poultry for Profit"

Gives more practical knowledge of every branch of the poultry business in a more concise and simple manner than any similar book published. With the knowledge gained by a study of this work experience in the poultry business is not as necessary. Through its guidance obstacles are overcome before it is too late.

## An outline of its valuable information—

Making a Beginning	Housing and Yarding	Incubation
Brooding	Feeding	Breeding
Marketing	Sanitation and Hygiene	Fixtures, Conveniences
Diseases and Vices	Ducks and Geese	Turkeys

The book is 5½x8 inches and contains 12 chapters, with over 225 pages of text and 18 pages of illustrations, printed on eggshell book, binding full cloth vellum de luxe, at the price of one dollar postpaid.

\$1.00 Postpaid to any address.

\$1.75 with the California Cultivator, weekly, one year.

**The Cultivator Publishing Co., Inc.**

115-117 N. Broadway

Los Angeles, Cal.

## Five Years After

Five years ago these two orchards were planted. At that time there was no difference between them—except that the trees on the left were planted in holes blasted with Hercules Dynamite while the trees on the right were planted in holes dug with a spade.

And today—what a difference. The orchard planted with the aid of Hercules Dynamite is producing a full crop of splendid fruit—its second crop by the way. The other are bearing for the first time and producing inferior fruit at that. It pays to plant

## HERCULES DYNAMITE

The difference between the growth and yield of a tree planted in a dynamited hole and one planted in a spade dug hole is almost unbelievable.

During the first year alone the development of the former will be almost twice that of the latter. When the trees begin to bear, the yield of the one which has received the benefits of dynamite is much greater than that of the other. Its fruit is larger and of a better flavor.

Whenever you plant trees always use Hercules Dynamite.

Write today for the 64 page book, "Progressive Cultivation". It tells how to plant trees with Hercules Dynamite, also many other uses for dynamite on the farm. It is sent free on request. The coupon below is ready for your name and address.

XLIX No. 12

LOS ANGELES: September 22, 1917

One Dollar Yearly

## State Fair Crowds Exceed Former Years

Almost Every Day Gets Record Attendance. Partial List of Awards. Items of Interest from Stock, Machinery and Implement and Horticultural Exhibits

Prize winners, champions, on the cover page and on other pages are only a few of the fine exhibits. Our pages are not extensive enough to admit every prize winner. Dozens of others have been photographed and will find place in later issues. Those shown on cover are: Upper left, a champion Holstein exhibited by the Bridgford Company. Middle picture on left shows B. E. Nixon holding senior and grand champion Guernsey bull, Ricardo of Edgemoor. Upper right picture is Hopland Lass, senior and grand champion Shorthorn of Hopland Stock Farm. Middle: right, Lady Tintinger, junior and reserve grand champion heifer calf exhibited by J. A. Bunting. The large Yorkshire in lower left corner is Riverina Paddie, first aged boar of A. D. McCarty. The Poland-China at lower right is King's Rosebud, grand champion sow of Wm. Bernstein.

ed thousands filled the enclosure and even the race track. That day called for the use of trucks to haul off the gate money, for people came to be thrilled by the instant destruction of that which took great ability and months to construct.

Notwithstanding, all folks do not go because of the thrills and the side shows. Many a careful observer took from Sacramento last Saturday night information which will mean much to himself and to the state.

Amongst the livestock judges were

judge hesitate long before the blue was placed.

The livestock notes by livestock contributors and the awards which are published, so far as they could be secured and space could be given, are best proofs of merit.

I will take a few moments in the horticultural "building." The main building on the grounds, the old horticultural building, was burned during the last year's fair. But in its place a number of tents and frame structures covered approximately the same space. The outward appearance of

Dairy Prize Winners

top to bottom: Argie's Prince 1st prize junior yearling Guernsey, A. J. Welch. King Segis Al-Prilly 192705, 1st senior yearling grand champion Holstein bull, and Co. Jolly Senator Raleigh junior and reserve grand champion Guernsey bull, J. B. and J. E. Thorp. Beauties at the state fair.

Every one a Blue Ribbon Winner

A string of drafters from stables of Easton and Ward.

Pigs as is Pigs

From top to bottom: Duroc-Jersey, 1st senior and grand champion boar, J. M. DeVilbiss. Duroc-Jersey, King's Lady 3rd, junior and reserve grand champion sow, F. M. Johnson. Berkshire, 1st in junior pig class and reserve junior champion, H. J. Hammond. Poland-China, reserve grand champion boar, Rosebud's Chief, W. Bernstein.

SO FOLKS go to fairs to see exhibits, inventions and the finest in livestock and field productions that inspiration may be had for their own and better performance, or they go to "Hello, Bill," see the shows, the collision and to chew Ask the gate keepers at the California State Fair. They will tell of easy jobs on Tuesday, Wednesday and Thursday of fair week. Day was governor's day when more than a million dollars of California's finest (and the world's finest) stock passed in review before the fair and other Californians gathered. They will also tell of a different story of Friday when locomotives crashed head on in the middle of grandstands massed with thousands of beings, while other unnumber-

many from Eastern states, and every one with whom I came in contact and questioned as to the quality which California was showing at the fair expressed unqualified surprise at the showing made. Some were there for their first visit and they had been given something of an inkling of California's abilities in her performances at the last International. Still in all classes, from poultry and sheep and hogs, through the dairy and beef classes to horses, there were examples of exceptionally fine breeding. In every class were animals or exhibits not strictly top-notchers, yet it was no uncommon sight to see the

this conglomeration was not imposing, as was shown by the illustration in last week's issue, but the character of the exhibits was fully up to that of former years. We believe still greater advance might be shown in these horticultural exhibits.

California is the greatest in horticulture of any state of the Union. We wish we might see a strictly high quality, commercial fruit exhibit. California's exhibits have always taken on more the appearance of the promotion or land sales departments of chambers of commerce or similar bodies. This is not said with the idea of discrediting in any way such ex-

hibitions. At Eastern expositions or in the larger commercial centers such exhibits are entirely in order and have made known the productive possibilities of this great state, but in the state fair a strictly quality exhibit of fruits of standardized packs, with contests between various associations or packing concerns, would prove of real value to producers and shippers.

The horticultural building was not entirely devoid of commercial packs or of the plate exhibits of fruits. There were some most excellent exhibits but these were not given prominence. It is true such exhibits may not prove so attractive to the casual visitor at the fair as the featured exhibits of commercial bodies.

Continued on Page 302

The beef classes were largest and filled with higher quality than ever at California State Fair.

left: First prize aged Shorthorn herd, T. T. Miller; second from left: Lady Berendo C. C. 339463, senior and grand champion Hereford cow, D. O. Lively; Bertram 1st, junior and grand champion Hereford bull, H. H. Gable; White Mayflower 552668, first prize senior and reserve grand champion Shorthorn cow, T. T. Miller.

## The Titan Tractor Record

**A** TITAN tractor is a safe machine to buy. The present models have been at work steadily on average American farms for more than two years. Their standing is established.

Ninety-six per cent of Titan owners say they are perfectly satisfied with the amount and quality of work the machines do, and with their fuel economy.

Every Titan tractor operates successfully on kerosene. You can always get a plentiful supply of kerosene or distillate, at a reasonable price.

There are two sizes—10-20 and 15-30 H. P. The 10-20 size is the one recommended for average farms. It is a three-plow outfit with two plowing speeds, 1.85 and 2.50 miles per hour, turning from 7 to 10 acres a day. You can use it for all kinds of belt work up to 20 H. P. and for hauling.

Both sizes give the same steady, reliable service. Both operate successfully on kerosene. They reduce labor costs. By getting the work done in the right way and at the right time, they increase yields.

A Titan tractor is a safe, profitable machine to buy. To have a Titan tractor delivered in time for the harvest and the fall plowing, your order should be placed soon. Write us for catalogues.

## More Careful Picking

CONTINUAL source of loss to all fruit shippers is careless picking, careless hauling, careless handling, careless packing—carelessness generally. Stop it! has been the cry for a score of years, yet we continue to be careless.

P. J. Dreher says in his last report to San Antonio Exchange:

### Decay

As each year passes it becomes more difficult to place to advantage cars showing decay. The best trade will not handle decayed cars at all. Buyers who purchase decayed cars demand heavy reduction in price and even then it is only the cheaper class of trade which will take a chance on decayed fruit. In the majority of cases cars arriving in the Eastern market showing decay cannot be sold at original destination, dealers having neither the time nor the facilities for repacking. This means diversion, longer time enroute, delay and more decay with its resulting loss. The best trade demand good sound fruit and are willing to pay the price for the assurance of good keeping quality in any brand.

In order to secure and hold special customers for your brands and have them take cars which they order, the fruit not only must arrive in sound condition but must hold up long enough to allow of its sale and distribution to the trade and consumer. To do that every care must be used at this end in the handling of the fruit from the tree to the car; any reasonable expense which insures better keeping quality is an investment

which means greater returns to the grower.

The matter of decay has been uppermost in our minds and carefully brought before you. In our report made 16 years ago we said:

"Fruit should be handled in a careful manner as eggs. Careful handling and long stems are a source of most of your losses on account of decay. I have for years advised that picking gangs be employed under competent foremen to your crops."

In each of our reports since that date we have referred to the matter of Picking and Handling

This matter has been uppermost in our minds since the organization of this exchange. In our report 16 years ago we called attention to the point and in our report of 1900 said:

"Next comes the matter of picking fruit as to size; taking the past season as a guide, there was an average of 50 cents per box between 96 126s and 176s to 200s in favor of larger sizes for the first three months of the season while during the two months it was not the case. During the first period small off sizes were not wanted and discounted at 12 cents to \$1.00 per box, while 126s were neglected and in cases discounted."

Not only was this true then but has always been true and is true now. Small off sizes brought a large premium at the end of the season.

Contract work for pickers is the best and should not be resorted to.

## Pickling Olives

By Paul H. Steude

THE following directions for home pickling of olives were recently given by Paul H. Steude in the Yolo Democrat. He says:

"This recipe is one of my own invention. I have pickled tons of olives, which sell and taste much better than the commercial article. I usually use a sugar, vinegar, cider or glucose barrel as olives absorb all foreign flavors from barrels where whisky, brandy or red wine has been.

"I take an auger and bore a hole in one end of bottom of the barrel. Then make a long 10-inch point on a broom handle, with which to close the hole. By tapping on the broom handle you can have the lye or water drawn off without getting your hands wet, or letting the olives drop out of the hole.

"Olives should be cherry color for pickling. In this way they have a good flavor and are appetizing. I consider the Mission olive the best for home use. It is best not to mix the olives from different trees as some trees have more bitter fruits than others. This accounts for having some bitter olives among the sweet usually found in Yolo and Sacramento Counties.

"When you pick olives get them into clear water as soon as possible. Never use ditch or dirty water as olives absorb the mud and are easily spoiled. Neither use well nor filtered water. Olives picked into lug boxes will mold in 24 hours.

"Add 1 pound concentrated lye and 1 pound pure salt. Dissolve in 2½ to 3 gallons of water, and see that it is

thoroughly dissolved, then skim, cook it, then skim. Then drain the water from olives and tighten broom handle and pour the preparation of salt and lye over them. Weigh the olives down so as to keep covered. In this way in 12 hours the bitter will be entirely moved from them. In leaving in I draw off the preparation and in on top again about once or twice a day to find out if the bitter taste is out of them. If you see milk on by cutting them open you find bitter still.

"You can take a few olives, place in clear water and wash off and bite them, being sure not to touch your lips near them, and spit once and rinse your mouth with water. As soon as the bitter taste is out of the olives turn in clear water. The first few days change four or five times a day, and two to three times a day for about ten days or till the vestige of the lye is gone.

"Should they get a little soft, make a strong salt brine and place them for 24 hours and then wash in clear water. I usually have olives eat in one week from the time they are picked, but there is still a little lye in them.

"To keep the olives a long time, make a preparation of 12 ounces of brine to a gallon, or one that will float a potato. Olives should be kept in a dark place covered with brine or oil. In keeping them a long time the scum should rise to the top and should be skimmed off, and the olives rinsed in clear water and put in brine. If olives are too salty, place them in water for a few hours and they will be ready to eat.

"This preparation is strong enough to take the color out of the olives. They will not look as well as the commercial but are far superior in taste."

## Potash or Powder?

Written for California Cultivator By J. R. Mattern

THE expression that "tillage is manure" is an old one now, familiar to nearly everyone. There seems to be no doubt of its essential truth. But when we seldom see an analysis of what the words mean, or what "tillage is manure" really implies. Tillage means anything at all in connection it means plant food, as we get in common stable manure or in commercial fertilizers, or we find in the rich virgin soils have not been run down. In other words, it means nitrogen and phosphorus and potash, especially potash at the present time, when the manure and sulphate that we have been relying so much on all these years cost 75 cents a pound, is a little dear for fertilizers. For tillage, its meaning should be hard to establish clearly. Tillage means to work the soil, stir it, mix it and turn it over. There is the work of smoothing harrows, light weeders. This is tillage on the surface. A spring tooth harrow deeper, and a disc or cutaway deeper. When we plow we till the soil, and when we hitch behind a subsoiler we still are trying to secure the same thing, tillage. Live tillage is merely tillage applied thoroughly, and often it is tillage that mixes the soil somewhat to the extent that mortar or concrete is mixed, and that goes deep. Experience has shown that there

must be much latent or dead plant food, including potash, in nearly all soil, for after the soil is stirred up and worked well, and the first plants made to grow in it, "it gets richer" of itself. The solution lies in the fact that the tillage makes available a lot of this dead plant food and therefore that there is a supply of potash right in the soil which every farmer can get by applying the right methods.

Deep plowing and subsoiling are the forms of tillage which are the most productive of results in the securing of fertility. The top soil in a way has become burned out or its plant food used up, but this is not true of the subsoil. The use of heavy engines with deep tillage machines behind has proved to be very effective in raising crop yields. The blasting of soil is another way to secure the required tillage to free the potash and other plant food elements, and since it does not require expensive equipment the practice can be made use of by nearly everyone. Blasting seems to do the work more thoroughly than machines too. When properly done it grinds the soil up like chop feed.

But whatever the method of securing it there is little doubt that through intensive tillage many farmers can get a sufficient potash supply for their crops out of their own soil. The phrase should be changed during the war. It now should read "Tillage is potash."

## Sensible Fertilizing This Year

Written for California Cultivator

SINCE all the fertilizers on the market contain little potash, on account of the war, it seems necessary to go back to the application of phosphorus alone, as the practice is to be. But when this conclusion is reached a little reflection on the general subject of soil fertility cause a further and more radical change in the plans.

That the general practice has been in the past few years has been to apply as nearly as possible a complete fertilizer for the soil and crop intended. It now becomes necessary to go along without the application of the element of plant food—potash. The lack will break up the chain and will result in the plants suffering for the lack of it almost as much as they would suffer from the lack of three of the chief plant foods if one at all were given—provided there is no other source of potash.

There is another source of potash. This is in the soil itself. In the ordinary course of farming some of the potash, which at present is in the soil in an unavailable condition will be rendered free. And there is no reason to think that phosphorus in the soil also will not be released by the same treatment and at the same time. Nitrogen, we know, is not present in the soil unless it is there from the air by some means other. Some soils lack in phosphorus, it is said, but this lack is easily supplied with material that is cheap in the United States now. What is needed now, more than potash, is soil treatment that will release the potash and the phosphorus that are in the soil already,

but locked up. The logical thing then is to give the soil the most intensive tillage possible and go down deeper by far than ever before. If possible the soil should be blasted. The blasting breaks the soil about as well as 50 plowings and does it three or four feet down.

Then follow the intensive tillage by cover crops of some legume, crimson or red clover, cow peas, vetch or soy beans, anything in the way of a nitrogen catching plant that will at the same time fill the soil with organic matter. If there is a lack of phosphorus in the soil it should be supplied by the application of raw ground phosphorus rock. The strength of acid rock and other quick phosphorus sources leaches away too quickly. Very likely the clover or other legume will not grow well without liming of the soil, and it is certain that the lime will help to release both potash and phosphorus. Therefore what is needed is farm powder, raw ground rock, and lime, plus clover seed.

### COST OF AN APPLE

As the result of a detailed study of 54 bearing orchards in the Hood River Valley of Oregon, it was found that the total cost of apple production for the 54 bearing orchards averaged \$1.02 per box and \$222.32 per acre under mulch crops. The average cost per box exclusive of interest on orchard land investment was 66.4 cents. Net labor costs averaged 38.3 cents per box. Material and fixed costs constituted 62.5 per cent of the total cost. The trees in the orchards studied averaged 12 years of age and 72 trees to the acre. The average total investment per acre of apple orchard was \$990.74; the average yield, 222 boxes per acre.

## Plant Bulbs Now

Written for California Cultivator By E. Branton

OCTOBER is the month that heralds the autumnal planting season. All those who garden should prepare to garden now. Tear up the soil deeply, fertilize freely, and pulverize finely. You are then ready to begin operations, either of sowing, planting, or transplanting.

First, in alphabetical order comes the amaryllis, A. minor and A. major; they are both A. belladonna or known to many as the belladonna lily. In England they are planted six inches deep. We are generally advised here to plant them more shallow, but this season I had some that were buried under a pile of heavy soil to a depth of 18 inches and proved to be the best in the garden. If soil is light plant them as deep as you like. This will also hold good for the giant flowers usually called amaryllis which are really hippeastrums. In heavy soil, however, the latter should be put down so that the top of neck of bulb is even with the soil surface.

Anemones of the bulbous type are best left for planting until November. By the way, do not accent this name on the first e as the French do. The correct English and also the Latin is pronounced similar to the still more common word alimony, which has the same number of syllables. Accent the i in alimony and note how queer it sounds, for I do not like alimony. Anemones of the herbaceous or Japanese type are still finer for the garden than the bulbous type, but the Japanese need a shaded spot and the bulbous type should be planted in full sun. Soak the bulbs in warm water for two or three hours before planting. They will swell up and enable you to distinguish the crown or top side from the smooth or bottom side—they have no roots attached. Cover two inches deep.

Callas of the common white may now be put in soil and if the latter be light and warm and the drainage good, the yellow calla and others may be put in, but I lose many in fall planting if the season proves cold and wet, so I "play safe" and plant in March.

Cyclamen are a seasonal bulb, and should be planted in partial or full shade. The soil for these should be fine, light, and retentive of moisture for cyclamen need a steady supply of soil moisture but will perish quickly if kept too wet. The new types are superb, with waxy, orchid-like flowers in a fine range of colors. Do not cover the bulbs with soil.

Now come the glorious daffodils, jonquils, or narcissus, all of them worthy of the best place in the garden. None of them are worthless, none of them poor, though some varieties are better than others. Buy no double sorts unless it be Orange Phoenix; the singles are best. Plant the bulbs five or six inches deep and after tops are up mulch with rotten manure. This mulch prevents weeds from growing, feeds the bulbs, keeps the soil cool and renders cultivation unnecessary.

Freesias should be planted first of all fall bulbs except Watsonias and should go in at once. Plant them two inches deep, in any old place in any old soil, for they always flower well. There are colored varieties now to be had, of which the lavender is perhaps best.

The dwarf gladiolus are also for present planting and by many are pre-

ferred to the big, summer-flowering type. The Bride, Blushing Bride, and Peach Blossom are the leading varieties. Plant these well down, four or five inches below the surface. The best luck I have had with them was in a rich sandy soil, more than six inches below ground, and I grow many very fine ones each year. All gladiolus bulbs may be safely planted now and will thrive as well as if left until January. The latter month is late enough for the main crop, for early planting brings best average results.

Hyacinths may now go in the garden, pot, or glass, but as I do not care for these thick, heavy, ungraceful spikes of color I make no comment beyond advising the Romans in limited number for garden planting.

Iris of all kinds are recommended and I hope you will plant many of them, of all types but the Japanese. Plant as for dwarf gladiolus for the Spanish and English types and more shallow for the Germanica type. Ixias are also in season as are the nearly-related sparaxis, both grass-like plants with fine flowers.

There are a few lilies now to be had and they are best planted at once as the bulbs deteriorate in vitality if left long out of the soil. I would plant all six inches deep and would surely put a large handful of clean sand for the bulb to rest on and a like quantity on top of the bulb. If the garden soil is sandy or very light this treatment may not be necessary.

Tulips must have sandy soil or, better still, sand and leaf mold. It should be deep and of fine drainage; rich but not with fresh manure. Plant bulbs not less than six inches deep and keep well watered at all times.

French buttercups or ranunculus are among the best of bulbs and require the same treatment as anemones. Watsonias should go in soil first. Plant deep in any kind of soil and feed well.

### Seeds for Cut Flowers

Calendulas will furnish cut flowers when nearly all else is "frozen up." For that reason grow plenty of them. You can't prevent them from blooming well if you give them water. They come only in lemon and orange shades and both should be obtained in named varieties for results will be much better than from the nondescript shades in mixed seeds. Scabious is another good cut flower and snapdragons still better. Many are planting Canterbury bells. I do not grow them as I do not like the tumble down plants, but the flowers are fine. Stocks are a splendid reliance in the flower garden and should be freely sown or planted now or planted at any time in the

### STATE FAIR

Continued from Page 299

#### Some of the Features

Alameda as usual took the large space and made one of the most impressive exhibits of her fruits and agricultural productions. She made an exceptionally fine showing of corn and of Indian corn.

The Northern California Counties Association, with Tehama and Butte County, took up the central portion of the larger tent space. Fresno, of course with grapes and raisins predominating, took smaller space than in former years but had a most attractive exhibit. Colusa with wheat given a prominent place, Sutter with her peaches and other fruits, and San Joaquin with special prominence given to products of the Sperry people with her onions, milo and nuts, and Sacramento, a photograph of whose exhibit appeared in last issue, all had most attractive booths.

In the annex adjoining the main horticultural tent there were educational exhibits from schools of the Sacramento and San Joaquin Valley. In all of these agriculture was given a most prominent place, one school not only appearing with the productions of its gardens but with a complete poultry yard stocked ready for practical work.

Another feature not in the horticultural building, yet essentially horticultural, was one representing the entire state of California. It was entered by the permanent state exposition located in the city of Los Angeles. Mr. Davison, the manager, conceived the idea of a portable temporary building, constructed entirely in Los Angeles in sections and put together with bolts or pins, which could later be taken down and transported to the fair grounds in Sacramento. The building was filled with products of all sections of California and was one of the most attractive on the grounds.

The University of California made many exhibits, that is, its animal husbandry department made especially strong exhibit of horses, cattle, sheep and hogs. This was featured and nicely decorated, but none of the animals were entered in the competition for premiums. This is supposed to be in response to the appeal of the livestock people for opportunity to win premiums without having to compete with a great institution which has unlimited capital to bring in the finest of the earth. The university has shown itself patriotic and far-sighted as to the state's welfare by introducing the finest stock which could be procured. It has been an inspiration to livestock producers. We believe this sufficient reward, at

herdsmen and others connected intimately with the stock may be disappointed in not being able to carry off blue ribbons were the spirit of fairness shown is appreciated in a way which will be more for the university than for the matter of winning blue or red ribbons.

Across the street from the exhibits of livestock was the exhibit of the University of Agriculture. It was surrounded with a picket fence of Indian

a machinery building was devoid of the noise and splash of the former years but one interesting exhibit there which did attract attentionists continually was that of the Keller-Thomson Company showing many forms of gates and valves, small centrifugal lifting water pumps, the big pool and distributing in the field, demonstrating its several methods in actual work.

## Legal Queries

Mr. B. Stanton, attorney, 243 Wilcox Street, Los Angeles, will answer legal queries in this department. Immediate mail replies cannot be given where fee to Mr. Stanton is paid. Replies are wished in Cultivator as query to 115 1/2 N. Broadway, Los Angeles.

### Line Right of Way

In the water commission give me permanent use of water now going to waste upon patented land? I pipe this water across adjoining patented land without the owner's consent? If he refuses to consent can I get a right of way?—Subscriber, Mail.

On a proper application made to the state water commission and appropriation made of the waste water can very probably obtain the use of the water so long as you place same to beneficial use. Upon the facts stated, however, we fail to see how you can take another man's land for a right of way without giving him compensation. If you were to undertake the business of supplying such water to the public or to any neighbor or community the right of eminent domain would then be conferred under which such right of way could be conferred.

### Contract with Commission Merchant

Could fruit shipped to a commission merchant daily on a guaranteed price, f. o. b. point of shipment be considered a sale? Upon the arrival at destination if some of the shipments are found to be too ripe, according to the consignee whose statement is that the temperature is 112 degrees, is the consignee justified in charging commission and deducting express charges on selling fruit at less than guaranteed price?—Subscriber, Soquel.

When stating that the fruit was shipped on a guaranteed price you placed an interpretation upon the contract beyond which the writer cannot go in the absence of the contract and in that interpretation you have answered your whole question. The commission merchant has merely guaranteed to you that for merchantable fruit you will obtain a purchaser in the open market who will pay the guaranteed price in addition to freight, cartage, handling, and commission. There has been no sale made, therefore, until the merchant is a buyer for you and, consequently, you assume all risk of loss and expense and expenses. If you can show that the fruit was merchantable at arrival at destination you can take action against the commission merchant upon the guarantee, if it is merchantable when shipped and loss occurred through delay of the carrier, place your claim with the carrier. It would be entirely within the authority of the commission merchant acting as your factor upon the arrival of overripe fruit to sell same for the best price obtainable and charge back to you all expenses and commission if it left a red ink figure for you. The excuse made to you of overripe fruit is a favorite one of a certain class of men in this line of business and is, under the form of contract which you have probably made, almost impossible to disprove by the farmer located many miles away attempting to ascertain the true facts weeks or months after the fruit has been disposed of.

## Fair Dates

Fresno District Fair, Fresno, September 25-29.

Napa County Fair, September 22-26.

Glenn County, Orland, September 26-30.

Antelope Valley Fair, Lancaster, September 26-29.

### Ditch

The land of A is between the land of B and the irrigating canal. B has permission to take water from the canal, but in order to get it must make a ditch along the boundary of the land of A. A has not responded to the request of B for such right of way. What can B do?—Subscriber, Angilola.

It would be well for B to first make a careful examination of the charter and by-laws of the irrigation district or company owning the canal, also of the title under which A holds his property. It is frequently the case that the right is given or reserved to the concern supplying water to cross the lands of those within its territory in order to supply landowners desiring water who are remote from the ditch. It is also frequently the case that the right is reserved in the deeds of the landowners to cross their lands with ditches in order to serve others with water.

### Lease for Second Year

A leases land to B for one year. At the end of the year A leases the land to another party without notifying B. Has B any claim upon the land for the year following, no notification having been given him to quit at the end of the year?—Subscriber, Oceanside.

B has absolutely no claim. He was well aware of the term of his lease and must get out when his contract is ended without notice other than the three day notice necessary in order that the landlord may obtain treble rents under the unlawful detainer act if B remains beyond the term of his lease.

## -what ranchers say about-

Hairy Peruvian Alfalfa was thoroughly tested out all over the state, and the entire Southwest, last year—and it HAS MADE GOOD!

It is the HEAVIEST PRODUCER known—and it is bound to displace all other varieties. It grows vigorously in all climates—does well at 5000 feet or at sea level.

Hairy Peruvian Alfalfa produces a great mass of leaves from the top to the crown of the plant, and as the leaves contain the greatest amount of food value, this type of alfalfa gives the farmer the greatest yield.

## The Tractor Section

Written for California Cultivator  
By M. C. Holman

**U**NDER the auspices of the California Tractor and Implement Association the largest exhibition of tractors ever held was in the big tractor tent on fair grounds.

Heretofore tractors have given demonstrations on ground that was unsuitable for plowing at this season and the tractor was at a decided disadvantage. At the 1917 fair there was a "dead" exhibit, which proved to be from dead if we may judge from hundreds of spectators who were interestedly watching the various demonstrations. These demonstrations consisted of an analysis of the relative working and a study of the strength supporting the main weight.

A "dead" exhibit is far more beneficial to the manufacturer as it offers a chance to bring to bear certain merit points possessed by his tractor, and better for the buyer to be able to make comparisons as the machines side by side, than to follow them furrowed fields through clouds of dust. Gathered in the tractor tent were separate exhibits from the small Bear, the mammoth Holt. One finds much interest in observing the steel horses they stand ready to pull on the draw or tug at the belt. Each one represents the potential energy of a relative number of horses. Under normal conditions the rated power can be expected for the manufacturers have been servative to a remarkable degree. They have underrated their machines to every opportunity for the doubt to be eliminated.

That there is a tremendous interest taken in tractors was shown by the crowds of inquisitive spectators, a point particularly noted was the interest of women. But when we realize that women are running many of the ranches of the state we can readily understand their need for an acquaintance with tractors.

To enumerate all of the 22 exhibits would be to tax our space too heavily. Some are worthy of special note.

The Yuba exhibit showed two sizes of the Ball Tread—the 12-20 and the 24-30. These tractors are easy to operate, powerful enough for the plow, light enough for the harrow and cheap enough for pocketbook. They are simple and compact, giving the greatest possible power for the size, weight and consumption of fuel.

The Holt display covered not only tractors, but also the combined harvester, the mammoth land leveler. The Holt is the one tractor for extra hard work with continuous endurance. We have seen it used in moving houses, the work was done with surprising ease and swiftness.

The combined harvester presents a massive appearance when "at ease" serves a wonderful purpose by turning the growing grain into sacks of grain ready for market.

The Samson Sledge Grip tractor, with its clod smasher wheels, its over size over strength parts, its automatic control and its low price has a commanding place in the eye of the purchaser. The Samson is the tractor for the medium size farm. Its substantial construction, of the best possible steel, makes it particularly desirable when one is considering ease of running, freedom from breaks and accessibility of the various working parts.

The new and improved Bean tractor places on the market a small, serviceable machine that has been given an acid test. It is the result of a study and extensive experimenting. The first model gave general satisfaction, the new one bids fair to outdistance in popularity.

Another new model, shown for the first time, is the Joshua Hendy "Invincible." It is true to name for it embodies the principles of tractor construction that make it truly invincible. Size, weight, power and price are all in its favor. We are surprised to learn that the Joshua Hendy Company is working three shifts to get the tractor on the market in sufficient quantity to meet the present demand.

The big kerosene-burning Sandusky 15-35 is a tractor of no small calibre. It represents a maximum of efficiency and economy on the farm. It may be used for pulling heavy loads, whether in the soil or traction work, and is readily adaptable to working a three-point machine. It will handle a constant pound drawbar pull.

The Moline Universal will pull a usual five horse load and will do as much work as seven horses. It requires less space and less care than one horse and is a two-wheel tractor to which implements are fitted. For plowing, one may be run in the furrow making the tractor practically self steering.

The Case 9-18 finds a place between the large and small tractors. It is of a size and strength, gives a liberal pull and may be run by the novice.

The Cleveland tractor, while new to the Coast, has been used extensively in the East. It is a comparatively light machine, but the main weight is used for power making. It will be a prime favorite for the man who wants a machine of medium frame backed by ample power.

A tractor, no matter what size, cost, make, no matter how well built, requires careful handling. Parts will break. Care will prevent much of this trouble. Weather is a great destroyer. A rain proof tractor garage will prove worth many times over and greatly prolong the life of your tractor. You should have this protection the moment your tractor arrives. Give your machine attention and consideration. It deserves it and it will give you a good return on your investment.

The Waterloo Boy exhibited by the Coast agents, W. L. Cleveland Company, created much live interest. The Waterloo is put up either as a three-wheel

Some Tractor Exhibits

The California Tractor and Implement Association provided their own tent. The tractors shown above in order from top to bottom are, Sandusky, manufactured by Dauch Manufacturing Company; Bean, Bean Spray Pump Company; Holt, Holt Manufacturing Company; Moline Universal, a two-wheeler, Moline Plow Company; Waterloo Boy, W. L. Cleveland Company; Yuba, Yuba Construction Company.

In the Tractor and Implement Tent

The gang at the top is not a fanciful model but an actual working gang of 16 plows. It takes power to move it but it turns the dirt. The Case tractor is shown in the middle illustration, while at the bottom is the Invincible, manufactured by the Joshua Hendy Iron Works.

## Your Most Valuable By-Product

This year of all years you can't afford to waste manure—your crop needs it. Save every bit. By spreading it evenly in a wide sheet and making one ton produce better results than two tons spread by hand; doing the work in one-fourth the time and without back straining labor—you can soon pay for

## The Flying Dutchman Wide-Spread Spreader

Striking advantages are built into this spreader which commend it to farmers above all other spreaders.

Double Beater pulverizes manure thoroughly. Second beater running at high speed makes a wide, even spread—covers the field in less time—makes the load go farther and produces better crop results.

Separate Direct Axle Drive for beater and apron eliminates overstrain on beater mechanism—prevents breakage.

Low down—only 42 inches from

ground to top of box at rear—makes it easy to load.

Wide range of adjustment permits spreading thin coat or heavy layer. Reserve speed moves apron at rate of 40 loads to the acre, for clearing out the bed. One lever controls operation.

Exceptionally light draft under heavy load—easily carries 4500 pounds.

Built almost entirely of steel—nothing to warp, sag or rot.

The Flying Dutchman pays for itself in one season's work. Ask your Moline Dealer about it, or write us for Illustrated Literature.

For Over 50 Years The Mark of Good Implements

## Big Yields—Less Labor

To reap the greatest return at harvest time, cultivate thoroughly before planting. This is the vital time for all crops. With small grains it is the only cultivation. To do it with less labor requires the

## Cutaway Double Action Disk Harrow

It is saving a team and a man for thousands of farmers right now—and once over does the work! Its light draft is noted. Equally good on stubble. The rigid main frame forces every disk to its work; double cuts, pulverizes and levels the ground. Disks are forged sharp; dust-proof oil-soaked bearings—perfect service and long wear.

Write for our helpful freebook "The Soil and Its Tillage," and new catalog; also for name of nearest dealer selling CUTAWAY (CLARK) Implements.

## Some Commercial Features

Written for California Cultivator  
By M. C. Holman

WE WOULD lose an opportunity to tell a big story if we failed to tell of the commercial side of the fair—but we're not going to lose it.

Commercialism finds a field of activity at a big state fair, for it discovers ready ears and eager eyes. The most massive agriculturists find their way, possible, to the fair, for they expect a display of those implements and things which come close to their everyday lives. They see new and better ways of doing old things and discover ways of doing what was before thought impossible. And it is for this advancement and progress that the wide awake ones

state fair would be complete if it were to show what progress had been made during the past 12 months, and the California State Fair of 1917 holds a high place in its presentation of commercial achievement.

Enumerate all of the pleasing displays would be to fill a ponderous volume, but pointing out carefully arranged displays may lead to a fuller realization of what California has done in the line of commercial helps.

In the dairy section one could not fail to see the large and complete display of the De Laval Dairy Supply Company. Occupying a space of 1280 square feet the line of dairy utilities was shown in a most effective operation. Here was action—action that makes for better dairymen and more money for the dairyman. Their products numbered 25 of various sizes and capacities, fitted for hand and power operation. A large Alpha engine was driving a pump that was throwing a high stream of water with tremendous force.

The Ideal Green Feed Silo, in miniature, took a prominent place in the display, and also various sizes of Alpha engine feed cutters and a complete line of equipment. In the new Brooks Cement Stave Silo, which rears its head majestically in the center of the fair grounds, this silo is made of tongue and groove cement slabs one foot wide and two feet long. They are cemented together and held fast by bands of galvanized iron one quarter of an inch thick three inches wide. The inside is lined with a thick coating of cement. Special attention was given the giant made by the Oliver Chilled Plow Co. It combined a string of at least separate plows and is one of the largest combinations ever made.

In its place in the tractor tent was the did display of the Standard Oil Company. It embraced every kind of oil and was used in tractor work, showing all grades of oils and the different uses of refining. Educationally this is an important exhibit, for a large number of tractor success lies in the use of the proper kind of fuel and lubricants.

A particular feature of special interest is the sub-soil plow, made by the Killefer Manufacturing Company. For many years the University of California recommended this sub-surface plowing and one can see the practical benefits to be derived from its use.

A new and improved nozzle attached to the Bean Sprayer delivered a continuous mist under a pressure of 265 pounds. It means less destruction to trees and shrubs by its use, and many will find their way into the orchards of California. A new tile silo, manufactured by the On-Phillips Company bids fair to be extremely popular. It is made of concrete blocks about one foot square and is so constructed that it will not allow the contents to be affected by any kind of weather conditions. A great land leveler and almond huller—the Schmelser Manufacturing Company's machines worthy of special mention. The land leveler is to be used on a large tractor and is capable of leveling several acres per day. The almond huller means more and better almonds. It is all but human, working with steady precision and delivering the almonds shelled, packed and ready for market.

An intensely educational display was shown by the Western Soil Bacteria Company. Two microscopes were used to show the tiny living bacterial organisms that add to the productivity of land. There were illustrations of what bacteria will do for plants and tubes showing various kinds of culture.

A complete electric lighting system for try homes was shown by the Karl Hildberg Company. By this system there are no batteries and the standard volt current is generated. One can see the ordinary commercial globes and they may be stretched for a distance of miles from the generating plant. The system is guaranteed for five years and will run from one to three hundred lights continuously. It is automatic control and cannot easily get out of order.

Among the many features we have been able to mention only a few but they serve to indicate the value that may be derived from a careful visit to the state

Dairy Supplies and Tractor Exhibits

One little corner in the Standard Oil exhibit is shown at the top. The next photo shows dairy supplies of practically all kinds handled by De Laval; the third from the top, exhibit of the International Harvester Company; fourth is the Killefer Manufacturing Company's exhibit of implements for deep soil tillage. The fifth is the Sharples Separator Company's exhibit of dairy barn and creamery supplies. At the bottom is an exhibit of the Delco Light people, showing to farmers the simplicity of installation of an electric light plant giving light and power for the home.

Two Other Exhibits

At the top is a "for sure" silo. It is a stave silo of new type, concrete, tongued and grooved. It is called the Brooks Patent Cement Stave Silo. The bottom illustration, a monster scraper or leveler, a portion of the Schmelser Manufacturing Company exhibit.

## Sour "Kraut"

From the Arizona agricultural extension service we have the following directions for making sour kraut (or sour cabbage to use the American word):

Shred the cabbage finely, using a shredder which cuts it into long, thin strips. Have a barrel or keg perfectly clean and well scalded. Mix a pint of sugar and a pint of salt and sprinkle about a tablespoon over the bottom of the barrel.

Shred the cabbage into the bottom of the barrel to a depth of about six inches, and over this sprinkle a heaped tablespoon of sugar and salt.

Then pound the cabbage well, shred in some more, sprinkle on more salt and sugar, and pound again. This process is continued until the barrel is full, and the more the cabbage is pounded the better.

Place a cloth over the top of the cabbage and fit a board cover inside the top of the barrel so that it will settle down under the weight of a rock or something heavy placed thereon. Set this in a warm place to ferment. In about three days the juice will come up and cover the cabbage; fermentation will begin at once and the "kraut" will be ready to eat in about four weeks.

## "I Harrow 60 to 75 Acres a Day"

—H. O. Sebring

H. O. Sebring owns a large orange grove in Sebring, Florida.

For years, he searched for a tractor that he could use for cultivating. He declared himself unable to find a machine adaptable to harrowing through the sand in the dry spring months. Nor could he find one that would turn from one row into the next without injuring the trees.

But—

Mr. Sebring recently bought a Cleveland Tractor. It is a crawler type machine—small and light, yet with tremendous hauling capacity.

After trying it out on his grove, he found that it not only does his work well—but quicker, better and at much less expense.

Mr. Sebring attaches a 17-foot pole to the front of the machine and then hitches a six-foot harrow on each end of the pole.

"We can easily harrow from 60 to 70 acres in 10 hours," he writes.

Think of such speed. "We can turn right around the next to the last tree in the row and then come back the next row," he continues.

"At present we are using the Cleveland in a grove that needed plowing, going up one side of the trees and down the other. We have already plowed 25 acres a day of three rows.

"We figure that this work would cost \$17.50 a day with one-horse plows. I estimate that my Cleveland Tractor can be run for about \$8.50 to \$9 a day figuring repairs and depreciation much higher than they will run."

In other words—it cuts the cost in two!

What the Cleveland is doing for Mr. Sebring it will do for anyone. It crawls on its own tracks. So it can go anywhere—through sand, wet, marshy ground, up hill and even over ditches.

It is only 50 inches wide and 52 inches high—small enough to go under and between small fruit trees. Yet it develops 20 horsepower at the pulley and 12 at the drawbar.

The Cleveland is built by Rollin H. White, one of the country's best known motor truck engineers. He uses only the finest motor truck parts and gears. All gears are enclosed in dirtproof, dustproof cases. It is just the tractor you need—speedy, light and economical. Above all, it is dependable.

Agriculturists in all sections of the country are flooding us with orders for Cleveland Tractors. Our big factory is unable to keep pace with the demand.

We advise ordering now for delivery in the spring. Do not delay. Every day lost now means time lost when you need it most.

Write to us now for full information and the name of the nearest Cleveland dealer.

## OUR ADVERTISERS RELIABLE

We guarantee our subscribers against  
 loss through dishonesty of any adver-  
 tiser in the Cultivator. We do not at-  
 tempt, however, to adjust trifling differ-  
 ences between subscribers and honest,  
 responsible advertisers, nor will we pay  
 the debts of honest bankrupts. Notice  
 of complaint must be sent us within 30  
 days from date of the transaction, and  
 the subscriber must have mentioned the  
 Cultivator when writing the advertiser

## THIS WEEK'S COVER

Amongst the blue ribbon win-  
 ners at the recent state fair were the  
 champions which have been chosen  
 for this week's cover. This is one  
 of the many proofs of California's  
 ability to produce fine stock. There  
 were exhibited this year some mag-  
 nificent animals recently introduced  
 from the East. These are an honor  
 to the sections from which they come,  
 and will honor this state. Credit is  
 due to those who have brought them,  
 but there is a greater measure of sat-  
 isfaction in "California bred." It is  
 proof that the talent and capital of  
 California have been free in looking  
 to every section to bring its best  
 blood to our state. The state fair has  
 shown this to a greater extent this  
 year than any other. More satisfac-  
 tory information regarding these ani-  
 mals is to be seen at the head of page  
 299 of this issue.

## ALMOND PRICES

The Almond Growers named  
 prices last Monday. The rush of orders  
 induced the first day a raise, and on  
 Tuesday morning wires were sent out  
 raising the price one cent. Non-  
 pariels were first quoted at 20½; to-  
 day the price is 21½. Other prices,  
 including the raise are: I. X. L. 19½,  
 N. P. U. 18½, Drakes 16.

## FARM LOAN

The appeal of many of the  
 fruit growers of the southern end of  
 the state for consideration of their re-  
 quest for more just valuation of or-  
 chard lands has resulted in the prom-  
 ise of a visit by President Joyce  
 Secretary Hendrick and Treasurer  
 Ellis of the federal farm loan bank

at Berkeley. They will also be ac-  
 companied by Appraiser Shaw and  
 will meet Southern California or-  
 chardists in Los Angeles on the 25th  
 of September. It has been the policy  
 of the federal farm loan board to  
 make the same valuation on orchard  
 lands as on adjoining lands which  
 are not improved and not bringing in  
 income. The orchardists insist that  
 real value is added to lands by in-  
 come bringing improvements, which  
 the board should not ignore.

## MORE TRACKAGE

Husky grumbling was heard on  
 the grounds of the state fair this year  
 because of the lack of trackage. One  
 exhibitor who understood conditions  
 beforehand said that he stopped his  
 car of prize winners some miles out  
 of the city of Sacramento and hauled  
 his stock in in motor trucks. This  
 was expensive but satisfactory com-  
 pared to the unsatisfactory methods  
 which seemed to be necessary on the  
 grounds. When it is considered that  
 hundreds of carloads of stock and  
 other exhibits have to be handled  
 within a day or two of the opening  
 of the fair it may be appreciated that  
 one or two short platforms with sid-  
 ings are entirely inadequate. Live-  
 stock which should be in best of con-  
 dition and fitted to the highest within  
 the power of modern science lose  
 much of their spirit—and the stock  
 owner loses all of his—when it is  
 found necessary to hold in express  
 cars for 24 or 36 or even 48 hours be-  
 fore they can be released and cared for.

Dairymen have appealed for better  
 facilities for years, and this year  
 many of their requests were granted  
 and they feel their industry is more  
 generally recognized, but they, with  
 all the other livestock interests, feel  
 that at least one more radical change  
 should be made in the fair ground  
 facilities. It means too much to the  
 success of the state fair association,  
 and we doubt not the need will be  
 recognized.

## MORE WHEAT

The editor was most interested  
 and gratified by the discussions at  
 the meeting called by California's gov-  
 ernor and held in the state capitol  
 last week. It was participated in by  
 members of the state council of de-  
 fense, many representatives of the  
 state university and growers from a  
 score of California's largest produc-  
 ing counties. We had hoped to pass  
 on some of the expressions of this  
 meeting to Cultivator readers this  
 week. We have in type much of the  
 addresses made by Dr. Thomas For-  
 syth Hunt, Prof. Frank Adams, and  
 many others who realize the needs  
 and opportunities of California. Un-  
 fortunately, with state fair awards,  
 illustrations and other matter which  
 so many are demanding of the Cult-  
 ivator, this important material is held  
 over until another issue.

In a word, the situation has been  
 thoroughly canvassed. There is too  
 little food being produced; there is  
 too much being wasted. Every Amer-  
 ican is appealed to to stop the waste  
 and produce more. At the Sacra-  
 mento meeting not only were means  
 fully considered, but representatives  
 of the grain corporation were present  
 and explained the methods of price  
 making and price control on wheat.  
 This matter of price control is abso-  
 lutely new in America. Some are  
 watching with much concern to see  
 the results. It is hoped that this con-  
 trol will be necessary only as to one

grain, wheat, and that this will in a  
 measure control other prices. Mean-  
 time let every food producer consider  
 how he can add to the state's produc-  
 tion and how the 90,000 acres of in-  
 crease in wheat planting may be se-  
 cured.

## LAND SETTLEMENT

The new land settlement com-  
 mission is in action. It is sending  
 circulars to owners of land in various  
 communities asking for submission of  
 propositions which will aid the com-  
 mission in securing 5000 or more  
 acres for its first land settlement pro-  
 ject. Dr. Elwood Mead is chairman  
 of the board and Dr. David N. Mor-  
 gan is its secretary. Dr. Mead in-  
 forms us that the work of the com-  
 mission is being encouraged on prac-  
 tically every side. Some of the larger  
 landed interests which at one time  
 were considered not entirely friendly  
 to this movement have manifested a  
 desire to cooperate and aid in the  
 most effective way.

The first step of the commission  
 has been to make appeal to owners of  
 lands and interested communities for  
 definite propositions as to land. When  
 the land is secured it will be sup-  
 plied with irrigation and careful, sci-  
 entific investigation of every portion  
 of the tract made. It will be subdi-  
 vided into 20, 40, 80 and 100 acre  
 fields. Prices of the various units  
 will be fixed according to reports of  
 the experts. The type of farmer de-  
 sired is that one who will engage in  
 diversified farming. The commission  
 believes in intensive culture, but at  
 the same time it recognizes the great-  
 er opportunity for success where  
 there is diversification. There must  
 be some livestock kept on every  
 place. In this connection it is hoped  
 by the commission that certain breeds  
 will be kept by these farmers, that is,  
 in dairying, let every farmer in the  
 tract who keeps a cow keep a Hol-  
 stein, a Jersey, a Guernsey or an  
 Ayrshire, whichever breed is adopted  
 by the community. Then let there be  
 rivalry between farmers as to who  
 shall keep the very best animals of  
 this particular breed. The neighbor-  
 hood should unite and buy the best  
 bull of the breed which it has, or can  
 borrow, the capital to pay for. In  
 this way a name for this community  
 may be built up as the producer of  
 some of the finest of the breed and as  
 a section where quantity may also be  
 had.

The commission has in hand \$260,-  
 000, \$10,000 of which is for the immed-  
 iate expense of the commission. The  
 remainder must be invested in the  
 first project. Two hundred and fifty  
 thousand dollars is for improving and  
 fitting this for the settlers. Within  
 the period of 36 or 40 years these  
 monies will be returned to the state  
 treasury with interest.

But we find we are entering too  
 much at length into this plan, at least  
 for this particular page. Another  
 week we will give more of the par-  
 ticulars which were given to us in a  
 few minutes interview with Dr. Mead  
 after the last meeting of the com-  
 mission in Sacramento.

Australia has benefitted her set-  
 tlers, herself and made much money  
 in direct profit because of a similar  
 land settlement scheme. Dr. Mead's  
 connection with the Australian pro-  
 ject fits him for giving to California  
 wonderful service. We are leading  
 the United States in this advanced  
 step. We hope and believe it is  
 fraught with great opportunity for  
 greater good than most of us appreci-  
 ate.

## Agricultural News No

The Western Fruit Jobbers' As-  
 sociation will hold its next annual  
 meeting at Houston, Texas, January

California gets almost a half mil-  
 lions dollars from the \$14,000,000 ap-  
 propriation for the construction  
 and maintenance of rural post roads

Onion growers around Laredo,  
 Tex., received the past season, \$3  
 000 for the Bermuda onion crop  
 exceptionally high prices were received

Burma exports 22,792,000 quarts  
 of rice. Its production is increas-  
 ing slowly. Its freight rate is now  
 being 18 fr. per quintal as compared  
 with 3.2 frs. previous to the war

California is not the only pro-  
 ducer of lima beans. The island of  
 Madagascar, off the southeast coast  
 of Africa, last year produced 14,000  
 tons of limas. Most of these were  
 shipped to London.

Maryland and many of the  
 municipalities within the boundary  
 that state unite in the establish-  
 ment of municipal forests, this partly  
 for the sake of watershed protection  
 partly for recreation purposes.

This week Hoover of the fed-  
 eral administration will address  
 businessmen of all America at the  
 States chamber of commerce  
 tails of greater efficiency in  
 business and farming interests  
 war measure.

Porto Rico's output of sugarcane  
 year was in excess of half a million  
 tons. That was the first year  
 ever reached such high figure  
 was nearly 20,000 tons increase  
 the preceding year. The pro-  
 duction of the present season's  
 will materially exceed that.

Weather conditions are con-  
 tinuing fine over practically all corn  
 and another week without frost  
 mean that almost every bushel  
 corn in the United States is safe  
 that more than the 3,000,000  
 bushel crop is practically assured  
 Present indications are that  
 year's production, as compared  
 that of last year, is 125.7 per cent

Two assistant secretaries of  
 agriculture have been appointed  
 president. They are: Clarence  
 ley, director of agricultural extension  
 in Texas, and Dr. Raymond A.  
 son, president of the Iowa state  
 college of agriculture. Provision  
 appointment of these secretaries  
 made in the recently enacted food  
 production measure.

President Menocal of Cuba has  
 a great worker for agricultural  
 improvement in his country and  
 himself an enthusiastic farmer. His  
 appointment is now announced  
 secretary of agriculture for Cuba  
 new appointee is Dr. Sanchez  
 monte who is a planter, breeder  
 registered horses and cattle and  
 believer in up-to-date methods of  
 culture and farm handling.

Recent figures of the crop in-  
 creasing board of the United States  
 department of agriculture indicate  
 wheat production this year, compared  
 with last, will be about 104.4 per cent  
 This is not as great as wished  
 because of winter killing and  
 because of drouth and heat in  
 Texas and other large wheat  
 areas. Oats, on the other hand, show  
 material increase, 122.4 per cent,  
 112.7 per cent, rye 118.1 per cent,  
 greatest of all, buckwheat with  
 100 per cent. Potatoes, likewise, show  
 most as great increase as buckwheat  
 with 102.1 per cent.

# Agricultural News Notes of the Pacific Coast

## Northern California

fruit shipments are falling off decidedly.

Blackeye beans are being harvested in Sutter County.

The rice mill at Gridley will be put in shape to operate this fall.

Yolo County reports a crop of 500 tons of almonds in the valley running from Esparto to Rumsey.

The state board of control has appropriated \$5000 to be expended in fighting mealy bug pest control.

The San Francisco Grain Exchange is wired to Herbert Hoover asking for the price of California wheat is.

The Peach Growers will pay growers 10 cents per pound on delivery on all grades and varieties of dried peaches.

The California Development Board reports rice buyers in the field offering \$3.00 and better for this season's crop.

Rice growers are busy shooting the chaffbirds in their grain. The recently enacted law gives them the privilege.

Dixon, Solano County, is again discussing the building of a canal system to irrigate some 20,000 acres of land.

The sugar beet factory at Hamilton, Glenn County, is in operation. It has had difficulty in securing sufficient labor.

The suggestion is made that the Feather River highway be chosen as the route for the Lincoln Highway to California.

During the month of August Gridley, Butte County, shipped out 106 loads of fruit and grain and 1800 cases of butter.

The warehouse of the Sutter Almond Growers' Association opened September 10 and will be open for receiving nuts on each Monday.

The California Land Settlement board has asked owners of from 4000 to 6000 acres of land suitable for intensive cultivation to submit bids.

At the recent annual meeting of the Olive Products Company at Oroville B. B. Meek was elected president and Carleton Gray, secretary-treasurer.

Many of the olive canneries of the state have found it profitable to handle other products. Some of them handle fish, others tomatoes, figs and various by-products.

The Ukiah cannery is running day and night with a force of 200 hands. Four thousand pounds of beans are brought in each alternate day. The bean run is expected to last 40 days.

The last of the 1916 rice crop stored in the warehouse at Maxwell, Colusa County, was shipped last week. Shipments from this point for the season have amounted to over 100,000 bags.

There are three associations of the Almond Growers' Exchange in Yolo County; one at Guinda, one at Esparto and another at Rumsey. All nuts sent out from their packing houses carry on the sack "Yolo County."

Secretary Murdock of the California Raisin Association has been looking over the field in Sutter County the past week. The dryers are finding it difficult to get sufficient help to pick the grapes as fast as the dryers can handle them. Many women are picking.

## Central California

Kings County is now working for a farm adviser.

Tractor short course, University Farm, Davis, November 5-15.

The first car of Malagas of the 1917 crop was sent from Kerman to Boston.

Chowchilla, Madera County, has abandoned its plan to hold an agricultural fair this fall.

Eight thousand raisin trays were destroyed by fire on a ranch near Armona last week.

A sheep raiser near Porterville reports the loss of 3000 sheep from eating poisoned grain.

In compliance with the new state law many cattle and sheep men of Tulare County are recording their brands.

The Lindsay Ripe Olive Company has shipped its last car of olives for the season's run and is now preparing to handle tomatoes.

The food administration announces that the entire American sugar industry will be placed under government control on October 1.

Exhibits for the land show to be held in San Francisco are being sought by secretaries of chambers of commerce of various counties.

The Fresno County farm bureau held a silo building demonstration August 31 and September 1 at the Hillcrest Farm south of Carruthers.

A special prize of \$300 for the best pure bred dairy herd is offered by directors of the Fresno district fair. Entries close Monday, September 24.

All strike troubles were settled at the Libby, McNeil and Libby cannery at Selma, the strikers returning to work on the same terms as before the strike.

In an effort to break up the Prune and Apricot Growers' Association outside packers are said to be offering as high as seven cents per pound for prunes. The association guarantees its members six cents.

Representatives of the cottonseed crushing and refining industry are in conference with food administration officials with a view to putting the industry under voluntary regulation by the food administration.

Grape growers of the Alta district of Tulare County will meet at Dinuba today with the state viticultural commission for the purpose of inspecting the restoration work of J. W. Jeffrey in vineyards of that section.

A committee representing the sugar beet interests of California is endeavoring to secure refugee laborers from those recently deported from Bisbee, Arizona, to aid in the harvest of the sugar beet crop.

Work has been started on the fair grounds of the Stanislaus Live Stock Show and Exposition which will be held the coming week. A special train will be run from Sacramento to bring prize winners from the state fair to the Stanislaus Exposition.

The so-called "mysterious disease" affecting vineyards in some sections of Tulare County is now said to be not a disease but a condition caused by alkali brought up by the seepage of surface water. After treating such affected portions of the vineyard with gypsum the vines were found to have made speedy and complete recovery.

## Southern California

Orange County is taking active steps toward securing a farm adviser.

The Hemet Canning Company has been turning out from 75 to 85 tons of peaches daily.

Alfalfa growers will have a special exhibit at the Riverside Fair to be held October 9-16.

Wheat rather than barley will be planted more generally by farmers of Imperial Valley this fall.

Imperial Valley is elated over the way in which her irrigation waters are holding up this season.

Ranchers of the Coachella Valley are planning for a larger acreage of onions than any previous year.

The Santiago Fruit Growers' Association of Orange County expects to build a \$125,000 precooling plant.

The College Heights Citrus Association at Claremont received this year practically a half million dollars.

Ranchers of the Hemet-San Jacinto Valley are urged to make exhibits at the valley fair which will be held October 16-19.

The packing house of the Foothill Valencia Growers' Association of Orange County burned last week with a loss of \$12,500.

The San Jacinto-Hemet Valley Fair Association has decided to declare off for this season the fair which it had planned to hold.

The Apple Show held at Yucaipa every fall will this year be held November 1-4 and will be called the Southern California Apple Show.

Citrus growers of San Bernardino County met last Wednesday to formulate plans for the organization of a county citrus fruit growers' association.

North Whittier, Los Angeles County, will have a big production of beans, much of the output being grown as an intercrop in walnut and citrus groves.

An owner of a flock of 2500 Angora goats near Elsinore, in Riverside County, recently finished shearing his flock. It is expected the wool will bring 70 cents per pound.

California led all cotton producing states in 1916 in average yield per acre and average price per pound received by growers for short staple, growers average 20 cents per pound.

One of the most severe forest fires for years has just been brought under control by Forest Supervisor Charlton and a corps of fighters in the mountains north and west of San Bernardino.

The annual fair of the Soboba Indians is being held today. This is probably the largest Indian fair held in Southern California and is attended by Indians from all over the southern part of the state.

The Saticoy Walnut Growers' Association at its recent annual meeting elected the following directors: J. M. Sharp, J. M. Dickinson, E. O. Tucker, G. A. Smith, H. F. Clark, T. A. Kelsey and L. B. Hogue.

In accordance with government recommendations the Pomona high school will this year offer a course in practical agriculture. Students taking the course will be expected to spend several hours each day in home work.

## The Coast

Wenatchee will build a \$13,000 fruit drying plant.

The Seattle market reports a slight demand for early apples.

Douglas County, Washington, will have a \$7,000,000 wheat crop.

County agents of Arizona are making a state wide crop survey.

A grain elevator to cost \$100,000 will be erected at Ogden, Utah.

The Indians of the Yuma reservation held a three-day fiesta last week.

Eight hundred cars of pears will be shipped from North Yakima, Washington.

Cotton raisers of Yuma Valley Arizona, have organized a cooperative association.

Bean growers of Pueblo County, Colorado, controlling 19,212 acres, have formed an organization.

An onion grower of Texas has begun suit because of non-delivery of crates purchased on contract.

Five hundred coolies will be imported to aid in harvesting the cotton crop of Lower California.

Seventy-nine cents a pound for long staple cotton is reported being paid in the Salt River Valley of Arizona.

One thousand Belgians will be colonized on a tract of 18,000 acres above the Grand Ronde reservation in Oregon.

Owing to shortage of cars for transporting to pasture many cattle are dying in drouth stricken portions of Texas.

A \$1,000,000 sugar beet factory will soon be built at Rigby, Utah. Six thousand acres are already contracted.

The entire Northwest faces a box lumber shortage, and much fruit will be shipped in paper and cardboard containers.

Onion growers of Texas have agreed on the standard bushel crate, as approved by the department of agriculture.

The cranberry crop of Washington, estimated this year at about two-thirds of normal, will be ready about September 30.

Salt River Valley cotton fields report 95 per cent of normal yield. The crop has been reduced by summer rains and by inroads of insects.

A large Arizona stockman says "From a stockman's point of view Arizona conditions have not been better in 30 years than they were on August 1."

The live stock sanitary board of Arizona proposes to reduce the number of live stock brands on which filing has been made but which for years have remained unused.

Whatcom County, Washington, is expecting a \$250,000 crop of peas. Agents of both the United States and Canadian governments are already in the field bidding for the output.

Navajo Indians have been taking advantage of the high wool prices to market their clip at Holbrook, Arizona. Many of them are prosperous and market their wool in their own auto trucks.

State inspection of fruit shipped from North Central Washington was discontinued the first of September because of the discontinuance of the services of many horticultural inspectors for lack of funds.

# Holsteins at the State Fair

Written for California Cultivator By C. L. Hughes

**T**HE Holstein show at the 1917 California State Fair was as a whole the most interesting yet made by the breed at this fair. It was a long way from the best showing in some of the classes, while other classes were perhaps better than similar classes at previous fairs.

Main interest centered about the entries of several exhibitors showing for the first time. Of these the herds of the J. S. Gibson Company and J. H. Harlan Company made a most favorable impression and justified popular approval by their show ring winnings.

Among exhibitors who have shown at this fair before, Bridgford Company uncovered a splendid show herd up in most classes to the high standard which this company has set for type in their herd. Napa State Hospital showed a splendidly fitted herd and is to be complimented highly for the extraordinary showing made with such a comparatively small herd to select from. John Benoit showed a small herd but they would not have been out of place in any company and were well up in the money in this fast show. George Kounias made an excellent showing, and better ones may be expected of this herd at later fairs for Kounias is a young breeder who is coming ahead fast with very good judgment of type. Toyon Farms showed only a few head and were up on the front line at all times.

The aged bull class as a whole was hardly up to the standard set at this fair for several years back. The Benoit bull, El Prado Wayne Colantha, was a comparatively easy winner in this class, and this bull may well be watched for future shows as he develops. The Gibson bull, Segis Creamcup Pontiac, was placed second in this class and is a showy fellow but lacked considerable of the front end and quality of the bull placed above him. The Kounias bull, King Korndyke Hengerveld Ormsby, took third position and was in many respects the most commanding bull in the class, but lacked something of the refinement of line of the two bulls placed above him. The fourth bull was in fit condition but fell somewhat short in barrel and topline. The fifth bull was an attractive fellow, almost pure white in color, but lacked in barrel to go higher in this class, and somehow did not show to good advantage the straight topline that the writer has noted in this bull as he stood in his home paddock.

The Harlan bull, Prince Butter Boy Walker, had a walkover in the two year

old class. He was later made senior champion and contested grand championship honors with a bull to which it was no disgrace to lose. This bull is a son of Prince Gelsche Walker, and he should be heard from outside the show ring.

The senior yearling class uncovered an outstanding winner and the junior and grand champion in the Bridgford bull King Segis Alcartra Prilly. This bull is unquestionably one of the most promising show bulls yet uncovered at California state fair. The youngest bull in the class, he yet excelled in size and is a wonderfully deep bodied fellow with a great topline and commanding bearing. The Gibson bull, Segis Annie De Kol Burke, took second position by a narrow margin over the son of Segis Pontiac De Kol Burke recently purchased by Gonzalo Campo y Cia, Santiago, Chile, thus reversing the positions won by these two bulls in their senior calf form. Fred Ross broke into the money in this class with Rossmead Fidessa Pieterje.

The junior yearling class brought a good bunch of young fellows of which the Gibson bull, Segis Mead Walker, son of Prince Gelsche Walker, looked the best by a comfortable margin. Two sons of King Valdessa won the next two places, the second money going to the Harlan bull, Toyon Valdessa Hengerveld, and third money to the Toyon bull, FINDERNE Soldene Valdessa. It was a hair line decision between these two bulls with superior fitting a factor in the decision.

The senior bull calf class brought out a snappy bunch of youngsters, the Bridgford calf Nudine Butter Boy winning easily. Gibson landed the next two places with two sons of Segis Creamcup Pontiac, while Heroux came in for fourth money and Fred Ross' entry in fifth place.

The junior bull calf class was a spirited contest in which the five moneys finally went to five different exhibitors, the Heroux entry taking first position.

The aged cow class was lacking in numbers but was of acceptable quality. Last year's first prize winner was not to be denied again this year and the Bridgford cow Miss Korndyke Mercedes 2nd took first position and was later made senior and grand champion. Second place was won by the Napa State Hospital cow Hazelwood Heilo Queen. In this class she lacked the constitution and capacity to win over the cow placed above her.

The three year old cow class brought

out only two entries, Napa winning first with last year's grand champion at Washington State Fair, and Bridgford second.

From here on Judge H. H. Kildee found plenty of action in every class. In the two year old class the Heroux heifer, Riverview Bracelet Brett, won first place on her great refinement of type, although possibly lacking a bit in ruggedness and capacity. Bridgford's entry scored second in this class and Gibson's entry was a strong third, with Napa and Heroux taking next two places.

The senior yearling class brought out one of the best classes of this age yet shown at this fair and the winner was good enough to take junior championship later on. The Napa state hospital heifer, Fay Nook Creamelle, finally took first money, and is a beautifully finished heifer of promising form. Second place went to the Gibson heifer, Colantha Juliana Dotty Sunnyside, a great favorite at the ringside. The Harlan entries of two splendid daughters of King Mead of Riverside took third and fifth places with the Bridgford heifer, Miss Pontiac Model De Kol, sandwiched between.

Gibson came out fully armored for hot competition in the junior yearling heifer class and won first and second, first money going to a most promising daughter of King Mead of Riverside. Fred Ross moved up to third place in this hot class, while Bridgford took the next two places.

Possibly the most uniform class of the whole show was the senior heifer calf class. The decisions in this class were decidedly of the hairline variety, with the beautiful Bridgford heifer, Jennie Korndyke Walker, going to top place. Blood told here as she is a daughter of King Walker 5th, son of the famous National Dairy Show winner Paula of Chagrins Falls 3d. The Gibson heifer, Princess Hazel Pontiac Alcartra, took second position with the Napa state hospital entry next, Gibson in fourth place and Bridgford in fifth. The heifers that were left out of the money in this class were good enough to make up a strong show class themselves.

The strong junior heifer calf class settled down to a contest between Bridgford and Harlan, honors finally going first and third to Bridgford and second and fourth to Harlan.

In the group classes Napa state hospital won first on aged herd with Gibson second. The presence of the grand champion bull at the head of an otherwise excellent breeders' young herd made first money certain for the Bridgford entry in this class. Bridgford also showed a coking good calf herd winning first, with Gibson's well balanced entry in second place and Harlan in third place with a herd that suffered somewhat from the handicap of youth.

Fred Ross took down his first blue in the produce of dam class, completing a Holstein show that will long be remembered by California state fair regulars.

The work of Judge Kildee was of high character and met with the fullest approval both from exhibitors and the ringside talent.

Exhibitors—J. S. Gibson Co., Williams; J. H. Harlan Co., Woodland; Bridgford Co., Knightsen; J. W. Benoit, Modesto; S. G. Kounias, Modesto; Napa State Hospital, Napa; Toyon Farm Assoc., San Jose; F. A. Heroux, Oakland; Fred D. Ross, Hanford; E. G. Wharton, Tulare; Gonzalo Campo y Cia., Santiago, Chile, S. A.

## Awards

Bulls, three years and over — 1, El Prado Wayne Colantha, Benoit; 2, Segis Creamcup Pontiac, Gibson; 3, King

Korndyke Hengerveld 7th, Kounias; Prince Rag Apple Imperial, Napa Hosp.; 5, It State Bells, Wharton.

Bulls, two years and under three—

Prince Butter Boy Walker, Harlan.

Bulls, senior yearlings—1, King Segis Alcartra Prilly, Bridgford; 2, Segis Annie De Kol Burke, Gibson; 3, Segis Pontiac De Kol Burke 11th, Campo y Cia; 4, Rossmead Fidessa Pieterje, Ross; Sir Aagie Alcartra Korndyke, Gibson.

Bulls, junior yearlings—1, Segis Mead Walker, Gibson; 2, Toyon Valdessa Hengerveld, Harlan; 3, FINDERNE Soldene Valdessa, Toyon; 4, Rossmead Alcartra Kol, Ross.

Senior bull calves—1, Nudine Butter Boy, Bridgford; 2, Prince Pontiac Alcartra, Gibson; 3, Hartog Korndyke Pontiac, Gibson; 4, Model Domino Gha Heroux; 5, Rossmead Korndyke De K Ross.

Junior bull calves—1, Dutchland Aggie's Lucky Guess, Heroux; 2, Hazel Pontiac Gem, Napa St. Hosp.; 3, Benoit of Gibson; 4, Toyon King Korndyke 5, dene, Kounias; 5, Toyon King Korndyke Pet, Toyon.

Senior champion bull — Prince Butter Boy Walker, Harlan.

Junior and grand champion bull—King Segis Alcartra Prilly, Bridgford.

Cows four years and over — 1, Miss Korndyke Mercedes 2nd, Bridgford; Hazelwood Heilo Queen, Napa State Hospital; 3, Koroba Electa, Benoit; Midnight Marie, Napa St. Hosp.; Spring Farm Pauline Pontiac 2nd, Bridgford.

Cows, three years and under four—Bessie Johann Lill Black, Napa St. Hosp.; 2, Spring Farm Pontiac Maid 2nd, Bridgford.

Cows, two years and under three—Riverview Bracelet Brett, Heroux; Bos Antonia Cornucopia, Bridgford; Queen Pontiac Charlotte Korndyke, Gibson; 4, California Colantha Bess, Napa St. Hosp.; 5, May Flower Pieterje, Heroux.

Senior yearling heifers—1, Fay Nook Creamelle, Napa St. Hosp.; 2, Colantha Juliana Dotty Sunnyside, Gibson; 3, Hazelwood Korndyke 2nd, Harlan; 4, Miss Pontiac Model De Kol, Bridgford; Nadgi Korndyke Mosl, Harlan.

Junior yearling heifers — 1, Contenta Riverside Mead, Gibson; 2, Cora Forth of Linwood, Gibson; 3, Rossmead Pauline Hengerveld, Ross; 4, Valdessa Inka Korndyke, Bridgford; 5, Adeline Pontiac Segis Korndyke, Bridgford.

Senior heifer calves—1, Jennie Korndyke Walker, Bridgford; 2, Princess Hazel Pontiac Alcartra, Gibson; 3, Lady Ormsby Genesee, Napa St. Hosp.; Princess Korndyke Segis Alcartra, Gibson; 5, Princess Inka Butter Girl.

Junior heifer calves—1, Woodbine Pontiac Cornucopia, Bridgford; 2, Margaret Walker Moore; 3, Inka Hengerveld Korndyke Pontiac, Bridgford; 4, Modjeska Walker Crane, Harlan; 5, N. S. E. Midnight Marie.

Senior and grand champion cow—Miss Korndyke Mercedes 2nd, Bridgford. Junior champion cow—Fay Nook Creamelle, Napa St. Hosp. Cow with semi-official yearly record—1, Princess Jetze, Gibson.

Aged herd—1, entry of Napa St. Hosp.

2, entry of Gibson.

Breeder's young herd — 1, entry of Bridgford; 2, entry of Harlan; 3, entry of Ross.

Calf herd—1, entry of Bridgford; 2, entry of Gibson; 3, entry of Harlan.

Get of sire—1, get of Segis Creamcup Pontiac, Gibson; 2, get of Prince Butter Boy Walker, Harlan; 3, get of Creamcup Fidessa Cornucopia, Ross.

Produce of dam—1, produce of Fidessa Pieterje, Ross; 2, produce of Napa Aagie of Oakwood, Gibson.

## State Fair Observations

Messrs. Guilford, Stonerod and Briggs Give Items Regarding Live Stock

By W. S. Guilford

### HOGS

The most striking features of the 1917 hog show were the large number of new

exhibitors who were prominent prize winners and the uniformity and excellence of the show throughout. There were very few poor or common hogs of any breed shown, and there were six months old pigs in nearly every breed that weighed close to 300 pounds. The profitable production of high class pork is the object sought by those who are breeding hogs of all breeds, and all are accomplishing this.

### The Judges

The state fair board is to be commended for the capable and high class lot of judges selected to rate the hog classes this year. Elbert J. Barker of Thornton Indiana, who passed on Berkshires, is one of the most prominent breeders in America, an old time exhibitor and a man whose judgment and honesty is unquestioned. He was given a vote of thanks by the exhibitors. J. J. McLain of Anna Texas, who judged Duroc-Jerseys, is a breeder and exhibitor and president of the National Duroc-Jersey Swine Breeders' Association. Walter Gatton is one of the best posted hog men in the West. He judged Yorkshires, Chester Whites and Hampshires. Howard Frances of New Lenox, Illinois, the Poland-China judge, has bred and exhibited hogs for many years and has won grand championship on fat barrows at the International at Chicago several times.

### Chester Whites

Chester White hogs are becoming more widely distributed over the West than the number of exhibitors at the fair this year would indicate. The reason for this is that they are being bought more by farmers than by breeders who will exhibit them.

Three good herds were represented, and the Chester White division was nicely decorated and kept neat and clean, like the Yorkshire section. The two barns which housed the Yorkshires and Chesters were at the beginning of the hog show, and the impression made by

## The Third Sacramento Sale — 150 Registered Holsteins

The Third Sacramento Sale of registered Holsteins will offer established breeders and beginners unusual opportunities to secure breeding animals of the best quality. Aside from the very high excellence of the cattle in this sale, there is unusual attractiveness added in the way of health requirements. Every animal over six months in this sale has an individual tuberculin test certificate issued by a veterinarian approved by the sales company, and the buyer will be permitted to tuberculin retest every such animal he buys, turning back to the seller at full purchase price any animal that might react on retest.

In this sale will be offered splendidly bred heifers and cows in calf to bulls whose daughters have never been offered for sale, and it will be the opportunity of the season to secure daughters of these sires in the only way they can be secured.

Just consider a few of these opportunities in this sale:

Cows with A. R. O. records up to over 28 pounds butter in seven days, and heifers of most desirable breeding and of show quality bred to King Segis Alcartra, Abbecker and King Segis Alcartra Prilly, both sons of the \$50,000.00 bull King Segis Pontiac Alcartra and both out of 30 pound

dams of great transmitting quality.

Splendidly bred cows and heifers in calf to Sir Aagie De Kol Acme, whose dam is Aagie Acme of Riverside 2nd, 35.36 pounds butter in seven days, 1095.1 pounds butter in one year as a four year old, and she is now well along on another year's test that promises to go well over 1300 pounds butter.

Choice cows and heifers bred to King Morco Alcartra, whose dam is Tilly Alcartra, the world's greatest dairy cow, the only cow in the world to average 24,000 pounds of milk per year for five years, and this covers her first five lactation periods; the only cow of the breed to average over 1000 pounds butter per year for four years; the only cow in the world to average 963.32 pounds butter per year during her first five lactation periods.

Young cows and heifers of outstanding merit and breeding bred to Prince Gelsche Walker Korndyke, the \$4000 son of Prince Gelsche Walker.

Some of the best bred and best developed heifers ever led into a California sales ring in calf to it, son of Pontiac Clothilde De Kol 2nd, 37.21 pounds butter in seven days, 1271.6 pounds butter in one year, world's records when made, and she is one of the greatest if not the greatest

transmitting cow of the breed. In no sale, with the possible exception of the Stevens Bros. Co. Dispersal Sale, have buyers had an opportunity to secure such great heifers bred to it as they will have here.

About 20 high class heifers and cows, many out of A. R. O. dams with records up to over 29 pounds butter in seven days, will be sold in calf to Sir Skylark Ormsby Hengerveld. He is the only bull in California with three 30 pound daughters; he is the only bull in California with two 30 pound daughters and a 30 pound granddaughter all under mature age; he is the sire of the cow that holds the yearly butter record for the northwestern states with a record of 1127.8 pounds butter in one year, record made at past nine years of age and she came back at her next freshening and made over 30 pounds butter in seven days at past 10 years of age. There will be many opportunities to buy such females in calf to this sire, and his offspring is not only in great demand today but will be in greater demand as more of his daughters are developed.

This is just an opening outline of the great cattle that you will find in this sale. If you want to get some of the best begin to plan now to attend this sale and jot down the date and place.

## State Fair Grounds, Sacramento, California

Please Apply for Catalog Now. Sales under management of

TUESDAY And WEDNESDAY  
OCTOBER 30-31, 1917

CALIFORNIA BREEDERS SALES AND PEDIGREE COMPANY, J. M. Henderson Jr., President, C. L. Hughes, Sales Mgr.  
SACRAMENTO, CALIFORNIA

These attractive shows were good. Many of the fair visitors will have a better opinion of the hog business because of it. It is a further demonstration of the well known fact that business and advertising ability will produce results in the exhibition of hogs as well as anywhere else. A lot of mellow, easy feeding Chesters were shown, and they were attractively presented.

#### Yorkshires

At the Panama-Pacific Exposition the Yorkshire interests were represented by one breeder. This year hogs from three Yorkshire herds were shown. Interest in Yorkshires is increasing and Yorkshire breeders are producing a hog now that stains all of the vigor and prolificacy of which the breed is noted, but combines with it a little heavier covering of fat.

McCarthy of Riverina Farms, Modesto, as the pioneer Yorkshire herd and has supplied animals to the other breeders in the state. Tubbs won championship on a boar recently imported from the East. McCarthy won the sow championships. The show was very attractive. A lot of fine hogs were brought forward in splendid condition.

#### Hampshires

Improvement over previous shows was the order of day in the swine division, and nowhere was it more marked than in the Hampshires. There were six months pigs weighing right at the 300 pound mark, and it required evidence of good feeding as well as good breeding to put them in the ring. The Hampshire show made many friends for the breed and was a credit to the exhibitors.

#### Duroc-Jerseys

"Two hundred per cent better than last year"—this is the estimate made of the 17 Duroc show by Walter Gatton who judged them last year and who is in close touch with the affairs of the breed. Durocs are becoming more popular every year in California. As will be noted in the list of awards which follows, many new names appear, and these new exhibitors were prominent winners. The Duroc-Jersey hog is noted for being very prolific, having plenty of length and size, and being a good rustler. Breeders report sales particularly good this fall.

#### Berkshires

There were not so many Berkshires shown as last year, but there were more good Berkshires than have ever before been brought together in the West. The show was uniformly good throughout. A good Berkshire or a good Berkshire in poor condition—cannot win in a Western showing.

More new breeders exhibited Berkshires than ever before, and the fact that they won in some of the most closely contested classes shows that men who know good hogs and can feed them right are coming into the Berkshire ranks. This is a hopeful sign for the future of the breed in this territory. Frank Anderson of Sacramento won second and third on sow pigs that he raised and sows he bought in congress sale at Davis last February. Dr. Hammond won first on a boar pig.

Prizes were well distributed; no one made a clean sweep. Grand champion went to Perkins on a hog bought from him by Humphrey. The grand champion sow was bred by Carruthers and bought by Harry Murphy. Every breeder whose name appears in the following list made a showing that was a credit to his herd and to the breed.

Exhibitors securing awards—Perkins Co., Perkins; James Mills Orchard Co., Hamilton City; A. B. Humphrey, Escalon; H. L. and E. H. Murphy, Perkins; L. Stephenson, Los Molinos; Frank A. Rush, Santa Rosa; H. J. Hammond, Sacramento; Carruthers Farm, Mayfield; George M. York, Modesto; Frank B. Anderson, Sacramento; Napa State Hospital, Napa.

The awards:  
Boars, two years old and over—1, Perkins on Majestic King 6th; 2, Mills on Ames Rival 70th; 3, Humphrey on Solano Emblem; 4, Murphys on Artful King 11th; 5, Stephenson on Tehama Chief.

Boar, senior yearling—1, Brush on Mayfield Champion; 2, Humphrey on Fashion Longfellow 27th; 3, Brush on Incon Duke.

Boar, junior yearling—1, Brush on Inona Lee Champion 6th; 2, Hammond on Hedgemere Irving.

Boar, senior pig—1, Brush on Rincon's Rival; 2, Humphrey on Escalon Blackbird; 3, Carruthers on Mayfield Rival 11th; 4, Brush on Rival, Rincon; 5, York on Western Premier 3rd; 6, Mills on Mills Prover 3rd.

Boar, junior pig—1, Hammond on Hedgemere Star; 2, Humphrey on boar; Stephenson on Wilsonia Chief Laurel; Brush on Rincon Lee Champion; 5, Anderson on Natoma Riverby.

Sows, two years old or over—1, Brush on Rockwood Lady 100th; 2, Humphrey on Fashion Longfellow Princess; 3, Humphrey on Grand Bernice; 4, Murphy on Rival Pointer Star 15th; 5, Brush on Whier's Geronimo.

Sows, senior yearling—1, Brush on Mayfield Rosemead 5th; 2, Brush on Rockwood Belle 7th; 3, Humphrey on Escalon Lady; 4, York on Lady Rose; 5, Napa State Hospital on Lady Combination 30th.

Sows, junior yearling—1, Humphrey on Leader's Artful Belle 3rd; 2, Brush on Mayfield Lady 10th; 3, Brush on Princess Leader; 4, Murphy on Mayfield Laurel 11th; 5, Hammond on Hedgemere Belle.

Geronimo; 2, Humphrey on Solano Emblem, Fashion Longfellow Princess, Leader's Artful Belle III, Grand Bernice.

Herds, boar and three sows under one year—1, Humphrey on Escalon Blackbird, Amoretta, Escalon Ladybird, Allinda; 2, Carruthers on Mayfield Rival 24th, Mayfield Laurel 15th, Mayfield Laurel 16th, Mayfield Lady 9th; 3, Brush on Mayfield Champion, Rival B. Princess, Rival B. Princess II, Rivals Lady Lee 42nd; 4, Anderson on Natoma's Riverby, Natoma Princess, Natoma Duchess, Natoma's Beauty.

Herds, boar and three sows—1, Humphrey on Fashion Longfellow XXVII, Fashion Longfellow Princess, Leader's Artful Belle III, Grand Bernice; 2, Escalon Blackbird, Amoretta, Escalon Ladybird, Allinda; 3, Carruthers on Mayfield Rival 24th, Mayfield Laurel 15th, Mayfield Laurel 16th, Mayfield Lady 9th.

Get of sire—1, Humphrey on Solano Emblem; 2, Brush on Ames Rival 102nd; 3, Mills on Ames Rival 70th. Produce of dam—1, Carruthers on Produce of Forest Grove Laurel 2nd, Mayfield Laurel XVI, Mayfield Laurel XV, Mayfield Rival XXIV, Mayfield Master VII; 2, Humphrey on Produce of Columbia's Model 108th; 3, Brush on Produce of Riverby Princess; Winona Champion 1st, Winona Champion 2nd, Winona Champion 3rd, Winona Champion 4th.

Senior champion boar, Perkins on Majestic King 6th. Junior champion boar, Brush on Rincon's Rival. Senior champion sow, Brush on Rockwood Lady 100th; reserve Brush on Mayfield Rosemead 5th. Junior champion sow, Carruthers on Mayfield Laurel 16th. Reserve Stevenson on Miss-Villa's Laurel. Champion boar bred by exhibitor, Perkins on Majestic King 6th; Reserve; Brush on Rincon's Rival. Champion sow bred by exhibitor, Carruthers on Mayfield Laurel 16th. Fat barrows, any age—1 and 2, Humphrey; 3, Brush. Fat barrows, pen of three, any age—1, Humphrey; 2 and 3, Brush.

#### SHEEP

Sheep are so high in price and there is such keen demand for breeding animals that many breeders are sold out so closely that they have nothing to show. Others have not gone to the expense of fitting a flock and making a show when they can sell everything they raise without this expenditure.

Corriedales, a new breed developed in Australia by crossing long and fine wool sheep to secure size, a heavy fleece and hardiness on the range, were shown by Ellenwood and Ramsey of Red Bluff.

Dorsets were shown for the first time by H. H. Schmitt of Davis. This breed is noted for the milking ability of the ewes, the number of twins raised and the fact that the two crops of lambs a year can be raised.

Bullard Bros. of Woodland made a fine show of "Bullard type" Rambouillets. Their sheep combine a heavy fleece with a good mutton carcass.

Kaupke Bros. of Woodland; Calla Grove Stock Farm, Manteca, and R. F. Miller of Davis, exhibited Hampshires. Miller had champion ram, Kaupke champion ewe.

Rambouillets and Shropshire rams were shown by McInnes and Salz of Red Bluff.

#### UNIVERSITY OF CALIFORNIA

The pure bred livestock breeders of the state were proud of the showing made by the University of California. The horses, cattle, sheep and swine from the Davis farm occupied one entire barn in the livestock section. The show was in charge of Professors True, Royce, Vestal, Miller, Jack Findlay, Geo. Phillips and Geo. Hamblin.

There are prospective championship winners among the sheep, hogs and cattle and a fine lot of Percherons are shown. None of the animals were in competition.

The barn was simply but effectively decorated—adding greatly to the effectiveness of the display.

#### BEEF CATTLE

By F. F. Stonerod

Expressing the size and importance of the 1917 state fair beef cattle show is no easy matter and it would require considerable space to crowd in a complete account of the wonderful show. However, it can be summed up in one word, "inspiration." The Shorthorn show especially was an inspiration. Never before in the history of our California fair has such a lineup faced the judge in numbers or in quality. Some of the classes had 12 entries, and each entry one to be proud of in any show ring.

The Hereford class, while not so large as the Shorthorn, surprised the ring-siders by the high class individuals competing for prizes. Last year the Hereford show was a joke, as the university farm was the sole exhibitor. This year

there were four exhibitors. Next year there will be more. The beef department is fast outgrowing the stabling facilities of the grounds and will tax capacity of new barns next year.

Several surprises were in store for fair goers in the ribbon tying. The classes were difficult to place in many instances. A March 1917 calf captured junior and grand championship honors in the Hereford division, while a senior heifer calf won junior and reserve grand champion in the Shorthorn cow class.

#### Shorthorns

Exhibitors—T. T. Miller, Los Angeles; Ormondale Co., Redwood City; Jack London Ranch, Glen Ellen; Pacheco Cattle Co., Hollister; H. L. and E. H. Murphy, Perkins; Carruthers Farms, Mayfield; Hopland Stock Farm, Hopland; T. S. Glide, Davis; Roselawn Stock Farm, Woodland.

#### The awards:

Aged bulls—1, Jack London Ranch on Roselawn Choice; 2, T. T. Miller on Diamond Choice; 3, Ormondale Co. on Gold-

3 DAUGHTERS OF A 28  
POUND COW.

16 GRANDDAUGHTERS OF  
KING OF THE PONTIACS.

A FULL SISTER TO A 31  
POUND JUNIOR FOUR YEAR  
OLD.

A GRANDDAUGHTER OF  
SARCASTIC LAD HEAVY IN  
CALF TO A GRANDSON OF  
KING OF THE PONTIACS.

THREE DAUGHTERS OF  
SIR SKYLARK ORMSBY  
HENGVERVELD, THE ONLY  
SIRE IN THE WEST WITH  
THREE 30 POUND DAUGHTERS.

A GRANDDAUGHTER OF  
KING SEGIS PONTIAC—HER  
SEVEN NEAREST DAMS,  
ALL A. R. O. COWS, AVERAGE 23.10 POUNDS BUTTER  
IN SEVEN DAYS.

#### BULLS

THIS SALE WILL BE A  
RARE OPPORTUNITY FOR  
DAIRYMEN TO BUY BULLS  
OF SPLENDID BREEDING  
AND DESIRABLE IN EVERY  
WAY TO HEAD GRADE  
HERDS. THERE ARE MANY  
YOUNG BULLS OF THIS  
CLASS IN THIS SALE, INCLUDING A NUMBER OF  
GRANDSONS OF KING OF  
THE PONTIACS.

## The Big Two Day Sale of Registered Holsteins

at

### McCLURE FARM

Santa Ana, Orange County, Cal.

Tuesday and Wednesday,  
OCTOBER 16-17, 1917

will afford one of the best opportunities of many seasons for buyers to secure well bred, dependable Holsteins at their own price. This sale includes the absolute dispersal of Ernest Otto McClure's herd at Santa Ana; the herd of A. Satterberg, San Jacinto; the herd of P. H. Jarrett, Lancaster; and consignments of very desirable cattle by McAlister & Sons, Chino; Santa Anita Rancho, Santa Anita; R. Nadeau, Saugus; and Aro Farm, Buena Park. A study of the bulletin board will show a group of animals that would add to the quality of any herd.

Every animal over six months of age has individual tuberculin test certificate, issued by a graduate veterinarian on a tuberculin test made within sixty days of date of sale.

Sale under management of

California Breeders' Sales and Pedigree Co.

C. L. Hughes, Sales Mgr., Sacramento, Cal.

Auctioneers: Col. Ben A. Rhoades, Harold B. Rhoades

Clerk of Sale: Mr. H. A. Olsen, Orange County Trust & Savings Bank.

Get of sire—1, Pacheco Cattle Co., 2, T. S. Glide; 3, Pacheco Cattle Co. Produce of cow—1, Hopland Stock Farm; 2, Pacheco Cattle Co.; 3, Pacheco Cattle Co.

#### Milking Shorthorns

The dual purpose breed has evidently come to California to stay and the exhibition at the 1917 state fair was worthy of competition with the best in the country. There were only three exhibitors but every class was well filled and the individuals were pronounced by Judge Carlisle to be the best he has seen this year.

The senior bull calf, Westward Ho, captured grand champion bull, and Lady Beatrice, the wonderful imported cow, was an easy winner in all her classes including grand champion. The Murphy boys showed a nice string and were particularly strong in the produce of cow class.

Exhibitors—Alexander and Kellogg, Suisun; H. L. and E. H. Murphy, Perkins; and Thos. Harrison, Glen Ellen.

#### The awards:

##### Herefords

Exhibitors securing awards—W. J. Bemmerly, Woodland; D. O. Lively Stock Farm, San Francisco; H. H. Gable, J. A. Bunting, Mission San Jose; Mrs. J. H. Ware, Live Oak; Kern County Land Co., Bakersfield; H. L. and E. H. Murphy, Perkins; and Western Meat Co., San Francisco.

##### The awards:

Bulls, senior yearling—1, Bemmerly on Bonnie Brae. Bulls, junior yearling—1, Lively on Bertram Fairfax; 2, Bemmerly on O'Connor. Bulls, junior calf—1, Gable on Diamond Fairfax; 2, Bemmerly on Kenneth Splawn.

Cows, three years old or over—1, Lively on Lady Berenda 208th; 2, Bemmerly on Lady Dulcinea; 3, Lively on Lady Berenda, 200th. Cows, two years old and under three—1, Bemmerly on Goldie Donald. Cows, junior yearling—1, Bunting on Baby Bunting; 2, Lively on Lady Evenho; 3, Bemmerly on Patricia Splawn. Cows, senior calf—1, Bunting on Grace Bunting; 2, Bemmerly on Nolo Ray. Cow, junior calf—1, Bunting on Lady Tintinger; 2, Bemmerly on Alyand; 3, Bemmerly on Ruth Dulcinea.

Junior champion bulls, under two years—Champion, Lively on Diamond Fairfax. Senior champion cow, two years old or over—Champion, Lively on Lady Berenda 208th. Junior champion cow, under two years—Champion, Bunting on Lady Tintinger. Grand champion bull, any age—Grand champion, Gable on Diamond Fairfax; reserve grand champion, Lively on Bertram Fairfax. Grand champion cow and heifer, any age—Grand champion, Lively on Lady Berenda 208th; reserve grand champion, Bunting on Lady Tintinger.

Hereford breeders' young herd—1, Bemmerly on Bonnie Brae 96th; Edith Hope; Patricia Splawn; Nolo Ray. Hereford calf herd—1, Bemmerly on Kenneth Splawn; Nolo Ray; Alyand.

Hereford get of sire—1, Bemmerly on get of Mr. Perfection; O'Connor; Patricia Splawn; Edith Hope; Nolo Ray. Produce of dam—1, Bemmerly on produce of Ruby Splawn; Kenneth Splawn; Patricia Splawn; 2, Bemmerly on produce of Molly Hope; Edith Hope; Alyand.

#### Aberdeen Angus

All awards to Ware.

Fat Cattle, Any Breed, Pure Bred or Grade

Steers, one year and under two—1, Kern County Land Co. on Steer; 2, Murphy on Kelley. Car lot steers, any breed, one year old or over—1, Kern County Land Co. on one entry; 2, Western Meat Co. on one entry.

#### Guernseys

The absence of one regular exhibitor this year was more than made up by the presence of two new breeders, and the

number of Guernseys exhibited was unexpectedly large.

B. E. Nixon captured a long string of ribbons including grand champion cow and bull but both A. J. Welch and Calla Grove Farm furnished strong competition. Mr. Welch led a wonderfully typey cow in the ring to compete with Nixons champion and but for a temperature of 104 due to fever she would have had a good chance to win as she carries a wonderful udder and is full of quality. Calla Grove Farm won junior and reserve champion cow on a six months old daughter of Itchen May King. Interest in the guernsey classes was intense throughout and the remarkable demand for breeding stock by fair goers shows how popular this great breed of cattle has become in California.

#### Jerseys

While the Jersey show was less in numbers than last year the quality of individuals shown was high and great interest was shown in the judging. Exhibitors were: O. J. Ames, J. B. and J. E. Thorp, C. P. Hembree, Guy H. Miller, S. F. Williams. All classes were hotly contested as usual, with the best of good feeling between the exhibitors. A number of Jersey breeders from different parts of the state were interested spectators.—C. A. Briggs.

Exhibitors securing awards—C. P. Hembree, Monmouth, Ore.; Guy H. Miller, Modesto, Cal.; J. B. and J. E. Thorp, Lockeford, Cal.; S. F. Williams, Orland, Cal.; Dr. H. W. Hand, Glenn, Cal.; O. J. Ames, Oakdale, Cal.

#### The awards:

Bulls, three years old and over—1, Hembree on Rochette's Noble Duke; 2, Miller on Altama Interest; 3, Thorp on Imp. of L; 4, Hembree on Undulatta Prince; 5, Williams on Alva Lady's La Foss Boy. Bulls, two years and under three—1, Williams on Golden Maidkin's Boy; 2, Hembree on Clover Blossom's Noble Boy. Bulls, senior yearling—1, Thorp on Jolly Senator Raleigh; 2, Williams on Noble Lucy's Warder Boy. Bulls, junior yearling—1, Hembree on Inglenook Lass' King; 2, Williams on Coutelenc. Bulls, senior bull calves—1, Miller on Aldene's Interest; 2, Williams on King Hanford; 3, Hand on Oxford Daisy's Keep On; 4, Thorp on The Wolfe; 5, Hembree on Bull. Bulls, junior bull calves—1, Hembree on Bull; 2, Williams on Hanbright; 3, Miller on Lorita's Golden Fox; 4, Hand on Blossom's Liberty Bond.

Cows, four years old or over—1, Hembree on Imp. Brilliant Spray; 2, Thorp on Salome of Mossdale; 3, Hembree on Noble Peer's Jewel; 4, Hand on Foxhall's Sweet Blossom; 5, Miller on Goldie of Venadera. Cows, three years and under four—1, Miller on Catalina Venadera; 2, Ames on Rebekah's Figdale Nugget; 3, Ames on Dimple Bunny of Figdale. Cows, two years and under three—1, Thorp on Miss Daisy of Mossdale; 2, Miller on Martha of Venadera; 3, Hembree on Spray's Clotilde. Cows, senior yearling heifers—1, Hembree on Brilliant Spray's Gypsy; 2, Thorp on Nomie of Mossdale; 3, Miller on Angels of Venadera; 4, Hembree on Royal Queen's Pretty Girl. Cows, junior yearling heifers—1, Hembree on Brilliant Jersey Queen; 2, Hembree on Noble Duke's Little Prim; 3, Thorp on Rose of Mossdale; 4, Williams on Alta La Foss. Cows, senior heifer calves—1, Hembree on Birdie's Agnes; 2, Hembree on Silverine Pearl's Duchess; 3, Hand on Shasta Daisy Keep On; 4, Miller on Lucile of Venadera; 5, Thorp on Blossom's Miss of M. Cows, junior heifer calves—1, Hembree on Cow; 2, Hembree on Herome's Lora; 3, Miller on Cantata of Venadera; 4, Williams on Alata Dean; 5, Williams on Orland Queen. Cows having official yearly record—1, Hembree on Imp. Brill-

iant Spray; 2, Hand on Foxhall's Sweet Blossom; 3, Miller on Goldie of Venadera.

Senior champion bull, two years old or over—Champion, Hembree on Rochette's Noble Duke. Junior champion bull, under two years—Champion, Thorp on Jolly Senator Raleigh. Senior champion cow, two years old or over—Champion, Hembree on Imp. Brilliant Spray. Junior champion cow or heifer, under two years—Champion, Hembree on Brilliant Jersey Queen. Grand champion bull, any age—Grand champion, Hembree on Rochette's Noble Duke; reserve grand champion, Thorp on Jolly Senator Raleigh. Grand champion cow or heifer, any age—Grand champion, Hembree on Imp. Brilliant Spray; reserve grand champion, Hembree on Brilliant Jersey Queen.

Jersey aged herd—1, Hembree on Rochette's Noble Duke, Imp. Brilliant Spray, Spray's Clotilde, Brilliant Spray's Gypsy, Birdie's Agnes; 2, Miller on Altama Interest, Goldie of Venadera, Martha of Venadera, Angela of Venadera, Aldene's Interest; 3, Thorp on Imp. of L, Salome of Mossdale, Daisy of Mossdale, Rose of Mossdale, Daisy's Lass of Mossdale. Breeders' young herd—1, Hembree on Inglenook's Lass' King, Brilliant Spray's Gypsy, Brilliant Jersey Queen, Birdie's Agnes, Herome's Lora; 2, Thorp on Jolly Senator Raleigh, Nomie of Mossdale, Rose of Mossdale, Daisy's Lass of M., Blossom's Miss of M.; 3, Hembree on Herome's Little Hero, Royal Queen's Pretty Girl, Noble Duke's Little Prim, Silverine Pearl's Duchess; 4, Miller on Angela of Venadera, Ila of Venadera, Lucille of Venadera, Cantata of Venadera, Aldene's Interest. Calf herd—1, Hembree on Inglenook Lass' King, Silverine Pearl's Duchess, Birdie's Agnes, Herome's Lora; 2, Miller on Aldene's Interest, Kerma of Venadera, Lucille of Venadera, Cantata of Venadera, Blanche of Venadera.

Get of sire—1, Hembree on get of Undulatta Prince, Brilliant Spray's Gypsy, Brilliant Jersey Queen, Birdie's Agnes, Herome's Lora; 2, Miller on get of Altama Interest, Angela of Venadera, Lucille of Venadera, Aldene's Interest, Cantata of Venadera; 3, Williams on get of Alva Lady La Foss Boy, Golden Maidkin's Boy, Coutelenc, Alta La Foss, Hanbright; 4, Thorp on get of Marquis Golden Lad 3rd, The Wolfe, Rose of Mossdale, Daisy's Lass of M., Blossom's Miss of M. Produce of dam—1, Williams on produce of Golden Maidkin, Coutelenc, Golden Maidkin's Boy; 2, Thorp on produce of Miss Benedita, Miss Daisy of Mossdale, Rose of Mossdale; 3, Hembree on produce of Imp. Brilliant Spray, Spray's Clotilde, Brilliant's Jersey Queen; 4, Williams on produce of Bessie of Golden Trux, Alta La Foss, Hanbright; 5, Miller on produce of Fern of Venadera, Ila of Venadera, Blanche of Venadera.

#### HORSES

The exhibition of horses was greater than anticipated by many. There were some magnificent drafters and plainly the auto has not driven out the fancy gaited saddle horse. The coach horse seems to have largely disappeared but in the three and five-gaited saddlers there were more than a score of exhibitors.

Amongst the draft horse exhibitors were M. Bassett, Biggs Percheron Horse Company, O. H. Brant, California Polytechnic School, Easton and Ward, Geo. J. Luhrsens, Ruby and Bowers, N. W. Thompson, J. W. Wakefield and E. A. Ward.

In standard breeds there was the Hernet Stock Farm, J. E. Montgomery and James Thompson.

Jacks and mules were exhibited by Burrell and Correy, Frank Hart, F. A. Kingsbury, J. P. Yost.

One string of the winners is shown on page 299. Every animal in this group was a blue ribbon winner.

## Good Silage and Cut Feed Mean More Dairy Profits

Dairying as a business, consists of marketing the crops of the field in their most valuable form—milk and cream.

Profits are directly proportional to the economy used in feeding these crops. The economy in feeding finely cut dry feed is well known. Coarse hay, most of which is nosed out by stock, represents a loss of 20 per cent to 25 per cent of the feeding value of your hay. If it is all cut this coarse hay as well as the fine is entirely consumed as food, making your hay go 20 per cent to 25 per cent farther. With alfalfa hay at \$18.00 per ton, a wastage of 20 per cent of it means a loss of over \$3.50 per ton.

## ACME FEED CUTTER and SILO FILLER

Fills the Silo—Cuts Dry Feed—Makes Alfalfa Meal  
SUBSTANTIALLY BUILT—LIGHT RUNNING—ENORMOUS CAPACITY

ALL STEEL

SAN FRANCISCO

## Field Notes from the Live Stock Men

#### Hollow-Hill Farm reports:

"Interest in Itchen Daisy's May King of Langwater 17349, the Guernsey bull recently brought to California by the Revada Farm at a record price of \$8000, is evidenced in the sale of two of his grand sons by Hollow-Hill Farm, Colton, last week. One of the calves was purchased by Mr. Hanford King of Santa Barbara. This one was out of Imp. Lady Dunmore III 19688, a cow with an official record of 390 pounds butter fat as a three year old, and by King of Hollow-Hill 24876, that wonderful son of Itchen Daisy's May King of Langwater, which was imported to California in his dam, Caroline of Chilmark 24812. The other calf was sold to T. J. Baltimore of Gridley. This one is out of Glen's Cora of Hollow-Hill 48357 which recently made 366.97 pounds of butterfat in 306 days on official test and averaged 5.93 per cent while doing so. It is also by King of Hollow-Hill. Another calf, Queen's King Christie 43752 out of a granddaughter of Imp. Galaxy's Sequel and by King Christie 35039, a grandson of Imp. King of the May 9001, was sold by Hollow-Hill Farm to A. H. Reynolds of Niland, the last week of July.

"According to advices these sales were all due to advertising in the California Cultivator and Hollow-Hill is convinced that it reaches the public."

One of the prizes to be offered at the Glenn County Fair in Orland the latter part of September will be a pedigreed Berkshire pig, donated by Anchorage Farm, the home of the great sire, Star Leader.

#### NAPA COUNTY FAIR

Napa County has done its bit this year in producing more and better than ever before. She now proposes to make a showing that will inspire toward still greater production another year. This is to be done at her county fair which will be held September 22-26 when she expects to exhibit not only things grown and dried and canned, but implements and machinery for still more and better production. The exhibit of machinery and implements promises to be exceptionally fine. We recall having seen at the last state fruit growers' convention a remarkably fine exhibit of a still finer exhibit at the coming fair. Live stock will make another feature. Of course there will be carnival and amusement features.

# High Record Holstein Blood in Southern California

Southern California Holsteins have contributed in a very large way to the splendid performance of the breed in production records, show ring winnings and sales ring prices, and now another great event is scheduled to take place in the southland.

Invading the very heart of the orange stronghold, a big two day sale will be held at McClure Farm, Santa Ana, on Tuesday and Wednesday, October 16-17, during which upwards of 140 head of high class registered Holsteins will be knocked down to the highest bidder.

Seventy head of this number come from the absolute dispersal of Ernest Otto McClure's herd. The McClure herd sire, King Pontiac Netherland Segis, is too well and favorably known among California breeders to require any extended comment. Sixteen of his daughters will be sold in this sale, besides a large number of cows and heifers bred to him.

A. Satterberg of San Jacinto will also disperse his entire herd of 11 head in this sale. Among them is a two year old granddaughter of Rag Apple Korndyke 8th and a young granddaughter of Tilly Alcartra.

P. H. Jarrett of Lancaster disperses a herd of ten females, among them some exceptionally heavy producing cows.

McAlister & Sons are consigning a

choice bunch of heifers to this sale. No single breeding establishment in California has excelled the McAlister organization in turning out typey heifers of splendid growth and fitness.

R. Nadeau, Saugus, consigns a number of well bred cows, good producers and most of them bred to a grandson of King of the Pontiacs.

Aro Farm consigns an unusually well bred lot of females including daughters of such sires as King Pontiac Topsy, Judge Hengerveld De Kol 6th and Juliana King of Rock. And all of the females of breeding age in this consignment are bred to a 26 pound son of Colantha Sir Aaggie.

One of the sensations of the sale will be the offering from Santa Anita Rancho. Their star contribution is King Korndyke Pontiac 20th, son of the state record junior three year old, Miss Valley Mead De Kol Walker, 36.81 pounds butter in seven days, the highest record for any age in the state. Of hardly less importance will be a son of King Morco Alcartra, son of Tilly Alcartra; two sons of King Korndyke Pontiac.

The animals mentioned are only a part of the very attractive ones to be sold in this sale and the quality of the whole sale is such that buyers from all over the Pacific Coast are inquiring for catalogs.

## Veterinary Queries

Answers in this column by Dr. Wm. Petrie, 2714 South Harvard Blvd., Los Angeles, are without charge. For immediate mail answer remit \$1.00. In writing questions give full symptoms or particulars of injury of animal. Unsigned communications receive no attention.

### Chronic Indigestion

I have a mare that has been sick off and on for nearly a year. She was fat before taken sick but never has done well since. Whatever she gains she loses with the next sick spell. When she takes a sick spell she paces about uneasily for a short time, then lies down, tosses about; rolls very little, lies on her side and looks back at her side, then jumps up and paces around again and sometimes goes ravenously for a few mouthfuls of feed. At times she will not eat anything. Sometimes her bowels are loose and sometimes the opposite. The sick spells usually last from four to six days and after three or four days her water comes highly colored. We are now feeding No. 1 wheat hay. She has these spells on alfalfa and barley hay and the longest one she has had was when she was out on alfalfa pasture. Can you kindly tell me the trouble and give me a cure?—Subscriber, Warner Springs.

The food is not digesting properly and in such cases as you describe it is sometimes found later that phosphatic calculi are forming in the bowels. The calculi are stones that form from the lime in the feed; there may be one or many of them. They do not pass on account of their weight and continually grow larger by coat-

ings of phosphate of lime being added to their surface. The condition of the horse may change and the stones stop growing when they may be passed or may finally cause death. The continual spells of colic on all kinds of feed and more especially when on pasture would lead one to think that calculi were forming. You may be able to relieve her by giving the following: Take two ounces of aloin, four ounces of turpentine and two quarts of raw linseed oil. Mix and divide into four doses. Give one dose every seven days. Also get powdered gentian four ounces, powdered nux vomica two ounces and bicarbonate of soda one pound. Mix and give a tablespoon once a day while it lasts. The powders have a tendency to stop the formation of the calculi and may dissolve them. They may pass with the physic; watch for them. Would be glad to hear again from this case.

### Founder

I have a ten year old mare that is foundered in both of her front feet. She appears sore when traveling on hard roads. Please tell me what the remedy is.—Subscriber, Dunsmuir.

Soften and cool the feet by paring the soles thin, then lay on a sponge or some cotton, cover with a piece of thick leather and tack on a shoe. Do not draw the nails too tight. Once or twice a day pour some water under the leather at the heels to keep the sponges wet. A blister at the edge of the hair repeated every two weeks

until four or five blisters have been applied will also help. Give a tablespoon of nitrate of potash in the feed or water once a day for two weeks.

### Diabetes

We have a young horse that will not fatten up as he should and we think the trouble is with the kidneys. He makes water about every half hour while working. Kindly advise us what to do for him. He also slobbers.—Subscriber, Nevada.

Change the feed and do not put him at hard work for a while. Get five pounds of ground flaxseed with the oil left in and twice a day put a handful of it in clean bucket and pour on it a gallon of boiling water. When cool fill the bucket with cold water and let the horse drink it. Also have your druggist prepare two ounces of iodide of potash and enough aqua to make one quart. Give a tablespoon of this with the flaxseed tea twice a day. The slobbering may be due to something wrong with the teeth. Better have the mouth examined by a veterinarian if one is in reach.

### Bloody Milk

Have a three year old cow that freshened with her first calf June 1. She seems to be doing well but about a month ago we noticed blood in the milk from two of the teats. It got worse and formed in clots and would milk out like garget. The milk was all right except the blood. We gave salts. She has a good appetite and is in good order. The udder is not swollen.—Subscriber, Norwalk.

It may be due to something she is getting in the feed, as a weed in the pasture or something in the water. Change the feed and the water too if possible and give her a teaspoon of sulphate of iron in a little feed twice a day for two weeks.

### Sick Hogs

Please inform me what is wrong with my three sick hogs. The symptoms are as follows: They refuse to eat, sleep most of the time and seem stiff and stagger when they walk. Have been so about ten days and remain about the same. — Subscriber, Dos Palos.

Very uncommon for hogs to refuse to eat. Do not know what is wrong. Try giving them a physic of salts. Give each one two tablespoons of epsom salts and one of common salt. Dissolve in half a pint of hot water and when cool give as a drench. Tie a small rope around the upper jaw and pull up on it then you can pour the medicine down without much trouble.

### CIRUELA JOSEPHUS

The Cultivator erred last week in giving the production record of the granddam of Ciruela Josephus, Aralia De Kol. This cow has a record at 11 years old of 28,090 pounds of milk and 1142.32 pounds of butter. Ciruela Josephus is owned by A. M. Bibens.

## B REEDERS EST OOKS

Two men, prominent in two great world industries, dairying and swine breeding, have each written a book giving the best information they have from years of actual experience, from many hours of study and careful reading and from meeting hundreds of dairymen and breeders like themselves.

### You Should Have Both Books

This book, entitled "Forty Years' Experience of a Practical Hog Man," by A. J. Lovejoy, is a neatly bound book of 170 pages that is what its name implies and more. It contains information on all the general subjects relating to swine breeding and feeding and goes into careful analysis and minute detail of many related subjects.

### Van Pelt's Cow Book

is another volume that thousands of dairymen have read and reread and studied because of the very thorough manner in which the essential knowledge of successful dairying is set forth. This book is profusely illustrated, printed on fine quality of paper and will be a valuable possession in the hands of any one who owns or handles cows.

Either book may be secured by sending \$1.25 which will pay for the book and one year's subscription to California Cultivator.

Both books may be secured by sending \$2.50, which will pay for both and two years' subscription, new or renewal, to California Cultivator.

Address all orders to California Cultivator, 115-117 N. Broadway, Los Angeles.

## It's Natural for a Hog to Wallow

Here's a good thing to do: Provide a wallow close to the feeding grounds to which add Dr. Hess Dip and Disinfectant. As the hogs pass back and forth from the wallow to the feed trough, the **DIP** will kill the lice and cleanse the skin, while the **DRIP** will destroy the disease germs and the worms that pollute the ground. That will mean a clean, healthy skin, freedom from lice, a safeguard against disease and larger, better porkers

# Breed Leaders

Every breed of live stock has its outstanding character the same as the human kind. A great dairy cow has proved her ability to produce anywhere up to 15 tons of milk annually; the trotting horse has secured his record around two minutes; the beefmaker has shown his ability to make the least amount of feed into the greatest amount of food; swine, sheep and others of the live stock family have shown themselves great characters. In addition—and here is where their worth is proven—these animals can transmit their productive power to their offspring.

Beginning with the issue of August 4 the Cultivator gave an account of Pietertje Bloom of the university farm dairy herd. Some things she has done and more that her daughters have done were chronicled. She was a most worthy leader in this series of articles. Others of her kind follow. More of the "handsome is as handsome does" type of animals will be given in the columns of the Cultivator during the next few months.

## MODEL MAJOR

**T**HE show ring life of a hog is necessarily a short one, but the year 1916 was a year of triumphs for Model Major 224841, owned by Hale I. Marsh of Modesto. Model Major is

was first and grand champion at the Modesto Live Stock Exposition, first grand champion, winner of sweepstakes over all breeds, and first as head of prize herd at Fresno.

His litters run from nine to fifteen strong, active, easy feeding pigs. He

Model Major

a splendid type of Poland-China, long, deep, wide, smooth. The judge picked him for first prize aged boar at the Sacramento state fair in 1916. He

was bred by Wm. Smiley & Sons of Wisconsin. His sire was Major Hadley, his grandsire Major Bob. His dam was Model Gem 10th, his granddam Hadley Girl.

## Meeting of California Poland-China Breeders

Written for California Cultivator By R. H. Whitten

**T**HE annual election of officers and banquet of the California Poland-China Breeders' Association was held at Sacramento, Wednesday evening, September 12. There was a large attendance and enthusiasm was at high mark.

The following officers were elected for the ensuing year: President, W. Bernstein; vice-president, O. L. Linn; secretary-treasurer, R. H. Whitten; directors, the above and M. Bassett, H. I. Marsh, C. R. Hanna, Nate Hauck.

Twenty herds were nominated for the 1918 show, thus insuring the future of the American Poland-China Record Association, with cash prizes amounting to \$600. The guest of the occasion was Ray Davis, field secretary of the American Record Association, who gave an entertaining and in-

structive blackboard talk on matters of interest to the breeders.

It was decided to ask the members for contributions to carry on the work of the association. The response was generous, and it is expected that after the absent members are heard from the fund will amount to over \$1000.

The next meeting of the association will be held at Hanford, October 18, at the sale of the Kings County Breeders. All members are urged to be present as matters of great importance will be discussed.

The association is in a most flourishing condition, yet the support of every Poland-China breeder in the state is needed, and those who are not already members are urged to send \$1.00 for a year's membership to Secretary R. H. Whitten, 519 Marsh-Strong Building, Los Angeles.

## Annual Meeting of the California Holstein-Friesian Association

The annual meeting of the California Holstein-Friesian Association was held in the dairy barn, California State Fair grounds, Sacramento, on the evening of September 11.

At the business meeting the entire board of directors was unanimously re-elected. At the organization meeting Fred W. Kiesel was reelected president, De Lancey Lewis of San Jose was elected first vice-president, H. V. Bridgford, Knightsen, second vice-president, and C. L. Hughes was reelected secretary-treasurer.

A resolution fully endorsing the efforts of the various milk producers' associations throughout the state was unanimously adopted.

A resolution was adopted conveying high appreciation of the many courtesies extended by the directors of the state agricultural society to exhibitors of Holstein cattle and the splendid co-

operation given in the conduct of sales of Holsteins. The whole-hearted efforts of Secretary Charles W. Paine of the state agricultural society were especially commended.

Following the business meeting President John Perry of the state agricultural society, Edwin Voorhies of the university farm, Charles W. Paine, secretary of the state agricultural society, made interesting addresses.

The remainder of the evening was given over to general discussion of various subjects, during which the Holstein Breeders' Guaranty Sale to be held at Sacramento in December was endorsed.

The association has shown a rapid growth in membership during the past year and it is hoped to double the membership during the coming year. To that end the members present pledged themselves to an active campaign to secure new members. — C. L. Hughes, Secretary.

# THE BEST LINIMENT

OR PAIN KILLER FOR THE HUMAN BODY

## Gombault's Caustic Balsam

IT HAS NO EQUAL

For the Human Body

We would say to all who buy it that it does not contain a particle of poisonous substance and therefore no harm can result from its external use. Persistent, thorough use will cure many old or chronic ailments and it can be used on any case that requires an outward application with perfect safety.

# Who's Who

With the issue of August 11 the Cultivator started its series of "Who's Who" articles to bring before its readers some of the livestock producers of California who are responsible for the large development of the industry. Where did they come from and how long have they been engaged in California development, also how do they look, so pencil and camera are to be used, and some homely, everyday photographs and notes regarding them will bring us closer together. Bear in mind we say "homely photographs" and not photographs of homely people. The idea we wish to convey is that so far as possible we will secure photographs in everyday surroundings at the homes of the livestock producers.

Other sketches and portraits will appear in the next and following weeks.

Written for California Cultivator By F. F. Stonerod

## E. B. McFARLAND

**T**HE honor of establishing the first purebred Ayrshire herd of cattle in California must go to Bailey McFarland. His fondness for the breed and his faith in its future in this state influenced him in the selection of a foundation herd about five years ago. He got some of his best stock from J. W. Clise, the noted Seattle breeder, who owned Peter Pan, Lily of Willowmoor Farms, and other animals with a world reputation. The first seven head he purchased came from the McMillan herd in Quebec. Then he got 19 head from Clise, and later on at the world's fair at San Francisco he bought seven more.

During 1914 and 1915, Mr. McFarland was associated with Wm. Caruthers in the Berkshire business, but has since closed out his Berkshire holdings and has devoted his entire time to his cattle.

"Mac," as he is familiarly known by the stock men, likes the show game. He will fit a full herd each year and take along several head in addition for, be it known, he is a first class salesman as evidenced by the fact you can find Ayrshire cattle from his herd in many parts of the Pacific coast.

Two of his biggest deals were the sale of 20 head to an Hawaiian breeder last winter and the recent sale of 30 head to the state industrial school at Ione. Ayrshire and McFarland go well together as they are both Scotch, and if the reader doubts that statement let him visit the Steybrae farm situated on top of a mountain over-

looking the Spring Valley Water concession on one side and the Pacific Ocean on the other. The hills are unusually steep and, as Mac says, no other dairy breed of cattle could subsist and produce so liberally under these harsh conditions as the Ayr-

E. B. McFarland

shire. Steybrae is a beautiful country estate and the owner is justly proud of it. He was born in California, is married, and has a family consisting of two daughters and a lusty young son.

When in the "City" Mr. MacFarland enjoys a few hours at the club and a visit with his father, who has offices in the Spreckels building, and is one of the pioneers in San Francisco in his line.

## Creamery Operators Convention

**C**ALIFORNIA Creamery Operators' Association will hold its eighteenth annual convention at Petaluma, October 4-6. There will be a butter scoring contest, entries due October 1. Buttermakers entering this scoring contest will be entitled to compete for a special cash prize of \$10 for contestant coming closest to judge's score on a given number of entries. Scoring will be under supervision of the state university at 10 o'clock, on the morning of Thursday, October 4. In the afternoon Pres. Hopkins will speak. At 8 p. m. there will be addresses on Creamery Refriger-

eration by Thos. Marshall; Creamery By-Products, G. E. Frevert. Friday, 8 a. m., buttermakers' scoring contest, auto trip; 2:30 p. m., address, S. H. Greene; Silos and Silage, Chas. Crane; 8 p. m., Production of Pure Milk and Cream, Dr. Wm. C. Hassler; Live Stock and Labor Problem, D. O. Lively; Cow Testing, H. J. Baade. Saturday, 9:30 a. m., address, Prof. C. F. Doane, United States cheese specialist; Butter vs. Other Fats, E. H. Webster; address, Prof. Van Norman; 2 p. m. reports of committees, election of officers, etc. In the evening the Petaluma chamber of commerce will act as hosts at a banquet. Prizes will be announced at this time.

## California Swine Breeders Meet

Written for California Cultivator By C. A. Briggs

An important meeting of the State Swine Breeders' Association was held at Sacramento on Thursday evening, September 13. About 150 breeders and their friends partook of a banquet which was followed by speeches of a high character. The address of D. O. Lively advocating the establishment of central markets at San Francisco and Los Angeles was well received.

President C. B. Cunningham presented the question of swine shows for the Coast along the lines of the great Eastern shows. The idea of two shows and possibly three, (at San Francisco, Los Angeles and some point in Oregon or Washington) met with the hearty ap-

proval of speakers representing all the leading breeds. Dues for the ensuing year were collected. The meeting was enthusiastic, largely attended and every one present felt that the good work of the association in the past would be greatly enlarged and be more successful.

### MAYBE

The teacher had told the class that Milton, the poet, was blind.

The next day she asked if any of them could remember what Milton's great affliction was.

"Yes'm," replied one boy. "He was a poet."

## Egg Laying Contest at Mountain Grove

By C. T. Patterson, Director

**S**IXTH National Egg Laying Contest, held at Mountain Grove under the direction of the Missouri College of Agriculture, has made a gain of 35 eggs per hen over the first contest held at this place.

The Bureau of Labor Statistics census 1910, the year before the contests began, shows 41,913,210 fowls raised, of which we may estimate that 20,000,000 were females. The same census shows that less than 70 eggs were produced per hen that year.

If the 20,000,000 hens of Missouri should make the same gain as the contest, 35 eggs each, there would be 700,000,000 more eggs produced in the state per year, and at 2½ cents each, would increase the value of eggs \$17,500,000.

It is easier to increase the production of the average hen in Missouri from 70 to 105 eggs than to increase the average in the contest from 135 to 170 eggs each. This increase in egg production is easily possible if the breeders follow the same rule used at the experiment station, which is, "Supply proper conditions for egg production." Heredity and environment are the two factors which determine egg production. Heredity is all characters transmitted from the parent to the offspring while environment includes all things which affect the life of the bird, not included under heredity.

The life of a fowl may be divided into three parts. First, the embryonic stage, or life in the egg; second, the growing stage, which is from the time it hatches till it is mature; and third, the nature or reproductive stage.

In as much as the pullets are usually mature when they reach the contest we have no influence on heredity or the environment during the embryonic and developing stages. Therefore, environment during the reproductive stage is all the influence which can be exerted during an egg laying contest. Experiments show that environment is greatly responsible for the increased egg production.

Many think the number of eggs a hen can produce is fixed by the number of ovules or miniature yolks in the ovary, but a count of the ovules in the ovaries of a number of hens does not reveal any relation between the number of ovules in the ovary and the number of eggs produced, the numbers ranging from 2000 to 4000 as seen with a small hand lens. This is more than any hen ever produced during her life. A point of greater importance is for the hen to be able and inclined to develop the ovules into eggs.

In as much as the hen has many times as many ovules as she ever manufactures into eggs, the number of ovules is not a limiting factor in egg production. This being the case, it is not necessary for anyone to wait till next year or the next to get the increase which comes through environment, but can increase the egg production of his present flock by supplying proper conditions, then make a still greater increase later on through breeding.

### The Contest

The hens in the Sixth National Egg Laying Contest have made a very high record to date, having produced 157.6 eggs per hen in ten months.

During August 4305 eggs were produced, or an average of 14.8 each for the month.

Seven pens representing seven varieties occupy the five highest places for August. They are as follows:

White Plymouth Rocks, Missouri, 122 eggs; S. C. W. Leghorns, Pennsylvania, 113; S. C. Brown Leghorns, Missouri, 108; White Wyandottes, Missouri, 97; S. C. White Minorcas, Missouri, 97; S. C. R. I. Whites, Michigan, 96; Anconas, Missouri, 96.

All hens in the five highest places to date have averaged 225 eggs or more in ten months. They are as follows: White Wyandotte, Missouri, 243 eggs; S. C. White Leghorn, Missouri, 243; Barred Rock, Missouri, 239; White Wyandotte, Missouri, 228; S. C. R. I. White, Michigan, 227; White Wyandotte, Missouri, 225.

The ten highest pens to date are as follows: White Wyandottes, Missouri, 1066 eggs; R. C. R. I. Whites, New Jersey, 997; S. C. White Leghorns, Missouri, 990; S. C. White Leghorns, Pennsylvania, 983; White Rocks, Missouri, 956; S. C. R. I. Whites, Michigan, 901; S. C. White Leghorns, New Jersey, 900; Barred Rocks, Missouri, 894; S. C. Reds, Iowa, 982; White Rocks, Idaho, 872.

## Poultry Awards at the State Fair

**P**OULTRY classes were judged by R. V. Moore of California and Will Purdy of Washington. Both of these judges were unqualified in their commendation of California quality, and especially of 1917 quality. Judge Moore, who has been at state fairs for years, said this year's showing surpassed that of all former years in both as to breeding and quantity.

Awards in utility classes are as follows:

### AMERICAN CLASS

Barred Plymouth Rocks—Ck. 1, Mr. and Mrs. C. W. Presher; 2, Geo. D. Lubben; 3, Ed Ellis. Ckl. 1, Cameron Bros.; 2, Geo. D. Lubben; 3, Ed Ellis. Hen 1, 2, Cameron Bros. Pullets, 1, 2, 3; pen, 1, 2, Cameron Bros. Ckl. Pen 1, Mr. and Mrs. C. W. Presher; 2, Cameron Bros.; 3, Ed Ellis. Pullet Pen 1, Cameron Bros.

## Science Says Buttermilk

Bulletin 162, just issued by the Department of Agriculture, states that Buttermilk is the only preventative of White Diarrhea. It has been proven that many birds apparently in perfect health have these germs in their system and that they are transmittable to their progeny. Science has discovered that the Lactic Acid Bacilli of Buttermilk kills these poison germs. Write to Berkeley for this important bulletin, free.

The Dry Buttermilk in GLOBE A-1 BUTTERMILK MASH contains 10,000 live Lactic Acid Bacteria to the cubic centimeter.

Globe A-1 Buttermilk Mash is a high protein feed, free from any filler.

Globe A-1 Buttermilk Mash will prevent bowel troubles, keep your flock in glowing health, produce more eggs to market, better eggs to hatch.

Costs no more than non-buttermilk mash.

Satisfaction or Money Back.

### GEESE

Gray African Geese—All awards, The Ferris Ranch.

Toulouse Geese—All awards, Wm. A. French.

Embsen Geese—All awards, Mrs. John G. Mee.

### STORRS EGG LAYING CONTEST

Storrs, Connecticut, August 31, 1917. —Report for the forty-third week ending August 29, 1917.

The light breeds are still out-laying the heavy American breeds in the laying contest at Storrs. During the forty-third week the 55 pens of heavy birds, Rocks, Reds and Wyandottes, laid a total of 1673 eggs or an average of 43.5 per cent. The 45 pens of light birds laid 1655 eggs or an average of 52.5 per cent. The total production for the week amounted to 3328 eggs or 144 less than for the previous week. The problem confronting the management now is not how to increase production, but rather how to delay as long as possible the drop that is sure to come incident with moulting. When a bird continues to lay until after September 1, it is more than a good guess that she has been a high producer for the year. Consequently if we cull out all birds which have stopped laying before September 1, we automatically get rid of the poor individuals. Not only this, but we also automatically increase the average production of the flock. The poultrymen who have not already culled their flocks should do so at once.

The three best pens in each of the principal varieties are as follows:

#### Barred Plymouth Rocks

Fairfield's Poultry Farms, 1805; Merritt M. Clark, 1609; Michigan Poultry Farm, 1543.

#### White Wyandottes

Merrythought Farm, 1599; Obed G. Knight, 1476; Jay H. Ernisse, 1467.

#### Rhode Island Reds

Allan's Hard to Beat Reds, 1668; Hillview Poultry Farm, 1560; Pequot Poultry Farm, 1541.

#### White Leghorns

A. P. Robinson, 1922; J. O. LeFevre, 1754; Hilltop Poultry Yards, 1744.

#### Miscellaneous

Cloyes & Sullivan, (Buff Wyandottes) 1601; Holliston Hill P. Farm, (White Rocks) 1521; Obed G. Knight, (White Orpingtons), 1446.

## Household Department

### ALFALFA

What makes the landscape look so fair;  
What blossoms bright perfume the air;  
What plant repays the farmer's toil,  
And will enrich the worn-out soil?  
Alfalfa!

What is the crop that always pays,  
And will mature in forty days;  
Resisting drought, the frost and heat,  
Whose roots reach down one hundred feet?  
Alfalfa!

What grows in loam, clay and sand;  
What lifts the mortgage off the land;  
What crop is cut six times a year,  
And no foul weeds in it appear?  
Alfalfa!

What makes the swine so healthy feel,  
And never raise a hungry squeal;  
The wholesome food that never fails  
To put three curls into their tails?  
Alfalfa!

What makes all other stock look nice,  
And bring the highest market price;  
What fills the milk pails; feeds the calf,  
And makes the old cow almost laugh?  
Alfalfa!

—Author Unknown.

### MAGIC RAIMENT

By James Ravenscroft in Youth's Companion

**W**ELL! Since when did you get so coy that a common codger of a man can't even enjoy your company for a few minutes? What's the matter with you?"

Braxton started toward her again, but Brindle tossed her head in a disdainful manner, and again galloped away.

Braxton set the milk-pail down, and pondered. It was about his tenth attempt that evening to induce Brindle to let him milk her.

"Tan your handsome hide!" he grumbled. "And I've been feeding you night and morning ever since I got

you, too. Yet you have the nerve now to pretend that you don't know me well enough to let me milk you!"

It was the first time that circumstances had made it necessary for him to milk the cow. When Braxton Randall and his young wife, Frankie, had come from Virginia to Southern California two years before, and bought on time a little farm in a corner of the foothills, the heavy expense of making the payments had compelled Braxton to hire out as a hand on the McCrory ranch. McCrory's, or Mack's, as it was called by everybody, was near enough so that Braxton could come home at night, and he was always at home on Sunday, but never had he milked Brindle. Frankie, to help him all she could, had included that duty in her household chores.

"I might as well do it on Sundays, too, Braxton," she had said, cheerfully, "for you have your hands full looking after the place when you are here."

So it had come about that Brindle, their first chattel and the mainstay of their prosperity, had been milked by the hand of woman only.

But now Frankie had been taken suddenly sick. She was so ill that Braxton had to go to Alhambra for a doctor, and then ask Mack to let him off so that he could nurse her.

Braxton had prepared supper very successfully, even to the making of some chicken broth, which Frankie praised liberally, although she partook of it sparingly. He was get-

ting along well enough till he came to the milking. Brindle had eyed him with apparent misgiving when he approached her, for she could not recall that he had ever carried feed to her in a tin pail. She smelled of him suspiciously, and when he put out his hand with a conciliatory "So," she wheeled and ran. It was plain that she either mistrusted him or objected to being milked by one of the male sex.

"Now what am I going to do?" Braxton asked himself. "We need the milk, and there's not a woman nearer than two miles who can milk a cow. Guess I'll have to let it go to-night."

"Moo!" remarked Brindle from a safe distance, as if commending his decision.

Braxton started back to the house; but he had taken only a few steps when he stopped. An idea had come to him of a way to solve the milking problem. He looked back at Brindle, still mooing and grinned.

"You wait, old lady, and see if I don't fool you," he said.

He went into the house, and without saying anything to Frankie, he found the gingham wrapper that she wore when she worked in the garden and did the milking. He managed to squeeze into it, although the sleeves were a tight fit, and there was a yawning gap where it should have buttoned down the back.

"I won't disturb her by letting her see my back," he thought, with a smile.

He smoothed the garment down the front, and chuckled when he saw his coarse working shoes protruding beneath the hem.

"If you want a woman to milk you, why, you'll have to have your way, Brindle, and that's all there is to it!" he declared.

"Anything the matter, Braxton?" came a faint call from the bedroom.

"No, Frankie—not yet," he answered. "You want anything?"

"No-o-o-o."

"I'll soon be done," and he hurried out—and then hurried back.

"What do you think of that?" he muttered to himself. "Put on the wrapper, and then forgot and left my hat on. That would make a cow laugh, for sure."

He rummaged quietly till he found the sunbonnet that Frankie wore when she worked outdoors. He put it on, and clumsily tied the strings under his chin. "Now," he remarked, "I ought to look feminine enough to satisfy the most particular cow."

Brindle saw him before he reached the gate of the lot, and came trotting to meet him.

"Well—well—" Braxton began, and stopped. He did not know what to say. He had started out merely to play a trick on the cow, if he could, and now he was surprised, almost awed, at the magical effect that the wrapper and the old sunbonnet produced on her.

He passed through the gate, and paused. He did not have to go a step farther. With deep-throated murmurings, Brindle trotted up and brushed her moist nose along the sleeve of the wrapper, as she joyously identified it in loud, satisfied whiffs. Then out came a rasping but loving tongue, and caressed his hand.

Braxton was afraid to speak, lest his voice should betray his stratagem. What he was thinking was that it would be deceiving a child to destroy Brindle's trust in the old wrapper and sunbonnet.

He held the milk-pail in front of him, and Brindle at once swung round with her side to him, and obligingly set her leg back.

In silence Braxton milked her, but something new and fine was going on in his mind. He was conscious of an inner hurt, poignant but precious, that at first he could not analyze. When he had finished, he patted Brindle affectionately. Her response was a grateful gurgle.

What Braxton had suddenly seen was Frankie's two lonely years on the little ranch and his neglect of her. He had not meant to neglect her; he had only been very busy—in fact, overworked. Still, he knew that at times he could have arranged differently, so that the dreary monotony of her life could have been broken occasionally. She had worked early and late, doing much more than she should have done, unceasingly enthusiastic in the task of paying for the new home. Not once had she complained, but that did not alter the case.

Continued next week.

### SOUPS THAT NOURISH

**W**E note in the Good Thrift Series of the United States department of agriculture information regarding the value of soup in the diet with economical recipes for its preparation. Where there are growing children or hungry men this valuable article of diet should appear on the menu at least once each day.

"A generous serving of thick meat soup or fish chowder yields more energy than an ordinary portion of roast beef, and even a moderate helping of vegetable milk soup usually furnishes fully as much body fuel as a moderate sized-rib chop of lamb.

There are other things to be considered besides energy in computing value of different foods. One is the amount of protein, without which the body cannot build and maintain its tissues. Meat and milk soups contribute some of the needed protein. Meat, poultry, fish, eggs, milk, cheese, dried peas, beans, and other legumes are the common foods in which protein is most abundant, though it also appears in fair amounts in the cereal foods.

#### Dried Fish Chowder

Half pound salt fish, 4 cups potatoes, cut in small pieces, 2 ounces salt pork, 1 small onion, chopped, 4 cups skim milk, 4 ounces crackers.

Salt codfish, smoked halibut, or other dried fish may be used in this chowder. Pick over and shred the fish, holding it under lukewarm water. Let it soak while the other ingredients of the dish are being prepared. Cut the pork in small pieces and fry it with the onion until both are a delicate brown, add the potatoes cover with water, and cook until the potatoes are soft. Add the milk and fish and reheat. Salt, if necessary. It is well to allow the crackers to soak in the milk while the potatoes are being cooked, then remove them and finally add to the chowder just before serving.

#### Milk and Cheese Soup

Three cups milk, or part milk, 2½ tablespoons flour, 1 cup grated cheese, salt and paprika.

Thicken the milk with the flour cooking thoroughly. This is best done in a double boiler, with frequent stirrings. When ready to serve, add the cheese and the seasoning.

#### Mixed Vegetable Soup

Three quarts water, 1 quart shred-

## The test of to-day is the Pocket Book test

Today home management is on a war, not a peace basis. "How much am I getting in nutriment for what I pay?" is the home manager's problem.

In peace or war Ghirardelli's Ground Chocolate makes good as an economical and appealing food. A blend of pure cocoa and sugar, two of the most nourishing foods known, it supplies energy and resupplies waste tissue at lowest cost. Use it freely as a food and you will practice food conservation.

**Ghirardelli's**  
Ground Chocolate

comes in ½-lb., 1-lb., and 3-lb. cans.  
Order from your grocer.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH.

## HOW TO ORDER PATTERNS

Write your name and address plainly in full, give correct number and size of each pattern you want, and send ten cents in coin or (1 or 2c) stamps for each number. In order to furnish our readers with the very latest New York City styles, all pattern orders are filled in New York City. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

Pattern Department  
California Cultivator  
Los Angeles

ded cabbage, ½ pint minced carrot, 1 pint sliced potato, ½ pint minced turnip, ½ pint minced onion, 1 leek, 2 tomatoes, 2 tablespoons minced celery, 2 tablespoons butter or drippings, 2 tablespoons green pepper, 3 teaspoons salt, ½ teaspoon pepper.

Have the water boiling hard in a stewpan and add all the vegetables and tomatoes. Boil rapidly for ten minutes, then draw back where it will boil gently for one hour. At the end of this time add the other ingredients and cook one hour longer. Have the cover partially off the stewpan during the entire cooking. This soup may be varied by using different kinds of vegetables.

## WHY BABIES WAKE AT NIGHT

Dr. Sadler of Utah gives in the Utah Farmer some common sense hints on the care of the baby which are particularly valuable during warm weather.

### Lack of Fresh Air

Babies cannot sleep peacefully in a hot, stuffy room, or in a room filled with the fumes of an oil lamp turned low. A crying, fretful baby often quiets down as if by magic, providing he is not hungry and the diaper is dry, when taken into a cool room with fresh air.

### Clothes and Bedding

If baby's neck is warm and moist you may know that he is too warm. If the diaper is wet it should be changed at once. One of the worst habits a baby can possibly get into is to become so accustomed to a wet diaper that it does not annoy him.

### The Food

Too little, too much, or the wrong kind of food will disturb baby's sleep. Many mothers who sleep near their babies nurse them every time they wake up, and this soon becomes one of the biggest causes of disturbed sleep.

### Spoiling

A lighted nursery or bedroom, rocking to sleep, jolting the carriage over a door sill or up and down, the habit of picking baby up the moment he cries, late romplings—any and all of these may disturb sleep, as well as unsettle the tender nervous system of the child, thus laying the foundation for future nervousness, neurasthenia, and possibly hysteria.

### Reflex Causes

Wakefulness is sometimes due to reflex nervous causes such as the need for circumcision, or the presence of adenoids, enlarged tonsils, or worms. If baby has to breathe through his mouth then you may suspect adenoids.

## AN ATTRACTIVE HOME

A Colorado writer, in commenting on the unattractiveness of many homes in his section, quotes a remark recently made to him by a newcomer. This newcomer said: "Perhaps you have lived in this region long enough to understand why it is that so many farmers who are prosperous enough to own an expensive automobile are satisfied to live in such homely little shacks of houses with such unattractive surroundings."

I wonder if he would make the same comment on some of our California communities?

Our Colorado friend adds: "When it becomes more generally known how much may be done by the judicious planting of trees, shrubs and vines, and the cleaning up and proper disposal of rubbish, weeds and discarded farm machinery our homes will be-

come not only more inviting in appearance but will attract the best buyers when sold. It is not necessary to build an oversized, expensive, ornate house to realize the truest home qualities. Much better results often

follow the planning and carrying out of a well designed, inexpensive planting plan, with suitable flowering plants, vines, shrubs and trees."

"Fools burn trash off their fields." It was a wise man who said that.

## "The Range with a Reputation"

## Majestic means "strict economy"

**Economy in fuel**—its heat-tight construction requires less fuel to maintain perfect baking temperature.

**Economy in food**—its scientific oven bakes right always—prevents food waste.

**Economy in service**—Its unbreakable malleable frame and rust-resisting charcoal-iron body save repairs and make the Majestic outlast three ordinary ranges.

Do you know that now much less crops will buy a Majestic than a few years ago? Less than 2 acres of corn pays for it—think how little seed and labor you give for an article that means so much to the whole family. One quality; many styles and sizes. There is a Majestic dealer in every county of 42 States. Send for free booklet and name of dealer near you.

Majestic Mfg. Co., Dept. 203 St. Louis, Mo.

U.S. Government orders over 150 carloads of Majestics —because the Army must have the best range service

## MORE BETTER LIGHT

Install a PRIVATE GENERATING PLANT and have ELECTRICITY FOR LIGHT AND POWER. The Uni-Lectric system generates the standard 110-volt direct current, which will operate from 1 to 50 lights. It will run your sewing machine, electric iron, vacuum cleaner, churn, washing machine, etc.

### NO BATTERIES---NO SWITCHBOARD

High speed gasoline motor, generator and automatic governor, all complete. Uses standard lamps and fixtures. Can be used for one or more houses.

# Questions and Answers

ANSWERS BY EDITOR AND STAFF

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

## Weevils in Beans

What can I do to keep worms out of dry beans?—Subscriber, Santa Cruz.

See answer to same question in last week's Cultivator on Page 281, "Keeping Beans."

## Fattening Turkeys

Would like to fatten 11 young and six last year's turkeys for Thanksgiving. Would you kindly advise me what is the best and cheapest way to fatten them? We have our own corn

on the ranch. Would they have to be penned up or not and for how long?—Subscriber, Santa Barbara.

Whole corn is the best of fattening feeds for turkeys, but it must be thoroughly dry. Half ripened corn is dangerous. If you have not been feeding corn begin gradually. It is better not to confine the birds. Just let them run, and do not try to stuff them with the corn. Keep them hungry. You can't fatten a turkey or a chicken either that is "off its feed" from overeating.—J. A. K.

## Inflammation of Crop

A deadly disease has attacked our poultry, young roosters, and best laying hens. They sit on the roost with heads hanging very low as if they would lose their hold of the roost. Then they go to the ground, move about a little with head in the dirt and finally die. One hen would give a sharp cough like roup (didn't notice this in any others); but there is no roup. Bowels not loose. They have been fed the mash from feed store, mixed with green feed, and sometimes dry leaves from alfalfa hay. They have milk. They have had access to the bone hard dry barley in the barley hay for horses, lots of grain in the barley bales, and it goes out in the manure which the hens also scratch over.

A friend sometime ago fed such barley to his rabbits, throwing the leavings over in the chicken pen, and he lost fowls in this same way. The trouble stopped when he threw no more barley over to the fowls. We have shut our hens up from the barley, hoping they may be saved if that is the trouble. We opened one laying hen—nothing much in crop but a few grains of barley, foul smelling.—Subscriber, Burbank.

Your hens have inflammation of the crop, due probably to the irritating effect of the bearded barley. Too much dry barley frequently has this effect. If you had steamed or soaked or sprouted the barley it would have been more easily digested. What is called "scoured" barley, i. e. barley with beards removed, costs a little more than the seed barley, but is more wholesome. You were right in putting the hens where they could not reach the barley. The next thing is to get rid of any that may be irritating their crops and intestines. If the crops seem distended their contents may be removed by holding the bird with head down and gently pressing and working at the contents of the crop till they run out of the mouth. When the crop is nearly empty make the bird swallow a couple of tablespoons of warm water and repeat the massage. When the crop is quite empty give a scant teaspoon of castor oil. It would be a good plan to give all the birds, both sick and well, a dose of Epsom salts. Dissolve a half

teaspoon of salts for each bird in a small quantity of water and moisten some of the dry mash with the water. If more moisture is needed use sour milk. Mix just what the birds will eat up quickly, and give when they are quite hungry. This will help to cleanse the system and may keep some birds which do not as yet show signs of illness from developing it. Feed plenty of greens and sour milk and give no irritating food such as barley or oats till the birds have entirely recovered.—J. A. K.

## When Casabas are Ripe

When is the best time to pick casabas, the winter kind? Do you leave them on the vine until vines die or pick them when they turn color? What is the best way to keep them through the winter?—Subscriber, El Toro.

Without referring to the color as each variety of casaba has a different color, or shade, the ripeness can be ascertained by the complexion. The melon is ripe when its complexion is clear, that is, the skin attains a certain transparency that is never present in a green melon. To the slight pressure of the fingers the melon should be firm, but a smoothness should be noticeable, and as the fingers are drawn over the melon there should be slight resistance. The knack of picking a melon or casaba when it is ripe is only attained by practice. Casabas ripen before the vines die and should be picked before the vines begin to die, for the dying vine takes away the juices and crispness of the melon. To keep casabas put them in a well ventilated cool place, placing them so that they do not touch each other. Packing in straw is very satisfactory.—D. F. R.

## Disease of Fig

I send leaf from fig tree which seems to be affected with some disease. Is this a fungous trouble or is it simply a physical condition caused perhaps by overirrigation in the fall, injury by frost, or dieback?—Subscriber, Los Angeles.

This question was referred to the pathological laboratory of the University of California. Mr. J. T. Barrett writes: "The fig leaf bears a saprophytic fungus in abundance but there are no evidences of any organism which would seem to be responsible for the trouble you describe. I should be inclined to suspect that the difficulty is in some of the branches which are bearing these leaves. There is a disease of fig trees which has come to our attention the last two years which attacks the bark of the smaller branches, thus causing the death of the foliage and I thought perhaps this might be similar."

## Heading Back Young Walnuts

Young Placentia walnut trees grow here very rapidly forming branches which are long and slender and easily bent by the wind or their own weight. Will you kindly inform me if it is advisable to cut back such branches in order to stiffen them and make the tree more sturdy?—Subscriber, Spadra.

It is never advisable to head back young growth on walnut trees. If done early in the season branches will be thrown out which are not well united with the branch from which they grow or the branch will sometimes die back a considerable distance. If the heading back is done late in the season a new growth is likely to be made which will not fully mature before the cold weather and is often winter killed even in localities having only light frosts. The safest method is to pinch out the terminal bud of any shoots which

may be growing too fast. This will often stop further growth in length, if done as late as August, and cause the wood to thicken and harden before cold weather. Branches which have already grown too long and are in danger of breaking in the winds or from their own weight should be tied to a stake high enough to give them the desired angle, or sometimes they can be tied to the main stem of the tree but always be sure there is plenty of room for the growth of the branches inside the loops made in tying.—J. B. N.

## WEEKLY MARKET REVIEW OF FRUITS AND VEGETABLES

Jobbing prices and shipments for the United States for the period September 4-11. Reported by United States bureau of markets.

### Apples

Virginia, Illinois and New York have the markets well supplied with barreled apples this past week, while California has shipped a considerable supply of boxed stock. Wealths have been jobbing at \$4.50 to \$6.00 per barrel and Duchess at \$3.50 to \$6.00. New York has shipped only 83 cars to date, which is only about one-third as many as up to the corresponding time last year. Illinois, however, with a movement of 566 cars to date, has shipped about three times as many as up to the same time last year.

### Other Fruits and Vegetables

The supply of grapes was slightly heavier the past week. California still leads in shipments, although Iowa, Kansas, Missouri, and New York have been factors this past week. Grapes were reported as selling at 27 cents per six pound basket f. o. b. Council Bluffs, Iowa, yesterday.

Pear shipments from California and Oregon, which are the two heaviest shipping points at present, have been considerably lighter this past week. Illinois, Michigan and New York are now shipping in large quantities. Pears are selling at \$1.35 to \$1.40 per 50-pound box, f. o. b. Washington. This is about the same price as a week ago. Bartlett are bringing \$2.00 per bushel, f. o. b. Benton Harbor, Michigan.

Onion shipments have been slightly heavier this past week. New York, Massachusetts, California and Ohio are all moving a considerable quantity. New Yorks are selling at \$1.00 to \$1.25 per bushel, f. o. b.

## "FARM THE FARM UNDER THE FARM"

**A** MISSOURI farm paper editor once coined this expressive phrase, "Farm the Farm under Your Farm." Thousands of farmers who had been unmoved by long and learned articles on "Deep Tilling" were stirred to action by this homely and forceful expression. Have you ever stopped to think that the repeated turning back and forth of the top soil on your farm has left just below the usual plowing level a deposit of richness that needs only to be brought up where it can nourish your plant roots to greatly increase your crop yield?

In reality then there is a "Farm Under Your Farm"—a farm richer than the one you have been working. But the problem is how are you going to get down to it. Plow deeper by means of a farm tractor—that is the answer. If you have not had an opportunity to judge for yourself of the increase in yield that follows this deeper tractor plowing, you will be astonished at the facts.

Two wheat fields, side by side, as near alike as two peas in a pod and differing only in the depth plowed, showed a difference in yield of nearly ten bushels to the acre. This is not the experience of one farm, but of thousands wherever the tractor has gone with its greater power and consequent ability to plow deeper and better. So aside from all the other advantages a good tractor will bring to you, such as enabling you to get your crops in on time and to harvest them when they are ready, the cutting down of hired help and the big saving in your own labor, the doing away with so many chores and the saving it makes in farming costs, you should not overlook the fact that with the tractor will come bigger, better crop yields.

Citrus Fruit Market

Los Angeles, Sept. 18, 1917.

The orange market is not as strong as  
formerly, some auction sales having  
been made at disastrously low prices.  
On the other hand the five dollar mark  
has been touched by some of the better  
brands. This appears to be in part at  
least a result of careless packing and of  
sending a grade of fruit which should  
go to the by-products factory.

Lemons likewise very low, this partly  
because of the season when demand ma-  
terially decreases.

Shipments

Shipments of oranges from Southern  
California since November 1, 1917, 38-  
137 cars, lemons 7420, total 45,557; to  
same date last year oranges 30,023, lem-  
ons 6572, total 36,600. From Central  
California to date this season oranges  
5044, lemons 164, total 5208; to same  
date last season oranges 5398, lemons  
146, total 5544. From Northern Califor-  
nia to date this season oranges 845; last  
season oranges 610, lemons 1.

lem, \$5.35@5.50. Grapefruit halves, \$0.95  
@1.30.  
Philadelphia: 3 cars. Val. \$2.10@3.50.

MARKET NOTES

Corn has been advancing and declining  
on the Chicago Exchange according to  
the weather reports or perhaps accord-  
ing to the speculator's fears of early  
frost.  
December contracts on cotton are hov-  
ering around 20 and 21 cents in New  
York market.  
Weather in the cotton belt has been  
favorable.  
Humboldt County dairymen predict  
that butter will yet sell at \$1.20 per two  
pound square. Butterfat in that county  
is already commanding 5 1/4 cents.  
Some market observers are predicting  
even dollar per pound butter and dollar  
per dozen eggs.  
California rice is not being offered but  
it is thought it will soon be on the mar-  
ket and at prices materially above East-  
ern or Asiatic grown.  
Onions are taking on a more satisfac-  
tory price; Brown are often commanding  
as high as \$2.25. The San Joaquin delta  
increased its acreage over 1916, which  
was 3700 acres, to 3300 acres.  
Sugar has declined materially; it is  
thought largely because of fear of pos-  
sible food commission control.  
In Los Angeles cold storage are 63,752  
cases of eggs, 235,978 pounds of butter,  
over a million pounds of cheese and  
nearly 50,000 boxes of apples. The but-  
ter, egg and cheese storage is much  
greater than preceding years at same  
date, while the apple storage is only  
about a third of that of 1916. The butter  
and egg holdings are decreasing at a  
very rapid rate.  
Poultry supplies, both storage and  
fresh, are large. It is thought this is the  
result of reducing stocks on the ranches  
because of high feed prices.

Alfalfa Land for Dairying

Land already checked, leveled and in good stand of alfalfa. For sale on  
easy terms in tracts of 20 acres and up. Also first-class orchard and bean land.

BRENTWOOD IRRIGATED FARMS

Sixty-three miles from San Francisco in Contra Costa County. For prices,  
etc., address  
BALFOUR, GUTHRIE & CO., Land Dept., 350 California Street, San Francisco.

# MAXWELL

Most Miles per Gallon - Most Miles on Tires

## A Good Investment— The Maxwell Motor Car

"Webster" says: "*Investment: the laying out of money in the purchase of property, especially a source of income or profit.*"

We maintain that that definition exactly fits the purchase of a Maxwell.

American industries have hundreds of millions of dollars invested in labor saving devices.

That's what the automobile is today—a saver of human energy and time.

And, friends, energy and time are you—are *your* life.

Can you afford to waste time and energy when you can run a Maxwell for \$2 a week?

You can drive a Maxwell 5,000 miles a year at a cost of \$2 a week.

This is not a theory.

Scores of thousands of Maxwell owners are doing it.

In our great economy contest on May 23rd, last, 1,092 Maxwells averaged 27.15 miles on a gallon of gasoline each.

In our great economy contest in June and July last, 2,040 Maxwells averaged 29.04 on one gallon each.

The Maxwell engine holds the world endurance record—22,022 miles without stopping.

The Maxwell clutch runs in oil—is wear-proof, smooth, efficient.

Maxwell transmission is simple, trouble-proof.

The mighty Maxwell axles stand the strain of the road.

Every vital part is built to do its work smoothly and well for years.

Whether for farm or city use, the Maxwell is *your* car.

Touring Car \$745

Roadster \$745; Berline \$1095

Sedan \$1095. All prices f. o. b. Detroit

## Scenes at the Tractor Demonstration

## Five Standard Subsoil Plow

Killefer  
Quality

Killefer  
Efficiency

This is one of the line of subsoil plows shown at the Tractor Demonstration at Vail's Ranch. The value of good subsolling was shown by the work on this ranch and the large five standard plow was ordered to finish the acreage left by the Tractor Demonstration. Subsoil work should be done as early as possible:—do not delay—get your orders in and begin work as soon as possible.

## P & O WHY?

**Why did They Pull the P & O Light Draft Little Genius Power Lift Tractor Plow at the Tractor and Implement Demonstration held at Los Angeles, Cal?**

**WHY? BECAUSE** it was only natural and a matter of choice. Results were essential, and obtained with the P & O LITTLE GENIUS TRACTOR PLOWS back of some 20 Tractors. Depth, Light Draft and Good Plowing followed. Demonstrated positively a one man outfit and easily operated.

### SOME FEATURES

Single trip rope controls plow.  
Power lift feature is real.  
Power lift in and power lift out of ground.  
High level lift.  
Ample clearance under beams and between bottoms for all conditions.  
Heavy beams and braces.

Strength.  
Levers low when plowing and when bottoms are raised.  
Bottoms with proper suction built in.  
A reinforced frog.  
Quick detachable shares.  
Adjustable hitch with wood break properly designed and assembled.

Actual field work under severe conditions has demonstrated more than we can tell you, and all backed by a successful three years world's field record.

## Southern California Tractor Demonstration

Complete Success of Demonstration of Use of Farm Power, Especially Tractors, on All Types of Farm Implements. Soil Hard and Almost of a Hardpan Nature, but Powerful Engines Show Ability to Negotiate Difficulties. Attendance Nearly 100,000

The upper and lower photos on the cover were taken at time of taking the photos on Friday. Middle left shows main exhibition tent. In the far distance the rows of smaller tents of individual exhibitors. Middle right one of the many rows of tractors, with the main tent and all the larger exhibits in the background. Over 2000 tractors were parked at one time.

**W**HEN the International Tractor Demonstration, the only one east of the Rockies this year, was recently held at Fremont, Nebraska, all

thunder shower and wind storm made puddles of the entire demonstration field and razed every tent and structure on the field—this a few days before the demonstration was to occur.

However, the demonstration went on and it is chronicled that no single engine laid down on the job but everyone demonstrated itself built to negotiate Nebraska clay and gumbo, and great were the praises for the

at the time of Southern California's demonstration this year was doing its prettiest. But that soil—the big 75's with the plows built for any task any farmer may ask of them turned it up in clods as large as some

Officers of the Traction Engine & Implement Dealers Association

The larger man at reader's right is President O. H. Stevens, at his right Vice-President H. L. Marsh, at his right Treasurer Alex McCluskey; at reader's left Manager M. O'Neill. Secretary Cleveland had flown before the Cultivator camera could see him.

Arnett & Company's Tent

roads of obstacles were encountered and for a time it was felt that it might be necessary to postpone or all of the demonstration. First a

The opening day saw another continued rain, accompanied by wind which tore tents into shreds and left the gumbo soil a mass of thin putty.

In the Dixon and Griswold Tent  
Exhibit of all types of farm implements

The Killefer Subsoiler

A big "75" is just hitching on to this subsoiler, which easily handles hard soil to a depth of 20 or even 24 inches.

Yuba Ball Tread 20-35 Tractor

It is pulling four John Deere Engine Disks

tractor after that demonstration under those conditions.

California's demonstration this year was under somewhat different circumstances. The weather was perfect and there was no wet gumbo to wallow through for California climate is always perfect and

of the people attending the demonstration. At other places where the clods had been worked down to the consistency of exceedingly fine flour by various pulverizers and harrows it lifted itself to heaven and we all breathed it and swallowed it and carried it home on our persons.

At the great Nebraska demonstration where all manufacturers east of the Rockies vied with each other in showing their best at its best there were about 90 tractors, pulling at times 290 bottoms. Down in the Southwestern corner of the United

for some hard problem by which he could prove the efficiency of power farming.

We took occasion to converse with several farmers—prospective buyers. They had no complaint of their treatment and frequently were heard to

ers' Association erected tents of their own. Some of these are shown in the engravings, which give a much better idea of the demonstration than does the written word. These photographs taken with the Cultivator camera also show something of the crowds of people who attended. "How many were there?" We don't know for there were no turnstiles. There were no gate receipts for everything was wide open, even to free ice water with individual cups, free lemonade, freedom and the glad hand everywhere, but there were 2000 autos counted in one parking place at one time and from this and fairly close observation on various days of the demonstration it is generously estimated that there were not far from 100,000 people inspecting these tractors as they turned up the earth

#### TAKE GOOD CARE OF THE TRACTOR

THE man who buys a tractor with the idea that it will do his work and be able to take care of itself will be sadly disappointed, but the man

who buys expecting to give the tractor good care, keeping it well housed as clean as possible, finding loose broken and wornout parts as soon as they need repair, will find the tractor will more than pay him back.

The first consideration in taking care of a tractor is to see that it is properly housed. The man who buys a tractor without a good, dry place to keep it starts to lose money soon as he gets the machine. Weather, with its rust and dirt, will start work on an exposed new tractor once, and it is too costly a piece of machinery to treat that way.

New Lambert Chain Tread 8-16 Tractor  
It is handling the No. 1 four-furrow power lift P. and O. Disk Plow

States, at the Southern California demonstration there were more than three score of firms exhibiting, 49 of whom made a showing of over 60 tractors, which were pulling moldboard plows, disks, pulverizers and clod crushers, chisel tooth, spring tooth and pretty nearly every kind of cultivator or soil tiller in ex-

remark, "We have learned more of the tractor and its possibilities in these few days at this demonstration than we ever knew before of tractors and tractor propelled implements."

Besides the demonstration feature immense tents were erected which gave place to exhibits of manufactures equal to those of a county fair.

Samsco Sledge-Grip 8-25 Tractor  
It is attached to a No. 47 fifteen-foot Forkner Tiller

istence. There were big 75's, a foundation for war tanks if needed, and there were all types and grades from that down to the little garden motor-propelled hand cultivator. The members of the Southern California Association and their manager, Mr. O'Neill, have to be congratulated on the great success of their demonstration.

Of course automobiles, tires, oils and greases for auto and tractors and farm implements predominated, but irrigation supplies, fertilizers, bacteria, furniture, attachments or improvements to put on almost everything, even washing machines and all household conveniences had no small place; even land promoters en-

Case 9-18 Tractor  
It is pulling a No. 9 two-furrow P. and O. Disk Plow

It was held in the eastern outskirts of Los Angeles in a field of over 600 acres, which gave opportunity of every kind for test or demonstration which the prospective buyer might demand, and they demanded and found ready response on the part of every manufacturer who was looking

tered, to the extent of giving it almost the appearance of a great land show.

The large central tents near the entrance were divided up into booths and in these were nearly 50 different exhibitors. Besides these, members of the Tractor and Implement Deal-

Moline Universal Two-Wheel Tractor

from Tuesday morning till Saturday night. In fact the work did not end on Saturday for even on Monday interested spectators were still watching power farming on a big scale.

The movies were there with their cameras. When the dust did not entirely hide their vision they had opportunity to get some real live reels. On Friday a gathering of all types of tractors and implements was staged and the procession passed in front of the camera. These reels will be ex-

A good tractor shed which will give adequate weather protection will cost very much and it can be set in some convenient place away from major farm buildings. Thus the danger from fire which might possibly be caused by the gasoline and oils which must necessarily be kept about the tractor will be lessened.

It is of the utmost importance that the tractor shed be weather proof. If it were not, the depreciation on the tractor would be enormous, due

hibited in all sections of the country.

It was all good advertising. It was all good business for the farmer has intelligent eyes and opportunity to see is all he needs in such times as these.

California farming will be advanced by this demonstration.

#### HIS EXPERIENCE

"That young electrician got an answer from the girl he proposed to that was opposed to all his scientific principles."

"What was it?"

"A positive negative."

needless rust and corrosion. "Since the tractor is a finished machine and also a costly piece of machinery, it stands one in hand to take care of it after he has purchased it. A simple wall is all that is necessary, provided it has no cracks or knot holes for rain and snow to beat through. The roof should be tight and should be made either of shingle or some good prepared roofing. It is not necessary to have a very large building for a tractor shed, but it is very desirable to have it large enough to include a work shop. No matter how good a tractor a man may have, there is always more or less work necessary to keep it properly tuned up and in good

ing condition. If the work shop the tractor shed are combined in building, it is very easy to do this ssary tinkering. There is al- considerable repair work to be on the various machines about farm, so that the repair shop will

floor might not prove as desirable as one of well tamped earth or cinders. The lugs on the drive wheels of a tractor would not get much traction on a concrete floor and unless the concrete was of exceptionally good quality they would soon chew the sur-

top and leave the rest of the floor as is to keep the tractor on.

A tractor belonging to a careful farmer will spend very few nights outside of the tractor shed. During the harvest season, or any other rush season, when the tractor is being used almost continuously, it will not hurt to leave it outside over night. It is advisable, however, even then, to cover the main part of the tractor with the sort of a canvas.

Some farmers have the mistaken impression that when they buy a tractor and sell their horses they will have no more chores to do. They might find this true for a while, but sooner or later they will discover that it takes constant watchfulness and care to keep a tractor or any other machine in service. A tractor should be groomed every morning that it is to be used just the same as one would groom and feed the horses. This work involves wiping off the various parts of the engine, oiling the bearings which must be oiled by hand, filling the grease cups and the lubricator oil reservoir, seeing that the radiator is filled with water and that the gasoline tank is filled. If this is done each time the tractor is taken out, it will not take very long and will save considerable time. The best thing about a tractor is that this work is not necessary if the tractor is not in use. The writer has found that the best way to do the chores on a tractor is

P. & O. No. 1, Tractor Power Lift Disk Plow

do them in a regular order. For instance, each morning first fill all the grease cups, then oil all places needing oil from a hand oiler, then fill the oil reservoir, next fill the radiator, then fill the gasoline tank; afterwards he can wipe off the machine and then he will be ready for a day's work. While one is doing this work, he will naturally be watching the various parts of the machine and if anything is wrong or any part is broken, the chances are he will notice it and repair it before any serious damage

Too much cannot be said to emphasize the need for continual watchfulness for things that are not right with the engine. The tractioneer who can operate his machine year after year with the least expense is the man who is continually on the lookout for strange noises and peculiar actions in any part of the engine. Then he is very seldom surprised by finding anything wrong which will require a great deal of work and the replacement of a number of parts. Just as soon as a repair or adjustment is necessary, he will notice it and will attend to the matter before it becomes serious.

Another matter which will receive considerable attention on the part of the careful tractor owner will be the kind of oil to use and the way to use it. The life of a tractor depends very largely upon this one feature. A tractor which is kept supplied with a good quality oil of the right consistency will last much longer, will do a great deal more work and at the same time use less fuel than will a tractor which is given poor oil which is too thin or too thick and which is given out at irregular intervals.

The man who takes care of his tractor and who looks it over every time before he puts it into service will find that he will get better service from it. He will have fewer breakdowns. His repair expense will be much less and yet at the same time his tractor will last longer than will the one belonging to his neighbor who will not look it over as long as the thing will run.

# PAIGE

*The Most Beautiful Car in America*

## The Final Test of Quality

IT IS a matter of record in fifteen of the principal cities that Paige used cars bring a higher price—Proportionate to first cost—than any other American automobile.

And here, after all is said and done, is the final test of quality.

A used car has been "through the mill." Its motor and all of its working parts have been subjected to constant strain.

Its "finish" has been knocked off—if it will come off at all.

Its gears, its rear axle and its transmission have endured the punishment of day-in and day-out pounding. All of its weakness is plainly evident—and likewise its strength.

The used car either stands before you a broken down, dispirited "has been"—or a strong, robust champion of many battles—ready and eager for all the service that man can give it.

That, we repeat, is the final test of quality.

And in this test the Paige stands supreme.

After fifteen, twenty-five, thirty-five thou-

sand miles of service, there is still enough GOODNESS left in a Paige to command the record price in used car markets.

Frankly, now, is there anything that we could tell you about our product that would be more convincing? Could you have any better guarantee that a Paige is all that we claim it to be—all that you could possibly expect it to be?

As to the selection of a model, this is simply a matter of your own personal requirements.

In our line you will find a seven-passenger car, a five-passenger car and two roadsters. You, alone, can make a choice, but please remember that you can't make a mistake. For all of these models are Paiges—blood brothers of the same strain. That is the really important thing.

But don't lose any time. See your Paige Dealer today. Let him give you the kind of demonstration that will definitely settle your automobile problem, and place your order while we can still promise early deliveries.

Paige prices range from \$1330 to \$3230. There are sixteen distinct body styles including Limousines, Town Cars, Sedans and Coupes. No handsomer line of enclosed vehicles can be found on the market.

## Greater Production of Food in California

RAPID fire campaign for more wheat, more of other grains, more foods of all kinds, is scheduled. The campaign for this year's production has been the training camp. Now, for 1918 the rapid fire guns are in commission. Workers—fighters may be better—are to be in action in every producing county. The 19 farm advisers now at work will have assistants and another score of agents or advisers are to be appointed.

The appointment of an adviser necessitates farm bureaus in every county with a membership of at least 20 per cent of the farmers of the county. Hence some work for somebody or bodies. The state university is the principal somebody.

However, to discuss the question from all standpoints Governor Stephens called together the council of defense, presidents of farm bureaus, their advisers, certain federal officials and others.

Governor Stephens called the meeting to order and presided through the first session and some of the others. The governor's interest or rather his appreciation of the necessity for action should inspire all to utmost endeavor in food production.

The governor's address was short, making appeal for earnest consideration of the problem and preparation on the part of California to do her part.

President Wheeler of the state university, State Horticultural Commissioner Hecke, State Leader Crocherson and others made addresses upon the needs of the hour.

Dean Thomas F. Hunt's address shows so forcefully the need and the effort to be made to meet it, that we quote from it liberally:

#### WAR EMERGENCY FARM BUREAUS

By Thomas Forsyth Hunt

WAR emergency has arisen requiring an additional expenditure in California of between \$100,000 and \$200,000.

It involves an expenditure of anywhere from \$4000 to \$14,000 in each of the agricultural counties in California for the purpose of increasing the supply of food for ourselves and our allies.

Two emergency bills have recently passed congress and been signed by the president. The one is known as the food control act, the other as the food production act, sometimes also as the food survey act. The administrator of the first of these acts is Herbert C. Hoover, and of the second, David F. Houston, secretary of agriculture.

Great interest has been taken in the food control act. Its provisions have been so widely and fully discussed in the public press that it is unnecessary to comment further upon it here.

#### Food Production Act

The food production act has, on the other hand, received but little attention. It is necessary, therefore, to outline briefly its provisions. Some idea of the organization which is available to put the act into force will help in understanding the significance of this measure. The food production act provides an appropriation of over \$11,000,000. It is a comparatively small sum as war appropriations go. Nevertheless, it means a very considerable organization, espe-

cially since most of this money is not to be expended for commodities but for the services of men and women. It is comparatively easy in these days to give an order for one or more million dollars worth of materials. It is quite another matter to expend efficiently \$10,000,000 in ten months in salaries.

There are appropriated by this act two and one-half millions to determine the basic facts concerning the ownership, production, transportation, manufacture, storage, and distribution of foods and related material. If the price of food to the producer is too low or to the consumer is too high, evidently it is the intention of congress to have it determined where the trouble lies and how to apply the remedy. It may be not without interest to note that for this particular phase of the work the secretary of agriculture is directed, so far as practicable, to engage the services of women.

If the secretary of agriculture finds that there is need for seed for particular localities, two and one-half million dollars is appropriated as a revolving fund by means of which he is enabled to furnish seeds to farmers at cost. For the diseases of livestock and the enlargement of live stock production and for the conservation and utilization of meat, poultry, and dairy products, \$885,000 has been appropriated. There has also been appropriated \$441,000 to deal with insect pests and plant diseases.

For the work of carrying on the educational and demonstrational work through farm bureaus and related agencies, four and one-third millions have been appropriated. Out of this allotment the University of California college of agriculture is to receive \$104,000. While a considerable sum in the aggregate it is small relative to the whole enterprise of which it is a part.

This \$10,000,000 appropriation is to be executed by the United States department of agriculture which already has behind it more than 5000 scientifically trained men and an annual budget of over \$25,000,000. It is to have in carrying out this work in addition the assistance of 48 state agricultural colleges whose experiment station staffs number 1900 persons and whose budgets aggregate for research considerably over \$5,000,000. No other similar organization exists or ever has existed anywhere.

In California the college of agriculture has a staff of approximately 165 scientifically trained men and a budget of \$605,000, which as far as possible will be brought to bear on this war emergency. It is estimated that in one way or another about 90 persons must be added to the staff in order to assist the federal government in carrying out the various provisions of the food production bill.

California therefore has the following resources: \$605,000 from the regular budget of the University of California college of agriculture; \$104,000 from the emergency food production act, approximately \$40,000 now appropriated by boards of supervisors of 20 counties and the possible appropriation by these and 19 other counties of approximately \$68,000 more, making a gross sum of about \$800,000. Every dollar will be used directly or indirectly in helping to win this war for democracy.

Under the farm bureau system, developed in California, there exists one of the most efficiently organized bodies of farmers in America. The people, not even the members of farm bureau themselves, are aware of it. There are in California at present 229 farm bureau centers with aggregate membership of 9200 persons.

The farm bureaus organize various activities, such as cow testing departments, cream pooling departments, swine breeders' departments, poultry raising departments, purchase and marketing departments, and loan associations. Two hundred and seventy-seven projects have been undertaken by the farm advisers in counties, such as drainage; alluvial reclamation; depth of plowing; prevention of erosion by terracing; fertilization; liming; cover crops; summer and winter forage crops; alfalfa, clover, bean, and rice culture; crop rotations; pruning orchards; trellising grape vines; tree record work; orchard management; control of cholera; control of grasshopper, squirrel destruction; control of weeds; improvement of rural schools; the construction of silos; and the installation of septic tanks on farms (Napa County has installed 264 of these septic tanks).

The \$104,000 has been allotted California for three purposes as follows: \$78,000 to extend the farm bureau movement by the appointment of additional farm advisers and assistant farm advisers; \$20,000 to employ additional women as demonstrators of food conservation; and \$6000 to increase the number of teachers of agriculture from the present number of 15 to 45, these teachers of agriculture acting under the direction of these boys' clubs and performing other forms of extension work. In order to facilitate the work of the women demonstrators the state will be divided into eight districts. To each district will be assigned a resident demonstrator trained in the science and practice of home economics. What are these women demonstrators doing? Naturally, during the present emergency their work will be devoted chiefly to the development of home gardens, to the rearing of poultry, to canning and otherwise preserving surplus products of the garden and orchard and to the study of such substitutes in the family dietary as best conserve the food needed by our Allies. At present the emphasis is being placed on the canning and drying of food materials. In all these enterprises the conservation of labor must not be overlooked.

This farm bureau movement began in California a little more than ten years ago and has been thus far administered under a plan which provided for the organization each of four or five counties, with the expectation that in 1922 the forty agricultural counties would be provided with farm bureaus and their attendant farm advisers. Suddenly there comes a war and congress asks us to do in one year what it had intended to do in five years. Obviously, if it is to be accomplished everybody must cooperate to that end. Doubtless sacrifices will have to be made. The college of agriculture is making this new responsibility its first aim and it bespeaks the help of every agency in the state to make the task successful. It will be impossible to succeed without such cooperation.

Presidents of farm bureaus in nearly every organized county are

sent and gave pithy three-minute  
as to farm bureau work in their  
nties.

Prof. John W. Gilmore discussed  
California's share in the billion bushel  
eat crop; Prof. Shaw, how idle  
is may be made productive—one  
his findings has been that fewer  
as are idle in California than  
y imagine—Dr. H. J. Weber in-  
ed on better sorghum seed and  
f Adams reported as to extending  
irrigated area. He said:

F. Frank Adams

irrigation has never been a large  
or in wheat production in Califor-

Grain growing as thus far prac-  
here is essentially an extensive  
ration in which irrigation ordinar-  
has little part. The last census  
wed less than five per cent of the  
eat acreage of California as irri-

California cereals are raised chiefly  
three main valleys,—Sacramento,  
Joaquin, and Imperial. A personal  
vass of the wheat situation under  
irrigation projects of these, and  
of Honey Lake and Shasta Val-  
by members of our division,  
ie during the past two weeks, in-  
ates that irrigation can be made a  
ided factor in the California wheat  
gram for 1918 if California farmers  
er irrigation projects are so dis-

Sacramento Valley offers a large op-  
portunity for increasing the irrigated  
eat acreage in 1918, but, generally  
aking, the use of water on this  
p in this valley has been proven to  
of advantage only in years of less  
normal rainfall. In the Durham  
Chico sections low yields are even  
d by experienced growers to result  
e from too much rainfall than  
a too little, the exception to this  
ng the late spring sowings follow-  
by deficient seasonal precipitation.  
side of the upper east-side portion  
the valley and the lower lands near  
river that are in some cases used  
wheat, however, irrigation is a  
ven distinct advantage in Sacra-  
ento Valley when the rainfall is be-  
v normal, or is up to normal for the  
ar but below it in the spring when  
ing north winds, unless counter-  
ted by rain or irrigation, may ma-  
tially check the yield. If 1917-1918  
ould be a dry season the produc-  
n on 100,000 acres of grain land un-  
r the six principal irrigation pro-  
ects of the valley could be very ma-  
tially increased by irrigation, but  
many cases this would necessitate  
ving enlargements or lateral ex-  
ensions ready. Of this 100,000 acres,  
,000 acres, not counting land in  
mmer fallow, is idle or only in  
sture in 1917. Assuming that ma-  
rial extensions will not be made on  
e basis of wheat irrigation alone,  
e area under Sacramento Valley  
jects which it is practicable to con-  
der available for irrigated wheat in  
18 if the season is a dry one is  
obably under 50,000 acres. There  
as no irrigated wheat under these  
jects in 1917 and less than 2000  
res of irrigated barley and oats.  
While experiments at the university  
rm at Davis have shown that when  
e seasonal moisture is below nor-  
al, one or two irrigations will in-  
crease the yield of wheat very mater-  
ially—the increase in two dry seasons  
anged from 160 to 250 per cent.

The San Joaquin Valley, especially  
round Tulare Lake and in Kern  
ounty, grows the chief area of Cali-  
ornia irrigated wheat, the main irri-  
ation projects reporting 57,500 acres  
n 1917 out of a total of 260,000 acres

of irrigated grain under all of the  
main irrigation projects of the valley.  
While the northern San Joaquin Val-  
ley counties were formerly banner  
wheat producing areas, they seem no  
longer to be a large factor in Califor-  
nia wheat production; and, although  
possibilities for an increase under ir-  
rigation in these northern counties in  
1918 are large, careful inquiry indi-  
cates that only an active educational  
campaign will bring about sufficient  
increase to be of consequence. North  
of Fresno there are at least 150,000  
acres under San Joaquin irrigation  
projects on which wheat can be  
grown and irrigated to the extent that  
the substitution of irrigated wheat for  
other annual crops is found wise. Of  
this 150,000 acres, at least one-sixth  
is now idle or is reported as not like-  
ly to be farmed by its present owners  
in 1918, due to labor or money or other  
shortage. Evidently, without a  
very active educational campaign in  
the counties north of Fresno, the  
largest increase in the San Joaquin  
Valley irrigated wheat acreage in 1918  
will be in those sections now giving  
most attention to this crop, — Kern  
County and the Tulare Lake region.  
These sections produced all but 600 of  
the 57,500 acres of irrigated wheat  
grown under the chief San Joaquin  
Valley irrigation projects in 1917.  
Furthermore, they report over 200,000  
acres open to irrigated annual crops,  
including wheat, in 1918, and a prob-  
able increase in the irrigated wheat  
area next year of over 20,000 acres, or  
of about 40 per cent.

Increase in the irrigated wheat  
acreage in Imperial Valley in 1918 will  
be almost entirely a matter of propa-  
ganda. Of 401,000 crop-acres irrigated  
in this valley in 1917, 76,000 acres was  
in barley and only 1220 acres in  
wheat. The area under the ten mu-  
tual companies of the valley stated to  
be normally available for grain grow-  
ing under irrigation in 1918 approxi-  
mates 85,000 acres, which of course  
does not include in excess of 100,000  
acres of land now in other annual  
crops than grain; nor does it include  
at least 10,000 acres of undeveloped  
land under Mutual Water Company  
No. 3. Yet without an active wheat  
campaign in the valley and in addi-  
tion, unless a supply of satisfactory  
seed is made available, it is not likely  
that the irrigated wheat acreage there  
in 1918 will be large. Some in the  
valley are emphatically opposed to  
wheat growing there, previous fail-  
ures due to rust and poor seed being  
fresh in mind. On the other hand a  
number of farmers there believe in  
wheat and the growers of the 1220  
acres of irrigated wheat in 1917 report  
a satisfactory yield. Furthermore, ex-  
periments at the Imperial Valley ex-  
periment station of the University of  
California show a response to irriga-  
tion by wheat exceeding that by bar-  
ley. Yields as high as 35 to 57 bushels  
per acre have been obtained with irri-  
gated White Australian wheat on the  
Imperial experiment station and in  
consequence and after careful obser-  
vation of the behavior of wheat under  
irrigation in this valley, those in  
charge have advised that on the bet-  
ter soil of the valley wheat is likely  
to be more profitable than barley.  
Conditions in Imperial Valley there-  
fore seem ripe for a substantial in-  
crease in wheat production if deemed  
necessary to make up the state's al-  
lotted quota.

There is no good reason why under  
a normal water year, the entire in-  
creased wheat production called for  
from California by the national pro-  
gram could not be produced, if deem-

ed desirable, under irrigation. De-  
cision No. 4278 of the state railroad  
commission applying to water utili-  
ties and Chapter 191 Session Laws  
of California 1917, applying to mutual  
water companies, open the way for  
furnishing water for emergency use  
on wheat and other annual crops  
where previously this might have  
been impracticable. Availability of  
fall or winter water for wheat irriga-  
tion under a number of our valley  
projects makes it possible to irrigate a  
large acreage, and thus furnish a con-  
siderable measure of insurance  
against spring drouth, if the landown-  
ers are so disposed. At least 100,000  
acres of California land now lying idle  
or nearly so or first to be ready for  
cultivation in 1918, will be open to ir-  
rigated wheat in 1918 except to the  
extent that local conditions not dis-  
closed by our survey make wheat pro-  
duction impracticable or unwise.  
Some of this will probably not be  
farmed in 1918 unless purchasers or  
tenants are found. Certainly out of  
all the areas indicated, irrigation can  
very effectively aid the war wheat  
program for the coming year.

## HOW TO DESTROY WEEVILS IN CORN

If signs of weevils or grain moths  
show the corn should be inclosed with  
carbon bisulphid in a practically air-  
tight room, bin, box or barrel for  
48 hours. The liquid bisulphid should  
be placed in shallow dishes on top of  
the box or barrel holding ten bushels  
or less. The fumes from the bisulphid  
are heavier than air and gradually fall  
to the bottom of the receptacle, per-  
meating the whole mass. One pound  
of the carbon bisulphid is enough for  
a room or bin ten feet in each dimen-  
sion. After fumigation the ears must  
be thoroughly aired, whereupon the  
unpleasant odor disappears. Great  
care should be used with carbon bi-  
sulphid; its fumes are quite as inflam-  
mable as those from gasoline.

To prevent the entrance of weevils  
and moths into seed corn the ears  
may be stored in comparatively air-  
tight boxes or barrels with one pound  
of moth balls or naphthalene for each  
bushel of corn, which is not injured.  
Ten pounds will protect enough seed  
to plant 60 acres.

Redmond, Ore., is planning for a big  
potato show October 18-20.

*"the best oil  
for our cars"*

**CHEVROLET**  
J. W. Leavitt & Co., San Francisco  
"From our exhaustive tests of Zerolene, we think it is the  
best oil for use in our cars."

**REO**  
American Automobile Co., Tacoma  
"tried Zerolene in Reo cars; results so good that we have  
been entirely converted."

**DORT**  
Leach-Frawley Motor Co., San Francisco  
"excellent mileage with minimum carbonization."

## OUR ADVERTISERS RELIABLE

We guarantee our subscribers against  
 loss through dishonesty of any adver-  
 tiser in the Cultivator. We do not at-  
 tempt, however, to adjust trifling differ-  
 ences between subscribers and honest,  
 responsible advertisers, nor will we pay  
 the debts of honest bankrupts. Notice  
 of complaint must be sent us within 30  
 days from date of the transaction, and  
 the subscriber must have mentioned the  
 Cultivator when writing the advertiser.

## THIS WEEK'S COVER

See the movies on the cover of  
 this issue. There were some things  
 moving in the scenes besides the  
 the cranks of the movie cameras. In  
 fact, the dust was swirling everywhere,  
 and it was with difficulty that the  
 dozens of photographs of the tractor  
 demonstration were caught by the  
 Cultivator cameras. The tractors  
 shown were taken on Friday of dem-  
 onstration week. The upper one, were  
 it not for the people, would show an  
 excellent line-up of every tractor at  
 the demonstration. At the far end  
 beyond the clouds of dust stands the  
 big water wagon on which the movie  
 cameras were placed. At the bottom  
 the big tractors with plows attached  
 are just passing.

But more regarding that great dem-  
 onstration is given on the third,  
 fourth, fifth and sixth pages of this  
 week's Cultivator. The Cultivator  
 camera is always on hand where there  
 are features of agricultural interest.

## ORGANIZE BUREAUS

The two pages preceding edi-  
 torial give an account of the meeting  
 called by Governor Stephens and held  
 at Sacramento during the fair week.  
 The members of the state council of de-  
 fense, the chairmen of many of the  
 county councils of defense, President  
 Wheeler, Dean Hunt and many others  
 of the state university, as well as  
 members of farm bureaus and farm  
 advisers, gathered and discussed how  
 California can best respond to the  
 call for greater production.

One result of that meeting was ac-  
 tion in more than a score of counties.  
 This activity is being directed by some  
 member of the faculty of the college

of agriculture. We think that Dr.  
 Webber, perhaps, wears the largest  
 coat of any of this body of professors,  
 and to him was given the county in  
 California largest in production of  
 crops—according to the census of  
 1910 surpassing all counties in all  
 states of the Union. Under the pro-  
 visions of the federal law each coun-  
 ty which secures a farm adviser must  
 secure as contributing members of its  
 farm bureau one-fifth of the farmers  
 in the county. In the case of Los An-  
 geles between 1600 and 1700 members  
 must pay their membership dues an-  
 nually. If this is done, a county farm  
 bureau will be organized with dele-  
 gates from Centers in various sections  
 of the county. The farm adviser, or  
 county agent, will be appointed, and  
 in a county of such size some five or  
 six assistants will also be appointed.

We refer to this one county more  
 particularly because of the size of  
 the job to secure its complete organi-  
 zation, but proportionately the effort  
 required will be as great in every  
 other county, for at this moment,  
 with the shortage of labor and the  
 great demands upon the farmers, they  
 have little patience with interruptions  
 even in so important a work as that of  
 securing greater efficiency. But we  
 hope farmers in every county will  
 lend assistance to this movement, for  
 it is chosen as the one method best  
 suited to present times to answer the

sion that the borrowers through the  
 federal farm loan banks were bor-  
 rowing federal funds. Such is not  
 the case, excepting that at the incep-  
 tion of the movement, to give a work-  
 ing capital, a certain amount of stock  
 in the federal farm loan banks is pur-  
 chased by federal funds, and, of  
 course, at all times the management  
 will be under the supervision of the  
 secretary of the treasury. As the  
 loans are made, certain bonds secured  
 by mortgagees will be sold in the open  
 market. These will provide the funds  
 for future loans, and in this way, with  
 these bonds made secure through care-  
 ful management, an institution which  
 will have permanent value for farm-  
 ing interests will be established.

In many orchard sections there has  
 been a feeling that the federal board  
 has not been just. The central board  
 at Washington has ruled that the ag-  
 ricultural value of lands shall deter-  
 mine their appraised valuation. Mor-  
 al risks and even improvements on a  
 36 or 40-year loan cannot be consid-  
 ered. An orchard, however, may large-  
 ly enhance the productive value of  
 the land. To determine how much,  
 the board should consider this en-  
 hanced value is the occasion of the  
 meetings that are being held.

A forenoon and an afternoon meet-  
 ing in Los Angeles last Tuesday re-  
 sulted in resolutions, in the retire-  
 ment of the executive committee of  
 the Berkeley bank, its return and the  
 formulating and reading:

Principles to be Used by the Federal  
 Land Bank of Berkeley in Making  
 Loans on Orchard Lands

## Class "A" Orchard Definition:

1. Proven, adaptable land, with valid  
 and sufficient water supply which could  
 be profitably used for crops other than  
 orchards. Trees not exceeding 20 years

"ARE YOU SAVING Your Money to Invest in the Second  
 Issue of THE LIBERTY LOAN?"

call of our country. It is already or-  
 ganized in many counties and in every  
 state in the Union.

Dr. Hunt informs us that he al-  
 ready has in mind a number of men  
 qualified to fill the positions of these  
 helpers to the farmers. The first  
 county to secure complete organiza-  
 tion will be the first also to have these  
 men in the field aiding in the produc-  
 tion of more food and in the in-  
 crease of wealth in the county.

## FARM LOAN BANK

The newly appointed directors  
 of the federal farm loan bank at Berk-  
 eley are not only putting in their  
 banking hours but are working nights  
 and Sundays on the problem of fed-  
 eral loans on the Pacific Coast.

Something over a year ago the first  
 board was appointed. Complications  
 arose and almost an entirely new  
 board has been appointed. The new  
 officers have been on the job for  
 something over a month, and the mass  
 of detail business is being handled  
 as effectively as possible. But this is  
 far from the speed desired by the  
 man who months ago applied for a  
 loan. Members of the board are visit-  
 ing various sections to explain the  
 situation and to secure data which  
 will enable more intelligent direction  
 of the bank.

As President Joyce said in Los An-  
 geles last Tuesday: "We are ven-  
 turing on an uncharted sea." Noth-  
 ing like this has ever been at-  
 tempted; at least, nothing like it in  
 all respects, and President Joyce and  
 all the directors feel that not only  
 the success of the movement, which  
 means much to agriculture, lies large-  
 ly in their hands and they must make  
 no mistakes, but the fact that they  
 are handling the people's money im-  
 pels them to adopt the slogan, "Safe-  
 ty first."

Note that we say the "people's  
 money." There has been an impres-

of age and to be in full bearing, free  
 from disease and which have a record of  
 better than average crops over a period  
 of not less than five years.

2. Where a loan is desired on a parcel  
 of land less than five acres in area, it  
 must be demonstrated to the satisfaction  
 of the bank that such land constitutes  
 an actual farm and that its products pro-  
 vide the applicant's principal source of  
 income. Otherwise no loan can be made.

3. Upon lands which have no substan-  
 tial agricultural value, except for or-  
 chard, no loan will be made.

4. Upon young groves not yet in full  
 bearing, loans will be based on the land  
 as to its adaptability for other agricul-  
 tural crops, plus a reasonable considera-  
 tion based on the cost of planting and  
 the age of the trees.

5. On other than young orchards  
 trees will not be regarded as a basis for  
 enhancing the basic agricultural value of  
 the land unless satisfactory profits evi-  
 denced preferably by packing house re-  
 turns for a series of years can be shown.

6. Where loans are based on high  
 value,—such as a Class "A" orchard  
 land,—the term of the loan will be relat-  
 ed to the age of the orchard and its  
 proven productivity. Where high pro-  
 ductivity is shown, it must be assured  
 that borrowers will be willing and able  
 to meet the increased payments of short-  
 er termed loans. On such land the term  
 of the loan will be limited to 15 years.

7. Upon orchards, while not consid-  
 ered as Class "A" but which show an  
 average profit return, reasonable consid-  
 eration will be given as to the enhance-  
 ment of the general value of the land,  
 provided such land meets the proper re-  
 quirements as to its adaptability for other  
 agricultural crops.

8. No loans exceeding \$400 an acre  
 will be made. This is subject to the ap-  
 proval of the full board of directors of  
 the Federal Land Bank of Berkeley.  
 September 25, 1917.

At the Los Angeles meeting an  
 impulsive lady made an appeal to  
 everyone present at the meeting to  
 borrow their money of bankers who  
 would treat the orchardists fairly and  
 ignore absolutely the federal farm loan  
 bank. Better counsel prevailed, how-  
 ever, and after adjournment of the  
 general meeting H. M. Sheehan called  
 delegates of the associations together  
 and in a moment a temporary or-  
 ganization of Southern California As-  
 sociated National Farm Loan Asso-  
 ciations was launched. Mr. Sheehan  
 was made temporary chairman with  
 power to call a meeting which should  
 be represented by two delegates from  
 each association in the southern part  
 of the state. There were delegates  
 from about 40 associations present."

## Agricultural News Note

Make the millions of acres of  
 land busy in 1918.

The government has contracted  
 1,687,000 pounds of canned pineapple.

Indiana holds its seventh ann-  
 apple show November 21-27 at In-  
 anapolis.

Individual licenses must be secur-  
 ed from the government for all expo-  
 to Canada of sugar, flour, butter  
 wheat.

Securing of evidence of a sche-  
 to corner the tomato output of  
 Pacific Coast is announced by  
 government.

The late potato crop of Michi-  
 and Wisconsin, Minnesota and  
 Dakotas has been considerably da-  
 aged by frosts.

The Restaurant Keepers' Asso-  
 ciation of Seattle has formed an orga-  
 nization to buy potatoes and other  
 applies co-operatively.

New York apple growers are re-  
 ed securing readily \$3 to \$4 per  
 rel for their fruit. The buyers  
 said to be many and eager.

The Italian government has  
 upon a price for coke of \$54 per  
 and a severe penalty for any de-  
 who charges in excess of that pri-

Ten battalions of foresters are  
 be raised in the United States to  
 to Eastern France and aid in  
 work of getting out lumber and  
 tecting the forests of that country.

"The Packer" says: "The slogan  
 'Eat an apple, send a biscuit,' pro-  
 mises to materially stimulate the  
 of apples, regardless of the  
 thought that an apple may not  
 take the place of a biscuit as food."

At a recent meeting at Washing-  
 of growers and dealers with the  
 administration it was recommen-  
 that official potato grades be es-  
 tablished and that steps be taken to  
 that the official grades are adhered

According to a statement from  
 Washington "the food control  
 does not prohibit the manufact-  
 of wine from grapes and the food  
 ministration has no intention at  
 present of prohibiting the use of grapes  
 wine making."

Advices from Washington regard-  
 the bean crop state that the food  
 administrator has requested of the  
 growers and shippers not to offer  
 more future shipments until the  
 crop is entirely harvested and then  
 sell for delivery not more than 30  
 in the future.

As a means of protecting work-  
 agricultural workers in England  
 rooms have been established in  
 fields of various parts of the coun-  
 The rooms are supplied with reas-  
 matter, with tables where lunch  
 may be eaten and a cup of tea ser-  
 ed at cost and, best of all, with  
 stockings, shoes and skirts for the  
 which have become soaked in the  
 fields.

Yung Kee, near Canton, China  
 one of the largest markets for  
 cocoons in the world. There are  
 large shedlike structures for re-  
 ceiving the cocoons, which are brought  
 from the surrounding country. There  
 is a continuous stream of small  
 boats down the river to the mar-  
 ket. The cocoons are delivered in  
 bales, which after inspection are  
 weighed and the producer is given a  
 red slip of paper on which is  
 weight and other particulars, includ-  
 ing the price, are given. The buyer  
 presents these red slips to the col-  
 lecter's window and is paid in Chinese  
 coin of about 20 cents value.

# Agricultural News Notes of the Pacific Coast

## Northern California

A red spider has seriously damaged the prune crop in the Meridian section of Sutter County.

The largest exhibition of poultry ever made at a state fair was made at Sacramento this year.

Early Japanese varieties of rice are now being harvested in the district about Biggs, Butte County.

Humboldt County has had a dry summer and consequently is suffering from a shortage of hay and grain.

The San Francisco Poultry Association will have an exhibition at the old show to be held October 13-18.

Forty counties have reserved space for exhibits at the land show to be held in San Francisco October 13-18.

Growers of wine grapes have begun shipping. Sutter County reports a price of \$12 to \$15 a ton for Zinfandels.

The Sonoma County Prune Growers' Association has opened packing plants at Santa Rosa, Geyserville and Eidsburg.

The management of the Glenn County fair has decided to continue the fair one more day, closing on the evening of September 30.

The anthrax scare in Yolo County has subsided. Dr. Hayes of the University farm reports that no new cases have come within his notice.

The Glenn County farm bureau has held no night meetings during the month of September because of other important meetings scheduled.

The government food controller has asked sugar refiners to be prepared October 15 to establish a wholesale price for sugar of \$7.25 per cwt.

Dean Van Norman of the state university farm at Davis announces that compulsory military training will be established at the farm from now on.

Yolo County took first prize at the state fair for "largest, best and most complete exhibit of products by any county in the state," bringing home a total of over \$1000 in cash prizes.

Manager Virden, of the California Fruit Distributors, predicts that California's 1917 output of deciduous fruit will exceed last year's by 2000 carloads, amounting to about 20,000 carloads.

B. N. Hedegard of Plainfield in good old Yolo County has begun to harvest his rice. His 160 acres of rice grain is in good condition. This is the first of the rice harvest but now on the work will be pushed rapidly. The crop will be the largest and best the county has ever had and will be handled by the new rice mill plant at Woodland.

## Central California

The Denair creamery was burned to the ground last week.

The California Peach Growers will pay cash on delivery for this season's crop.

Merced County fig growers are receiving 11¼ cents for Calimyrnas, 8 cents for Adriatics.

The Kern County fish and game commission has planted 100,000 fish in streams of that county.

Women grape pickers in the Clovis section, Fresno County, are earning from \$3.50 to \$5.00 per day.

Bean growers of Fresno County attended a farm bureau bean conference in Fresno last Saturday to arrange for bean threshing.

An experimental planting of cotton at Turlock has proved very satisfactory. The cotton bolls are just beginning to open.

The cannery at Kingsburg in Fresno County has contracted for 200 acres of tomatoes and has already begun operations.

Much interest throughout the East has been attracted to the Turlock section by the Valley exhibit train which has recently returned after a 3000 mile journey.

The California peach growers have received notification from the patent office at Washington giving it monopoly in manufacture and sale of peeled and dried peaches.

The Corcoran beet sugar factory has been closed for the season and all beets of the district will be handled at the Visalia factory, which will resume 24-hour runs.

Yielding to the appeals of growers to provide workers to harvest the peach crop the board of trustees of Turlock have ordered the schools closed temporarily.

The big warehouse being erected by the Turlock Merchants and Growers' Association is nearly completed. It will be ready for the operation of the bean cleaning department by the first of October.

A Home Protective League has been formed at Denair, Stanislaus County, for the purpose of apprehending anyone found molesting crops of that locality. Patrols and a system of signals will aid in this work.

With the recall of C. A. Paulsen from New York City, where for the past two years he has acted as Eastern representative of the California Associated Raisin Company, the association will enter upon a world-wide campaign to put raisins into every home.

## Southern California

The warehouse at Owensmouth is receiving daily consignments of 1500 sacks of beans.

A producers' association at Van Nuys will erect a canning factory at a cost of \$15,000.

The packing of apples in the Yucaipa Valley is now under way and carload shipments have already begun.

Orange County reports damage to her orange crop by the June heat wave much less than at first estimated.

R. L. Knox has been chosen secretary and manager of the San Antonio Fruit Exchange, to succeed P. J. Dreher.

Two hundred beekeepers recently attended a meeting at the A. K. Whidden Apairy at Fruitdale, Riverside County.

According to an authority San Bernardino County has 30,000 laying hens which are producing 2,500,000 eggs annually.

Carload shipments of beans are now moving from the Pomona Valley. Shipments will probably continue until December.

Palo Verde, Imperial County, will make exhibits at both the Riverside Fair and the California Land Show to be held in San Francisco.

The Hemet section in Riverside County reports a yield of beans from irrigated land of six to twelve sacks per acre, against two to four sacks on unirrigated land.

Short staple cotton growers of Blythe, Riverside County, are planning the erection of a gin and oil mill. This will be the third gin to be established by the growers.

A three-year-old filly entered in the state fair races by the Hemet Stock Farm captured first prize in the Stanford-Occidental three-year-old trot, winning a purse of \$3000.

Because of scarcity of help to aid in fumigation, the work is not being carried on as rapidly as desired in the Covina section. Fumigators are offering high wages to laborers.

Working under the direction of Chief Engineer Clarke, a large force is employed in dumping rock in the 90-foot break in the weir in the Colorado River in the Imperial Valley.

The picking and drying of prunes is in full swing at Banning. The season in this section is about three weeks late, and it is hoped the rains will hold off until the crop is harvested.

## The Coast

Polk County, Oregon, has a very light hop crop this year.

Farmers' Week at Caldwell, Idaho, will be the fourth week in October.

Wheat growers of the Northwestern states are asking a Pacific coast basis of \$2.20.

Southern Arizona has had her long desired rains and everybody is feeling happier.

Twenty silos have been built in Grays Harbor County, Washington, during the past year.

The Arizona Cattle Growers' Association is listing with its secretary all salable stock of members.

The Water Users' Association of Boise, Idaho, held its annual picnic at Larson's Grove, near Caldwell this week.

Potato growers in various sections of Idaho are complaining because of the sprouting of young potatoes in the ground.

The production of cherry juice in the Boise Valley, Idaho, which had its initial trial about two years ago, promises to become a permanent industry.

A big cattle company at Cananea, Mexico, has bought beet top pasturage in Butte County and will move 1500 head of cattle up from Mexico in a short time.

The schools of Chelan County, Oregon, started several weeks earlier than usual this fall, expecting to take a vacation during apple harvest in October so that the children can work.

Windmills are to be used in reclaiming marsh lands north of Klamath Falls, Ore. The windmills will be installed so as to pump off the winter flood waters at the earliest date possible in the spring.

The executive committee of the Cattle and Horse Raisers' Association of Oregon is now making a tour of the state. They will be at Bly on the 28th, at Ft. Klamath on the 29th and at Prineville October 1.

A boys' cow testing club is being formed in Arizona under direction of the university. Boys contesting must be between the age of 12 and 16 and must enter at least two cows, keeping records of milk, butter fat and value of feed.

The fourth week in October is to be farmers' week at Caldwell, in connection with boys' and girls school clubs. The week is to be featured by an exhibition of good stock, and the boys and girls are to judge and demonstrate in different lines.

## Who's Who

With the issue of August 11 the Cultivator started its series of "Who's Who" articles to bring before its readers some of the livestock producers of California who are responsible for the large development of the industry. Where did they come from and how long have they been engaged in California development, also how do they look, so pencil and camera are to be used, and some homely, everyday photograph and notes regarding them will bring us closer together. Bear in mind we say "homely photographs" and not photographs of homely people. The idea we wish to convey is that so far as possible we will secure photographs in everyday surroundings at the homes of the livestock producers.

Written for California Cultivator By F. F. Stonerod

CHARLES WILLIS WARD.

COMPARATIVE newcomer to California, Charles W. Ward is more widely known that many men who have been lifelong residents of the Golden State. It might be said that he is a national figure since his name in the world of flowers is as much an authority as that of Luther Burbank in the vegetable world. He has spent most of his 50 odd years in studying and experimenting in the science of breeding plants. He has written several books on carnations and other flower subjects which are used as text books all over the world. Born in Mt. Pleasant, Mich., in the pine timber belt of that state, he grew up in an environment which proved of vast influence in his career. Tramping through the dense Michigan woods in all kinds of weather, cruising and scal-

East so he could devote his entire time to his new home. He has spent money lavishly in Humboldt County, and knows what he is doing. Like many others, he claims that this part of the state is one of the finest dairy sections in the world, and there are few who will dispute the assertion.

Mr. Ward backed up his faith in Humboldt's future by purchasing the finest lot of registered Jersey cattle he could find. He went to his friend Charles Pratt, the man who owns the world's champion Jersey cow, Doson Park Lily, and persuaded him to sell two of her daughters. He wanted four but could only get two. Then he went to Hugh Van Pelt, the famous dairy judge and breeder of Waterloo, and after using the same persuasive methods as those used on Mr. Pratt, succeeded in getting 19 head of Mr. Van Pelt's finest cows. Together with another lot of cows and bulls selected from Eastern herds with the assistance of an expert, this bunch of Island cows was shipped to Mr. Ward's ranch near Carlotta, where they are adapting themselves to that ideal climate, which is so much like that of the Island of Jersey.

It is worth any man's time to listen to Mr. Ward's theories on the science of breeding. He says animals are just like plants and that the same basic principles used with success in breeding flowers and plants should be used in breeding animals.

Mr. Ward is doing big things in Humboldt County, and California is fortunate indeed in attracting a man of his caliber, and the livestock industry, particularly the dairy end, will feel his influence when his herd becomes acclimated and his plans are perfected.

Charles Willis Ward

ing timber, establishing lumber camps, were just a few of the incidents in his boyhood days. He has never lost his love for Mother Nature, and one of his first big investments after coming to Humboldt County a few years ago was to purchase 5000 acres of redwoods on the Klamath River, where he had a hunting lodge built. Mr. Ward and Luther Burbank are close friends. They are never happier than when they steal off to Mr. Ward's mountain home, where they can talk about plants and flowers without any fear of interruption.

Mr. Ward owns a 50,000-acre game refuge in Louisiana, is heavily interested in oil, has coal mines in West Virginia, and numerous other investments in different parts of the country. He has traveled extensively and is one of the most interesting of men to talk to for this reason. Of late years his health has not been of the best, and after seeking several places to find relief for his particular ailment he struck Humboldt County and realized that was the place he had been looking for. He immediately set to work to sever his connection with many of his principal interests in the

### THE KIND OF COWS THAT PAID

The American Jersey Cattle Club at one time reported a Jersey cow which once attracted the attention of the dairy world by her remarkable performance, in which she displayed how early maturity and persistence can be combined to a most satisfactory degree. Up to this time she is still the "nonesuch" of all dairy cows in this particular class, but her record is threatened by another promising Jersey. The newcomer is Salee Golden Lucy, and she shows ability as a youngster and for persistence. The records and the order in which they were made are given here, as produced at one year eight months, 8738.6 pounds of milk, 435.3 pounds of fat. At two years eleven months, 11,891.1 pounds of milk, 609.6 pounds of fat. At four years three months, 12,543.6 pounds of milk, 653.5 pounds of fat, and at five years seven months, 11,763.9 pounds of milk, 600.8 pounds of fat.

Lucy's records show that she produced 2874.1 pounds of commercial butter before reaching her prime as a dairy cow.

Dairymen and farmers of Thurston County, Washington, have formed a dairy and farm produce association for marketing purposes.

# Breed Leaders

Every breed of live stock has its outstanding character the same as the human kind. A great dairy cow has proved her ability to produce anywhere up to 15 tons of milk annually; the trotting horse has secured his record around two minutes; the beefmaker has shown his ability to make the least amount of feed into the greatest amount of food; swine, sheep and others of the live stock family have shown themselves great characters. In addition—and here is where their worth is proven—these animals can transmit their productive power to their offspring.

Beginning with the issue of August 4 the Cultivator gave an account of Pietertje Bloom of the university farm dairy herd. Some things she has done and more that her daughters have done were chronicled. She was a most worthy leader in this series of articles. Others of her kind follow. More of the "handsome is as handsome does" type of animals will be given in the columns of the Cultivator during the next few months.

Written for California Cultivator By C. L. Hughes.

### SIR SKYLARK ORMSBY HENGERVERELD.

**P**ASSING through several different ownerships, standing for the greater part of his life in grade dairy herds, and in spite of these handicaps forcing his way to a point that compels recognition of him as a breed leader, such in brief is the story of the grand old Holstein sire, Sir Skylark Ormsby Hengerveld 39138, owned by Frank Hatch, Modesto. And it is fitting that in his closing years he should be owned by the man whose belief in him has in no small measure contributed to his success as a sire. For while he did not own him

stands at the head of all sires on the Pacific Coast, for he is the only sire that has three 30-pound daughters, also the only sire on the Pacific coast that has two 30-pound daughters and a 30-pound granddaughter all under mature age.

The records of his entire list of tested daughters average over 23 pounds butter in seven days, and many of them were made at past the age at which the average cow makes her high record.

Following is a list of his seven leading daughters, with seven-day milk and butter records and age at which test was made:

Gerben Abbekerk Maid, five years,

Sir Skylark Ormsby Hengerveld

for many years Mr. Hatch paid service fees to breed some of his cows to him, and from these matings have come some of Skylark's best daughters.

As an individual Sir Skylark Ormsby Hengerveld ranks high, and he transmits excellent type, as those who have seen any number of his sons and daughters know.

And in breeding he carries the blood lines that have made a number of world's champions. He is sired by Sir Ormsby Hengerveld De Kol, whose daughters include five with records above 30 pounds butter in seven days, among them the former world's record cow and wonderful transmitting dam, Pietertje Maid Ormsby, 35.56 pounds butter in seven days, 145.66 pounds butter in 30 days. Sir Skylark Ormsby Hengerveld is also over 50 per cent the same blood as the sire of the present world's champion butter producer, Duchess Skylark Ormsby, 1506.36 pounds butter in one year.

Thus this great bull inherits the tendencies to high production that should carry him to a high place as a sire, and he has reached the heights but under very great difficulties. With only a limited number of cows bred to him, none of them high record cows themselves, and with the offspring scattered in many different herds and his daughters tested out in as many different hands, he now has a list of 26 A. R. O. daughters, a number equalled by only one other sire in California.

In number of 30-pound daughters Sir Skylark Ormsby Hengerveld

686.9 pounds milk, 34.2 pounds butter; Christeria Overton Mechthilde 4th, four and one-half years, 463 pounds milk, 31.69 pounds butter; Belle Josephine Ormsby, ten years, 543.4 pounds milk, 31.57 pounds butter (in 365 days at nine years of age, 27,678.4 pounds milk, 1127.80 pounds butter, highest yearly butter record in Northwest); Belle Setske Josephine 2d, five years, 506.8 pounds milk, 28.19 pounds butter; Christeria Ormsby Hengerveld, six years, 445.6 pounds milk, 25.92 pounds butter; Ormsby Cristeria Mechthilde, seven years, 485.3 pounds milk, 25.90 pounds butter; Sir Skylark May Peoples, seven years, 579.4 pounds milk, 25.72 pounds butter.

His highest record daughter, Gerben Abbekerk Maid, made an official record of 30.10 pounds butter in seven days as a four-year-old, and freshening again within 12 months made the 34-pound record listed above.

A senior three-year-old granddaughter of Sir Skylark Ormsby Hengerveld, Stanislaus Princess Cleopatra, was for a time the California leader in her class, with an official record of 31.04 pounds butter from 513.9 pounds milk in seven days, and she still has the second highest senior three-year-old record in California.

**LONG MOHAIR**

At the time of the P. P. I. E. the Cultivator gave illustration of "Dodo," exhibited at the world's exposition, who had a fleece measuring 41 inches in length which sold for \$372. At the recent state fair Dodo's half brother, Leo, owned by Mr. Pierce of Oregon, was exhibited. His fleece was 35 inches in length. After the removal of the fleece he was sold to George Moody, a California breeder.

# Calf Scours

## This Treatment is Saving Many Calves

Scouring calves indicate a germ infection that is likely to run through your entire herd with serious losses.

The loss of one calf is bad enough, but nothing compared to your loss when the infection spreads, as it will unless checked. Then your year's work in building up your herd is wasted and your profits lost.

Our method of handling calves will promptly stop scours and finally banish it from the premises. One good calf saved will repay the expense of protecting your stock for a long time against the disease. This plan is simple and practical.

Our germicide and disinfectant is especially adapted to this work. It is called Bacili-Kil (B-K for short). The remarkable germ-killing strength of B-K is plainly marked and guaranteed on every package. B-K contains no poison, acid or oil. When used internally it destroys germs, heals inflamed membranes, relieves irritation, restores healthy action. B-K may be given freely in the milk and drinking water.

B-K is convenient. Just add water as directed, and you have your treatment for calves, bulls and cows and also your disinfectant for general use.

B-K is used so successfully by leading breeders that it is now sold over the entire world and the demand for it has increased five hundred per cent in three years. A well known breeder of registered stock says:

**Clean and clear as water**

"We found vaccines of no value in stopping calf scours, but the prompt, efficient treatment with B-K checked the trouble quickly and saved us the loss of many valuable calves."

B-K is sold by dairy and farm supply houses, druggists, general stores, etc., everywhere. Dealers wanted in every town.

Write us for more evidence from users and for our bulletin No. 136, "How to Save Every Calf."

## Hereford Men Meet at Sacramento

Written for California Cultivator By F. F. Stonerod

If the Hereford exhibit at Sacramento suffered by comparison with some of the other breeds in number of animals shown, the lovers of the Whiteface cattle were out in force at the meeting held at Sacramento and determined that next year will have a different story to tell. The fact of the matter is that the demand for Herefords in this state has been so broad that the comparatively few breeders of registered stock have been sold out of surplus stock and are unable to replace it with fresh blood. But a number of new herds have been established the past year, and more are in the making, so that we are looking for a much larger ex-

hibit at next year's shows. Cattlemen from all over the southwest came to Sacramento and were overjoyed to see that the breeders had made such a creditable showing. Gov. Packard of Arizona made the long trip from Phoenix and was one of the boys all week. He could be found any time around Hereford headquarters.

President Gable presided at the banquet Tuesday night, which was attended by more than 30 Hereford men. Professor G. H. True, of the state experiment station made a stirring address in which he said that the Hereford had proved itself to be the ideal breed under our peculiar range conditions, and that this breed could make more meat off the same amount of ground than any other. D. O. Lively talked about the popularity of the Hereford from Texas to Montana in the days when he rode the range. He said that such famous ranches as the King and Good Night, Bar L, and others of over a million acres, bought Hereford bulls by the thousand. Professor Caine, who judged the beef classes, said that breeders should sacrifice little points of fashion in breeding at this time, or

until the world shortage of meat animals was relieved. He advised: "Work toward the early maturing, rugged, meat-making type and get away from too much pedigree, fancy markings, etc." W. D. Duke of Likely, told how he sold off hundreds of purebred bulls every year at reasonable prices in order to get Hereford sires on the range. He said he could have sold three times as many had he had them. Clifford B. Harris, eldest son of Overton Harris, and one of the famous Hereford men of the country, gave an interesting talk about high priced cattle and why they were high priced. He said that the day had passed when you could secure proven breeding blood for a song. If the purchaser thought too long about the price somebody else stepped in and got the animal. He said the California breeder was asking too little for his best quality stuff because the wonderful improvement a good sire can make on a bunch of ordinary range cows in one season was proof of its value.

Other meetings will be called from time to time, sales will be discussed, and when all the owners of purebred Herefords on the Pacific Coast join the association it will be strong enough to accomplish big things. Certainly it has made an auspicious start.

## Butter and Cheese Scoring Contest

By H. S. Baird

Twenty-three cubes of butter, 25 cheese and 81 samples of milk and cream were entered in the state fair contests. The number of butter entries was smaller than usual. A great deal of interest was taken in the milk and cream contest and considerable credit is due the various city and state dairy and milk inspectors for their efforts in assisting in the promotion of the contest.

P. Peterson of the Valley Flower Creamery, Ferndale, received high score on butter with 93%. High scores on cheese were as follows: Cheddar, John Reber, Watson Cheese Factory, Belber, 93%; California (Granular), R. N. Weedmark, University Farm, Davis 92; Jack, Chas. Basciarini, Dixon, 93; Imitation Swiss; Chas. Basciarini, Dixon, 92.

The butter and cheese judging contest was won by Ed Hooper of San Francisco.

The judging of butter and cheese was done by G. E. Frevert of the United States department of agriculture, T. J. Harris, official inspector of the San Francisco Wholesale Dairy Produce Exchange, S. L. Denning and H. S. Baird of the dairy division, University Farm, Davis.

The milk and cream was judged by C. F. Hoyt, milk specialist, of the United States department of agriculture and Dr. Geo. Hart of the veterinary division, University of California.

In the butter awards Creameryman Ed Hooper of Spreckels Creamery, San Francisco, G. G. Plunkett, Exeter Creamery, and W. J. Grinsell, Loleta Creamery, made highest scores each with a score of 93. Other high scoring butter was exhibited by H. Downs, University Farm Creamery, 92½; J. T. Hague, McCloud Dairy, 92½; John Canaham, Manchester Creamery, 92½; H. E. Nelson, Gold Medal Creamery, Stockton, 92; J. E. Thorp, Lockeford, 92; Geo. Foltz, Red Bluff Creamery, 91½. Five other scores ranged above 90.

Cheddar Cheese scored from 87½ to 90½.

Jack Cheese from 88 to 91.

Market milk exhibits showed some remarkably fine milk. One score was 96.9. Sixteen others were all above 90.

Pasteurized milk scored from 90.5 to 97.

Guaranteed milk scored even higher than certified milk. There were five exhibits of the guaranteed, showing from 91.2 to 96.6.

Certified cream scored 94.2 and guaranteed cream 96.6.

Display of creamery butter was made by John Canaham of Manchester.

General display of products was awarded first to fourth places in order given: University Farm, Davis; G. Basciarini, Dixon, John Canaham, Manchester, and Chris. Holbeck, Gal.

S. L. Denning, who was one of the judges, makes the following comments on the butter:

"The butter of this scoring was very good in quality. The average of the 23 cubes was 92.31 per cent while 74.7 per cent scored 92 or above. No entry scored below 90. One of the most common defects was the curd flavor. This usually comes from too thin cream or from over-ripe starter and is very objectionable. In some sections of the state where very thick cream is received this flavor can be expected. When the starter becomes a little old or over-ripe it is best to churn without it because a starter in this condition will do more harm than good. Some of the entries lacked flavor and a few were flat. Some of these appeared to have received an excessive amount of washing, making a sweet cream butter very good results can be obtained by little washing. Too much washing takes out the fine delicate butter flavors. A few of the cubes had a bitter flavor suggesting the use of neutralizer. The feed flavors were again noticeable in

## Santa Anita Rancho

Anoakia Breeding Farm

ARABIAN THOROUGHBREDS: Two-year-olds, sired by imported Stallion Ibn are the choicest thoroughbred mares on Santa Anita Rancho.

SADDLE HORSES: Some of which were sired by Ibn Mahru, world renowned imported desert stallion, and Don Castano, a five-gaited Kentucky saddle stallion. These horses are mostly three-year-olds.

POLAND-CHINA AND BERKSHIRE BOARS: Four to nine months old. Sired by famous Poland-China herd boars, Banker's Boy and Glenview Wonder. And Berkshire boars, Kintyre Laird, Grandson's Duke and Fashion's Longfellow 5th. The dams are from the best blood lines. Most all these animals have winnings at World's Fair. Write for catalogue.

BULLS

not so prominent as in some previous scorings.

The body was very good although a few of the entries were cut for being greasy. Several had a very leaky body and a few were sticky and gummy. The body together with the color indicated that a great many of the buttermakers made special churnings for the exhibit. Of the 23 entries ten, or 43 per cent, criticised for

being mottled. Some of the entries would have scored much higher had it not been for the mottle. A tallowy brittle body was also common indicating that excessively cold wash water had been used. The cubes were very uniform in size and shape and as a whole made a very good appearance."

The next contest will be held at Davis during the special buttermakers two weeks short course which begins November 5, 1917.

## Shorthorn Breeders Banquet

Written for California Cultivator By F. F. Stonerod

For an organization that has been in existence for but a few months the California Shorthorn Breeders' Association has accomplished a great deal.

During fair week at Sacramento the men and women identified with the association got together in an informal banquet at the Travelers hotel and discussed matters of importance and listened to some excellent addresses. After the banquet an interesting and instructive motion picture of the 1916 International Shorthorn show was thrown on the screen. Those present could easily imagine themselves at this great show where the best in the land is annually exhibited. This was Mr. Stollery's idea and the pictures were well worth seeing.

President A. W. Foster called the meeting to order and presented such well known men as ex-Assistant Secretary Cowan of the American Shorthorn Breeders' Association, Frank Brown of Carleton, Oregon, and others. Mr. Cowan's talk was confined to the earlier history of the Shorthorn in California and evidenced a knowledge of the subject both broad and thorough. He impressed those present with the importance of improving grade cattle, and that the pure breeds would take care of themselves. Mr. Foster favored annual stock shows at both San Francisco and Los Angeles and said he would be the first one to support the movement when it was appropriate, that nothing but the labor and war troubles prevented shows this year.

Frank Brown was asked to tell how

the stock shows at Portland, Oregon, improved the popularity of pure bred stock, and also as to the value of combination sales made up from the herds of the individual breeders. This question has been agitated many times in California but until the breeders organized nothing tangible came of it. After the meeting adjourned several of those present got together and talked about the advisability of holding a sale of Shorthorn cattle during the land show at San Francisco in October. C. N. Hawkins, Mr. McDonnell, Mr. Stollery, and several others were heartily in favor of holding the sale, and while some expressed doubts as to the advisability of such a movement the result of the discussion was that Mr. Stollery was charged with investigating the feasibility and expense of holding the sale and he wired back from San Francisco a few days later that the sale could be held, and in all probability will be. Some of the breeders will have to sacrifice stock to put it in this sale as females are mighty scarce in California—it is a buying rather than a selling market. However, as Mr. Hawkins said, if we never make a start we cannot hope to get anywhere and once these sales are made a fixed feature of our shows they will be well worth the initial sacrifices.

One cannot fail to see the awakening interest in livestock affairs in California. Shows, sales, and cooperation are coming apace and it will not be long before we will have solved many of the vexing problems of the past.

## Swine Awards at the State Fair

### Poland-Chinas

Exhibitors securing awards—J. H. Hansbrough, Modesto; H. I. Marsh, Modesto; John M. Bernstein, Hanford; M. Bassett, Hanford; E. Miner, Lodi; W. Bernstein, Hanford; Raymond Beckman, Lodi; George V. Beckman & Sons, Lodi; A. L. Bassett, Hanford; Fred. D. Ross, Hanford; Howard C. Peterson, Reedley; W. A. Young, Lodi.

The awards:  
Boars, two years old or over—1, J. H. Hansbrough on Major Hadley Wonder; 2, Marsh on L. B. A. Wonder; 3, Bernstein on President; 4, M. Bassett on Chief Victor; 5, M. Bassett on Model Fellow.  
Boars, junior yearling—1, M. Bassett on Surprise; 2, Miner on Ursus Jr.; 3, Marsh on Smooth Orphan.  
Boars, junior yearling—1, Bernstein on Rosebud Chief 1st; 2, M. Bassett on Spell's Corridor; 3, M. Bassett on Hustler's Model 2nd; 4, Raymond Beckman on Duke of Lakeside; 5, Beckman & Sons on C's Charmer.  
Boars, senior pig—1, A. L. Bassett on Model Wonder; 2, W. Bernstein on King's Lad; 3, Ross on Panama Prince; 4, M. Bassett on Wonderful Victor; 5, Bernstein on Some Revenue.  
Boars, junior pigs—1, A. L. Bassett on Big Bone Hustler; 2, M. Bassett on Hustler's Chief; 3, M. Bassett on Wonderful Hustler; 4, Marsh on Giant Wonder; 5, Marsh on Major Wonder.

Sows, two years old or over—1, Bernstein on King's Rosebud; 2, M. Bassett on Dewdrop; 3, Marsh on Big Beauty; 4, Bernstein on Candy Kid; 5, M. Bassett on Gold Drop.  
Sows, senior yearling—1, Bernstein on Sunshine Maid; 2, Bernstein on Lillie B; 3, Marsh on Miss Giantess; 4, Ross on Silver Bell; 5, Bassett on Wonderful 2nd.  
Sow, junior yearling—1, Bassett on Good Style; 2, Bernstein on Ruby B; 3, Bassett on Hustler's Girl; 4, Bernstein on King's Rosebud 2nd; 5, Hansbrough on Queen Bess Hadley.  
Sow, senior pig—1, Bassett on Long Model; 2, Bernstein on Belle of Revenue; 3, Miner on Mollie Giantess; 4, Peterson on Bell of Fowler;

5, Bassett on Wonderful Style.  
Sow, junior pig—1, Young on Major's Lady; 2, Young on Fairview Model; 3, Marsh on I. B. A. Wonder—Miss Countess, gilt; 4, Bassett on Lady Chief; 5, Bassett on Perfect Lady.

Herds, over one year—1, Bernstein on Rosebud's Chief, Candy Kid, King's Rosebud, Sunshine Maid; 2, Marsh on I. B. A. Wonder, Miss Giantess, Miss Graver, Model Giantess; 3, Bassett on Surprise, Dewdrop, Black Beauty 2nd, Wonderful 2nd.  
Herds, under one year—Bassett on Model Wonder, Model Lady, Long Model, Miss Big Bone; 2, Bernstein on The Kid II, Candy Bess, Belle of Revenue, Baxie's Beauty; 3, Bassett on Miss Quality Victor, Wonderful Style, Good Style, Wonderful Victor.  
Herds, boar and three sows, bred by exhibitor—1, Bassett on Model Wonder, Model Lady, Long Model, Miss Big Bone; 2, Bernstein on The Kid II, Candy Bess, Belle of Revenue, Baxie's Beauty; 3, Bassett on Wonderful Victor, Wonderful Style, Good Style; Un-named.

Get of sire—1, Bernstein on get of President, Lilly B, Ruby B, Hanford Maid; 2, Marsh on get of model Major, Major Hadley Wonder, Miss Giantess, Model Giantess, Miss Giantess; 3, Bassett on get of Chief Victor, Wonderful Style, Good Style, Miss Quality Victor, Wonderful Victor.  
Produce of dam—1, Bassett on produce of Miss Quality Style, Wonderful Style, Good Style, Un-named, Wonderful Victor; 2, produce of Chief's Lady, Hustler's Chief, Wonderful Hustler, Lady Chief, Perfect; Perfect Lady; 3, Bassett on produce of Morning Glory, Giant Hustler, Big Bone Hustler, Miss Big Bone, Mammoth Hustler.

Senior champion boar—1, Hansbrough on Major Hadley Wonder; 2, Bernstein on Rosebud Chief 1st.  
Junior champion boar—1, Bassett on Model Wonder; 2, Bassett on Big Bone Hustler.  
Senior champion sow—1, Bernstein on King's Rosebud; 2, Bernstein on Sunshine Maid.

## Stanislaus County Holds Big Stock Show and Exposition

Written for California Cultivator By F. F. Stonerod.

**S**TANISLAUS county's remarkable growth in the past few years and her rise to the position of the leading county in dairy products in the state was due to two factors—intensive farming and co-operation in marketing.

It was the get-together spirit of the business men of Modesto and the producers which made the live stock show last year the banner one of the

state next to Sacramento. That show paid a profit of over \$2000. This year the second annual show will do even better, because it was bigger and better in every way.

It was to be expected that Stanislaus would be strong in the dairy classes, but to see 50 more Holstein entries than they had had at Sacramento this year was amazing to say the least. The Jerseys were strong, too; so were the swine. Revada Farms

sent down their state fair string of prize-winning Guernseys; L. H. Smith showed for the first time and E. A. Couture, a new Stanislaus Guernsey man, brought out a few choice ones; McFarland had his Ayrshires on deck, and Alexander & Kellogg exhibited dairy Shorthorns, the first time this section of the state has had an opportunity to see the dual purpose cattle. One could write indefinitely about the other exhibits, the melons, corn, fruits, grains, etc., all of which are produced so abundantly in this great county, but space does not permit. If other California counties will establish animal fairs and stock shows of the same class as Stanislaus we will in time measure up to any state in the country. The movement has been

a long time coming, and now that it is here it deserves the support of our legislature and of business interests.

### The Cattle Show.

Probably there was never a greater reversal of judges' decisions in several of the classes at Modesto and Sacramento. Evidently the college men of Minnesota and Kansas differ widely in their judgment of dairy stock. Animals which won firsts and even championships at Sacramento finished third and fourth in Modesto, and vice versa. As one prominent breeder said, "I should think there would be more consistency in tying ribbons and not such a difference in type. Really, I expected to learn a few things about show animals, but I confess I am all at sea." But the judges' decisions were impartial and generally satisfactory at both fairs, and both judges are considered authorities.

### Holsteins.

The lineup of Holstein entries in some of the classes, notably aged cows, and in fact all the other classes except bulls, was a sight to be remembered. Eight, ten and even twelve head was a common occurrence, and the quality was there, too. The sensation of the show was the winning of the junior and grand champion ribbons by Bridgford Company's two-months-old heifer, Princess Inka Butter Girl 360987, a daughter of Segis Bergsma Butterboy. Judge Reed pronounced her one of the finest young matrons he had ever seen in a show ring and placed her above two remarkably fine cows in their class. Both the Gibson and the Bridgford herds were large winners at Modesto, but they did not get everything. George Kounias led his aged bull, King Korndyke Hengerveld Ormsby VII, into the ring in the morning and won first prize. Benoit finished second and Gibson third. When the championships came up for decision the Kounias bull had to compete with Bridgford's grand champion at the state fair and also the nine-months-old senior bull calf, King Sergis Alcartra De Kol Pledge 207033. Professor Reed walked around and around and examined every point of each individual, and after considering for perhaps 20 minutes tied the grand championship purple on the Kounias bull. It was quite a feather in the cap of this enthusiastic young breeder to win the coveted prize and every one present, including his rival exhibitors, congratulated him like the good losers they are.

The aged cow class was a wonder. Here again the judge placed the Sacramento grand champion cow down the line and tied the ribbon on J. W. Benoit's Vera—Walhalla Princess 224170, a five-year-old daughter of Acme Pontiac. She had but recently freshened and carried a wonderful udder and superb condition. This is the cow which the Bridgford Company beat for grand championship with the nine-months-old heifer, so it will be seen what the judge thought of the champion. The Gibson Company was strong in the young stuff and won many firsts. There were 125 Holsteins entered at this fair, 50 head more than in Sacramento.

### The Jerseys.

The Jerseys at Modesto were not far behind the Holsteins in point of numbers. This section is a Jersey stronghold and many state production records and show yard championships originated in the vicinity of Modesto. Professor Reed made the statement to the writer that he was in favor of showing a bull's get before the bull himself was shown, or, better still, to show both together. He said that he was agitating the matter with the Eastern show authorities. Many times a blue ribbon is given a sire whose get fails to get in the money and bulls who leave the unmistakable stamp of quality and transmitting ability on their get are placed down the line. This theory was demonstrated to be sound in the case of the Gibson Company's aged bull in the Holstein class, where he was placed third, and yet his get won consistently all afternoon.

Old Altama Interest, owned by the sterling Jersey breeder, Guy Miller, came into his own again after a sleep at Sacramento, where a strict Island type bull beat him. At Mo-

King Pontiac Netherland Segis

Daughter of a 28 Pound Cow

## 22 Splendid Bulls

will be sold during the two day sale of registered Holsteins at McClure Farm, Santa Ana, Cal., including

### 14 Grandsons of King of the Pontiacs

**Dairymen:** Grasp this opportunity to buy at your own price this splendid dairy blood.

**Breeders:** You will find in this sale bulls fit to head good registered herds. Note especially the great son of King of the Pontiacs, the son of a 34 pound cow; and the younger bulls out of young dams that are bound to increase their records.

Consult the list at the right and you will agree with us that no better blood has ever been offered to you.

And remember that great as the bull opportunities in this sale will be they are fully matched by the great female offering in this sale of

## 125 Registered Holsteins

McCLURE FARM, Santa Ana, Cal.

Tuesday and Wednesday, Oct. 16-17, 1917

which will include

- A 28 pound cow and her three daughters.
- A full sister to a 31 pound junior four year old.
- 18 granddaughters of King of the Pontiacs.
- A granddaughter of Rag Apple Korndyke 8th.
- A granddaughter of Tilly Alcartra.
- Four heifers sired by a 29 pound grandson of King Segis.
- 12 A. R. O. cows with records up to 28.43 pounds butter.
- A granddaughter of King Segis Pontiac. Her seven nearest dams all A. R. O. cows with records averaging 23.10 pounds butter in seven days.
- A granddaughter of Hengerveld De Kol, heavy in calf to a son of King of the Pontiacs.
- A granddaughter of Sarcastic Lad heavy in calf to a grandson of King of the Pontiacs.
- Splendid cows and heifers bred to King Pontiac Netherland Segis.
- Richly bred cows and heifers in calf to a son of Colantha Sir Aaggie, and whose dam is a 28 pound daughter of Colantha Johanna Lad.

This sale includes the complete dispersal sale of the herds of Ernest Otto McClure, Santa Ana; A. Satterberg, San Jacinto; and P. H. Jarrett, Lancaster; augmented by choice consignments from McAllister & Sons, Chino; Santa Anita Rancho, Santa Anita; R. Nadeau, Saugus; and Aro Farm, Buena Park.

Every animal over six months of age tuberculin tested and has individual certificate. Write for catalog.

## Bulls in This Sale:

King Pontiac Netherland Segis, son of King of the Pontiacs and out of a good daughter of King Segis Pontiac. One of the last chances in the west to buy a son of King of the Pontiacs.

The first son of the great Colantha Johanna Lad ever offered at public sale in the west, and he is out of a granddaughter of Pontiac Korndyke.

A son of King Morco Alcartra, son of Tilly Alcartra, and out of a 17.31 pound two year old daughter of Prince Gelsche Walker.

A Son of Segis Pontiac De Kol Burke, son of Riverside Sadie De Kol Burke, out of a 634.48 yearly butter record junior two year old daughter of Korndyke Queen De Kol's Prince.

A son of King Korndyke Pontiac, out of a 22.88 pound junior three year old daughter of Colantha Sir Pontiac Aaggie, whose A. R. O. daughters include a 32 pound junior three year old.

A son of King Korndyke Pontiac out of a 19.05 pound junior three year old daughter of Prince Gelsche Walker, and her dam made over 1000 pounds butter in one year, has a daughter that made over 1000 pounds butter in one year, and she in turn has a daughter that promises to complete the first three generations of 1000 pound butter cows.

A grandson of Aaggie Cornucopia 3d's Lillith, out of a 34 pound daughter of Sir Sadie Cornucopia.

A son of King Pontiac Topsy out of an 18.22 pound junior four year old daughter of Pieterje Hengerveld's Count De Kol.

A grandson of Juliana King of Riverside out of an A. R. O. dam.

A son of King Segis Pontiac Jannek out of a daughter of King Hengerveld Segis 8th.

A son of King Segis Pontiac Jannek out of an 18 pound junior three year old daughter of a 21 pound cow.

A son of Judge Hengerveld De Kol 6th out of a granddaughter of Pontiac Hengerveld Parthenon.

Ten sons of King Pontiac Netherland Segis, out of well bred dams, many with good A. R. O. records.

desto the judge considered capacity before he considered anything else, and in this many time champion, son of Golden Interest, he found not only capacity but rugged constitution and all the other good points which go to make up the ideal dairy sire. He won senior and grand champion honors. His son, Exile of Rico Vegas, won first senior bull calf and reserve grand champion bull. His get won consistently in strong competition, and so Mr. Miller has reason to be proud of his record.

Mr. Miller also won grand champion cow on Goldie of Venadera. L. J. Dobbler won reserve grand champion cow on Signalas Little Beauty. J. A. Goodall and B. D. Hayworth won a

bunch of first premiums. Mr. Hayworth won get of sire also and was second in produce of cow. Altogether it was a fine Jersey show and worth going miles to see.

The other classes had not yet been judged when this was dispatched to the editor, but will be reported as soon as possible. Delay in developing and printing photographs of principal prize winners so they could be identified properly and mailed to the California Cultivator is to be regretted. The Cultivator is using every effort to cover the many fairs and shows, and trusts any mistakes or delays in getting the material into the office may be pardoned by the exhibitors.

## Questions and Answers

ANSWERS BY EDITOR AND STAFF

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

### Growth in Turkey's Crop

I am losing my half-grown turkeys. A pocket forms in the crop which holds the food, causing the turkey to strain all over trying to swallow. The pocket grows from the esophagus, is tough and yellowish, in layers like paper. The birds are in good condition, have plenty of barley pasture, alfalfa, gravel and lime.—Reader, Wil-lows.

I should look to the feed for the cause of this growth in the crop. Barley as the exclusive grain diet often causes digestive troubles and may have something to do with this. I do not understand what is meant when you say lime is part of the ration. If you mean oyster or clam shell, which contains lime, well and good. If you mean slaked lime, you may have right here the cause of the whole trouble. Slaked lime is extremely irritating, to say the least, and is not suitable feed for fewls or turkeys. I should cut out both lime and barley, feed wheat or corn (or one of the sorghums if these are too expensive) for the grain feed and oyster shell instead of lime. Once a week in order to supply bone-making material give a hopper of bran mixed with about ten per cent fine bone meal. Rolled oats chopped with onions or onion tops are very wholesome for turkeys of all ages, and would be a good ration for the birds which show signs of illness. The only remedy in such cases as this is removal of the cause.—J. A. K.

### Horse Beans

Answering query as to planting horse beans in the Downey section, D. F. Reichard writes:

"Horse beans, properly called Broad Windsor beans, are successfully grown about Downey as well as other Southern California sections for a winter crop. They are planted from the middle of September or preferably before November 15, although they are planted at any time during the cooler months until the first of April. The Windsor beans are grown in Southern California mostly as a green bean for shelling, as limas are used in the green state. There is no reason, however, why they should not be grown for dry beans. The dry beans are grown in the northern part of the state very extensively. Although planted early the dry beans would not be ready to harvest until late in May or in June.

Early planted beans, that is, those planted before any heavy rains have come, will necessarily have to be planted in ground that has been previously thoroughly irrigated and worked. Drop the seed four to six

inches apart in rows two and a half to three feet apart. Unless a goodly rain falls by the time the beans are four to six inches high they should be irrigated between the rows, after which give them thorough cultivation and a good weeding. A light cultivation after each rainstorm should carry them to maturity unless there should be an exceedingly dry season. Wind-sors are harvested much the same as limas, either by machinery or by tramping or flailing. The stalks are larger and the beans hold to the pod a little harder than lima beans. The average production is ten to twelve hundred pounds per acre. The threshed dry beans sell for from four to six cents, according to the demand. They are used extensively as a filler for coffee and are become popular also as a cover crop plant.

### Jerseys and Holsteins

Please give the points of pure bred Jerseys and Holsteins. Do they have regular color? — Subscriber, Valley Springs.

To give the full scale of points of both these breeds would require several columns. If one wishes the exact information we would recommend writing the American Jersey Cattle Club, 324 West 23rd Street, New York, or the Holstein-Friesian Association, Malcolm H. Gardner, Superintendent of Advanced Registry, Delevan, Wisconsin. In a general way, we may say that the Holstein is much the larger cow, always black and white, and no two spotted alike. The Jerseys may be a very light fawn color or almost a black.

### Estimated Weight of Sorghum Grains

Will you please give cubic contents or measurement of a ton of Egyptian corn or red milo maize as gathered in the head. I believe there should be some method of measuring these, the same as hay.—Subscriber, Klink.

This is a new question which we will pass on to our subscribers. Have any investigated? The rule for measuring corn on the cob in cribs is: "Multiply the length of the crib in inches by the breadth in inches, and that again by the height in inches, and divide the product by 2478 (the number of cubic inches in a heaped bushel), and the quotient will be the number of bushels of ears. Take two thirds of the quotient for the number of bushels of shelled corn." This is only a hint and perhaps of little value in determining cubic contents of a ton of Indian corn. The measuring of hay depends so much on the variety, the length of time it has settled in stack or mow, and other factors, that the number of cubic feet to the ton varies from 400 to 500, while a ton of light straw may measure a thousand cubic feet, therefore a correct estimate requires considerable

judgment. The same would be true as to a ton of Egyptian or milo. Some heads are looser than others.

### Drying Prunes

Can you give the location of a prune drying plant in California?—Subscriber, Norwalk.

Prunes are often dried near the orchard by the owner, or sometimes in community yards, but always as near the orchard as possible. The prune drying sections are in the Santa Clara Valley and in the northern end of the Sacramento Valley.

### RACES AT RIVERSIDE FAIR

There will be races of all kinds at Riverside this year and it is certain that something is radically wrong with the individual who does not find something to please him on the racing program. There will be trotting races with the fastest horses on the Pacific Coast entered for purses aggregating over \$4000. The entry list shows that there will be a big field of starters in each event, especially in the 2:11 pace and 2:14 trot, each for a purse of \$800 on Wednesday, October 10.

Every afternoon of the week except Thursday, Indian day, there will be two or more running races. The cow pony race on Wednesday, October 10 will bring forth the best ponies from the ranges of California, Arizona and Nevada. The one mile derby on Friday is certain to be well filled.

Bicycle races are coming back and they will hold the center of the stage at the Riverside fair on each afternoon following the trotting event. There will be two races each day open to the best riders of Southern California. On Thursday, October 11, there will be a five mile invitation team race with teams entered from every city of Southern California. The Riverside county championship race on Saturday, October 13, will serve to bring out the best riders in the county.

Besides the trotting races, the running races, bicycle races and foot races on the opening day there will be daily matinee races.

## Plowing Time

Time to use a Yuba Tractor is when ground is hard and dry, and a lot of power is necessary.

That bull-dog strength gets a hold and pulls the plows deep, turning up 8 to 12 inches of soil for the air to disintegrate and the winter rains to reduce to a mulch.

Yuba Plowing is efficiency scientifically applied.

## Write to Mr. Hoover

Written for California Cultivator By Jean A. Koethen

**T**HE idea is not my own. I wish it were. I am just passing it along from the assistant editor of the American Poultry Advocate, who confesses that it is not original with him, either. But why not write to Mr. Hoover? Why should not every commercial poultryman who is having a hard time to break even, every farmer who finds there is no profit in feeding even the feed he raises himself to his fowls, every fancier who would like to breed better poultry if only

he were sure of a market for it at living prices, every sidelliner and backlotter who would be glad to hatch and rear a nice bunch of fryers or roasters if only he had any certainty of selling them for what it cost to rear them, write to Mr. Hoover and tell him his troubles? Mr. Hoover would never see the letters, to be sure, but he would hear about them, and who knows what he might be able to do to put the industry on its feet?

Last week my milkman left a printed notice to the effect that "the enormous advance in the price of everything necessary in the production and marketing of milk compels us to announce" that on and after Saturday, September 1, the retail price of milk will be seven cents per pint or twelve cents per quart. Do you know how much higher these prices are than those of five years ago? I am depending on my memory for this, and prices always vary more or less, but I am quite certain that five years ago we were getting 12 and sometimes 13 quarts for the dollar, for which we

now receive eight quarts. That is an advance of 50 per cent, isn't it?

Five years ago eggs in Los Angeles sold for 40 and 45 cents a dozen in September. This year they are bringing 50 cents, which is an increase of from 12½ to 25 per cent, according to the place where they are sold, for it is a curious fact that some stores can always get five cents a dozen more for eggs than can others. The "enormous advance" in price of feed hits the poultryman just as hard as it hits the milkman, yet the advance in selling price of eggs has been only about half that of milk.

In other lines of business the difference is even more marked. Our shoes cost us nearly twice what they did two years ago, gingham which sold for 12½ cents a year ago are from 18 to 20 cents now. Everything has gone up but eggs and poultry. For the former we receive, if we are lucky, a 25 per cent advance. The latter have been rather cheaper than usual.

What is the matter with the poultryman? Well, for one thing, he doesn't blow his own trumpet. He has nothing to say about the great value of eggs as food nor about the super-excellence of chicken meat. He doesn't advertise his wares. In the second place, poultrymen have never succeeded in organizing as the milkmen and bakers and butchers have. They just go along, each for himself, each perhaps more or less suspicious of the other fellow. In the third place

he doesn't tell his troubles. I have seen no notices left at anyone's door stating that the poultrymen must have a bigger margin between cost and selling price or go out of business, yet this is the plain, unvarnished truth. Many have gone out of business because they could only continue at a loss. Many tried, in response to the pleading of the government last spring, to increase production, only to find that they must sell their fryers and roasters and old hens for less than it cost to raise them. The poultryman has tried valiantly to do his bit, but he will not try again unless the price of feed can be lowered or the price of eggs raised so that there may be a living margin between.

That is why I say, write to Mr. Hoover. This will not take the place of organization nor of advertising, but it may perhaps clear away some misapprehension on his part. Tell him the poultryman is the most poorly paid of all producers and that he is tired of being the under dog. Tell him we are of all victims of the food speculator the most helpless, for he hits us coming and going. Tell him half the hens in the country have already gone to the butcher and some body will have to go without his egg for breakfast no matter what is done, but that encouragement now will put the poultry industry on its feet and insure eggs for next year if not for this. Tell him all we ask is a square deal.

## Put Yourself in Biddy's Place

Written for California Cultivator By Mrs. Nettie Metcalf

**S**UPPOSING you had one suit of clothes a year, under-clothing included, and that you never got a chance to change or wash them, no matter how filthy they became. Supposing those clothes were infested with vermin as well as filth. Vermin that hatched and multiplied until rest or comfort by day was out of the question. Then supposing the place you slept in was infested with millions of bed bugs so that rest (?) at night was misery, and you will get some little idea of the discomfort of our feathered pets unless we give them the care simple humane common sense demands. The misery many of these flocks endure, and to add insult to injury Biddy is blamed if she doesn't pay. Pay! It's a wonder she lives at all sometimes. And many, many times she doesn't. How quickly we run for the bathroom and a change of clothing throughout if we happen to get a dozen or so mites on us.

"Dear me," some one says, "what very unpleasant language." Yes, dear lady, it is a very unpleasant subject, but none the less necessary to be broached time and time again.

"Animals don't need baths," some one persists, "nature takes care of all that." Just so! Nature does seem to take care of the animals better, for they shed their heavy winter coats when the warm weather comes, but Biddy has to keep hers all the spring and half of the summer so it's our bounden duty to help nature in her case.

Then let our slogan be, "No guilty mite or louse shall escape," and let us, like Rider Haggard's doughty Zulu chieftain, Umslopogaas, find our heaven as he expected to find his, a place where we can kill, and kill, until every mite and louse is exterminated; then let us wait a week or ten days and kill all that have hatched out meantime.

To begin the battle, let us stock up with gallons and gallons of kerosene. Don't put it on with a machine oil can and expect results. Pour on plenty to saturate, literally saturate, every board, cracks and all, in every hen-roost in which there is a single mite. A good spray pump is a fine thing to use outside the coop as well as inside. Then take a pail of kerosene and with

a cloth thoroughly wash under a roosts and nest boxes, places where the spray does not reach, but don't be satisfied until the oil runs down between each two battens in a stream and roof, floor, walls outside and inside are literally soaked. One drop of oil in a hidden crack may harbor hundreds.

If whitewash has been used there are usually numbers of thrifty families of mites under the scales—I hate it and never use it for I find this treatment once a year about all that is necessary, only perhaps once a month a small gallon can is used around roosts, nests, etc., but if mites show up between times the big spray pump is called into use instantly.

So much for the coops. Now for Biddy: Take a few pounds of tobacco stems (which one can get at the cigar makers), according to the number of hens kept, and steep the night before you wish to use, leaving it to soak over night. In the morning add water to take the chill off, put in a little sheep-dip and give every fowl of the place a thorough bath, working the liquid well through the feathers and, finally, dipping head and all under, then let her run in the sun to dry. She won't run much at first. She will be like dead, gasping for breath, but she soon recovers, and I have never lost one yet. Always, while in the water, examine them for feathers crusted with nits or eggs, which are usually found in the fluff around the vent. Pull these out and burn them, and if many fowls have them a second washing is advisable in about ten days. An old wash boiler is an excellent bath tub if large enough, if not a tub is all right. The main thing is to have plenty of tea and have it good and strong. This is the old Pennsylvania Dutch way of keeping fowls clean. Incidentally I might mention the fact that many Irish women give the family pig and its pen a weekly scrubbing, and if anyone can make pig into pork quicker than an Irishwoman, I rise to admire.

### PASADENA SHOW

The Pasadena Poultry Association will hold its show December 11-13. Special awards and an admission fee of ten cents will be features of the year's show.

**Coulson's**  
MADE IN PETALUMA

### The Best Egg Food on the Market

The reason for this is in the great variety of its ingredients, every one of which is bought specially for the purpose, and is not some by-product which has to be gotten rid of. The concentrated portion of the feed is selected not just for the crude protein which it contains, but for its digestibility.

The result of all this is a healthful, well-balanced feed which will give results.

Send for our free book, "CHICKENS FROM SHELL TO MARKET" and full particulars of our method of feeding.

**Coulson Co.**  
PETALUMA, CALIF.

### DRY MASH

#### The Best Feed on the Market

Has the highest protein at the lowest price \$2.80 per 90-lb. bag, subject to market changes; see that your hens eat as much Dry Mash as they do grain; feed them lightly of grain in the morning and make them work for it; either have a scratching pen or spade up a part of the ground and rake the feed under; keep "A-1" Dry Mash in a dry form before them all day; about one hour before feeding them their grain in the evening WET their Mash and let them eat all they will; put it on top of the Dry Mash, then feed them all the grain they will eat; this stuffing process will give them a full crop to carry them through the long night of inactivity; analysis is printed on every bag; give it a trial. At Your Dealers or **The Globe Mills, Los Angeles**

## Science Says Buttermilk

Bulletin 182, just issued by the Department of Agriculture, states that Buttermilk is the only preventative of White Diarrhea. It has been proven that many birds apparently in perfect health have these germs in their system and that they are transmittable to their progeny. Science has discovered that the Lactic Acid Bacilli of Buttermilk kills these poison germs. Write to Berkeley for this important bulletin, free.

The Dry Buttermilk in **GLOBE A-1 BUTTERMILK MASH** contains 10,000 live Lactic Acid Bacteria to the cubic centimeter.

Globe A-1 Buttermilk Mash is a high protein feed, free from any filler.

Globe A-1 Buttermilk Mash will prevent bowel troubles, keep your flock in glowing health, produce more eggs to market, better eggs to hatch.

Costs no more than non-buttermilk mash.

Satisfaction or Money Back.

**GLOBE MILLS, Los Angeles**

Write at once for valuable feeding information and sample, free.

## PATENT ATTORNEYS

Patents that protect are secured through The PACIFIC COAST PATENT AGENCY, INC., Savings & Loan Building, Stockton, California; send for our little booklet on "PATENTS."

## HOGS

Registered Durocs—We offer for sale a choice service boar out of a daughter of Modesto King and by a grandson of Burk's Good E Nuff; young sows and boars out of Model Queen of U. F. and by a son of Golden Wonder; young sows and boars out of a granddaughter of John Orion and sired by a son of Model Col.; three young boars out of a great sow of Crimmon Wonder breeding and sired by a son of King's Col. Every one cholera immune by the simultaneous method. Registered, crated free of charge. If you cannot visit us write for prices. Derryfield Farm, L. O. O. F. Building, Sacramento, Cal.

Chester Whites, the Billiken Brand.—Your duty is to raise more hogs and increase the meat supply. The demand for pork exceeds the production. Get started with some of these Chesters: 3 bred sows farrowed in April, 1916, due to farrow in September, and October; 18 October gilts bred to farrow in October; 3 October boars ready for service. All first class in every respect and good enough to fit and show at the different fairs this fall. All are cholera immune and will be registered free. Write for price list and booklet. C. B. Cunningham, Box C, Mills, California.

Grape-Wild Farm Berkshires — World's Fair Grand Champion Grand Leader 2nd heads our herd, not only himself a champion but the sire of champions. At the 1916 California state fair his daughters won all of the senior sow classes including the grand champion sow. At the 1916 Oregon state fair a Grand Leader sow was junior champion. We are offering a number of choice boars of exceptional breeding and are also booking orders for fall pigs. A. B. Humphrey, Escalon, San Joaquin Co., Cal.

Large Yorkshires — Choice spring boars, gilts and weaned pigs from champion sow P.P.I.E. or from breeding of champion boar and sow Sacramento, 1916. If you see them grow you will like them. Riverina Farms, Paradise Road, Modesto, Cal.

Superba, World's Grand Champion Poland-China boar and one of the greatest sires of the breed. Spring boars ready for service, also few sows bred to this noted sire, reasonably cheap. Rough's Greenfields, Arlington Sta., Riverside, Cal.

Wanted—Farmers, orchardists, livestockmen to use classified liner advertisements like this. Thousands of people read every ad and the cost is only 3 cents per word per issue, minimum 35 cents. Extra lines of white space above and below cost only 16 cents per line.

Duroc-Jerseys—Our Golden Models were supreme at Riverside last year. Watch them this year with stiffer competition. Peters, Lamson & Walker, Devore, San Bernardino County.

Bernstein Sells 20 head of choicest Poland-Chinas at the Big Sale October 19 at Hanford, Kings County. W. Bernstein.

Rancho Rubio Durocs.—Nothing to sell at present. A fine bunch of gilts and a few extra good service boars for this fall. Elmer Lamb, Ceres, Cal.

Big Type Durocs. Well grown out February and March pigs of either sex in any quantity. We ship only the tops and butcher the culls. F. M. Johnson, Napa, Cal.

Most Money in Duroc-Jerseys. Bred sows and weanlings, either sex all the time. Delta Farm and Live Stock Co., Colton, Cal.

Large Yorkshires—The ideal hog for the progressive farmer. Service boars and fall pigs, both sexes, for sale. A. L. Tubbs Co., Calistoga, Cal.

Large Type Poland Chinas are prolific and profitable. Can furnish boars any age at reasonable price. J. A. Crawshaw, Hanford, Calif.

Large Type Poland-Chinas—Very best stock. Prices reasonable. Weanlings my specialty. C. R. Hanna, Riverside, Cal.

Model Herd Berkshires bred for size and quality. Weanlings and gilts. J. L. Gish, Laws, Calif.

Carruthers' Farm Berkshire Hogs. Our herd won Premier Exhibitor prize at the P. P. I. E. Exposition, Mayfield, Cal.

Poland-Chinas — A few good breeding boars. S. F. Williams, Orland, Cal.

## POULTRY

White Leghorn Baby Chicks—We are hatching from 2 and 3 year old hens that are proven good layers. We did not sell our last year cocks but have them to breed from and are not forced to use young immature cocks. We are hatching a limited number of R. I. Reds. Lyon Hatchery, Gardena, Cal.

## DAVENPORT'S

Fully as important as the selection of your farm power is the selection of your farm implements. We make a line of double disc harrows especially for tractor power as well as horse drawn. These are of especial sturdy construction, axles 1½ in. square hard steel, large heavy spools, heavy solid top plates and angle frame with cross angles, equipped with center cutout discs with bearing springs. We make reversible discs with extension frame for horsepower, also 6 and 12 foot field harrows.

Remember, it is to your interest to buy tools from established home manufacturers on account of being near the factory and because we know the peculiar conditions of local soils. Davenport's complete line will please you and give you best service. Remember we are the largest manufacturers of these tools west of the Missouri River.

Catalogue and illustrations sent on request.

## L. M. DAVENPORT CO.

Manufacturers and Dealers in Farm Implements for California Crops

110-112 N. Los Angeles St. LOS ANGELES

## SACKS

We pay 8 cents each for all good standard size sacks—others in proportion. Bring all you have and get the money. Los Angeles Sack Co.

Chris Haag, Prop. 344 Aliso St., 3 Blocks East of P. O. Los Angeles

## SPRAY FOR VEGETABLES

Spray your beans, cucumbers, or summer squash with a solution of three pounds of arsenate of lead paste to 50 gallons. This gives better results than strong applications of Black-Leaf 40 and soap, or sulphur, wet or dry, or distillate oil.

Cabbage may be protected against aphids by spraying them with five ounces of Black-Leaf 40 and two pounds of soap to 50 gallons of water.

## Styleplus Clothes

### \$17 and \$21

Back of Styleplus success is the *Styleplus Idea*—style plus guaranteed quality at a known price.

Despite the war we have maintained Styleplus at \$17. Buying ahead and manufacturing on an increasingly larger scale enabled us to hold the price by lowering the costs.

Now the United States is at war and new conditions prevail in the fabric market. To meet them and to insure offering you an even wider range of fabrics and models than ever before, we have added a \$21 grade.

Styleplus Clothes \$17 (black label) always excel at that price. Styleplus Clothes \$21 (green label) always excel at that price.

Each grade the greatest possible value at the price. See for yourself at the Styleplus store.

*Style plus all-wool fabrics + perfect fit + expert workmanship + guaranteed wear*

### THE WORD

Oh, a word is a gem, or a stone, or a song,  
Or a flame, or a two-edged sword;  
Or a rose in bloom, or a sweet perfume  
Or a drop of gall is a word.

You may choose your word like a connoisseur,  
And polish it up with art,  
But the word that sways and stirs and stays  
Is the word that comes from the heart.

You may work on your word a thousand weeks,  
But it will not glow like one  
That all unsought leaps forth white hot,  
When the fountains of feeling run.

You may hammer away on the anvil of thought,  
And fashion your word with care,  
But unless you are stirred to the depths,  
That word,  
Shall die on the empty air.

For the word that comes from the brain alone,  
Alone to the brain will speed;  
But the word that sways and stirs and stays  
Oh, that is the word men heed.  
—Ella Wheeler Wilcox in August Nautilus.

### MAGIC RAIMENT

Concluded

Braxton tried to clear away the ache that had come into his throat as he thought of her distress over having to have a doctor. At the time he had laughed at her, and tried to console her as if she had been a child; but her tearful regret at being the cause of delaying the payments on the home seemed intensely pathetic to him now.

As Braxton closed and fastened the gate, he began talking slowly to himself.

"Yes, Brindle's set more store by the owner of this old wrapper than I have. I used to love the very garments she wore. Do I now? Why—why—certainly I do. I've just been letting the thought of getting ahead run away with me. And Frankie's been sacrificing herself right along, and—and—" he gulped, then with a sigh that was almost a groan, added, "I've been letting her do it."

He hurried into the kitchen, removed the wrapper and sunbonnet, and tenderly pressed his cheek against them. When he had strained the milk and put it into the cooler, he stepped lightly into the bedroom.

"I'm not asleep, dear," came wearily from the bed.

"Would you mind a light for a few minutes, Frankie? I want to see how you're coming on. I want to see if that pillman's stuff is doing you any good."

What he really wanted was to look at her face; to look at it with the ardor of the old days, before the struggle for worldly goods had divided him against himself.

"Why, no, of course not. I have only a slight fever now. I'll be up in a few days."

He placed the lamp so that her eyes would be in the shadow, and sat beside the bed. In one swift glance he fixed in his mind the two faces—the face before him, and the fresh, dimpled face of the days of his honeymoon.

He looked closer, and at the same time laid his hand on her cheek, ostensibly to see if the fever was disappearing. Yes, the dimple was gone; rather, it had lengthened into a little wrinkle—and he had not missed it. Her lips were straighter and tighter, and her cheeks were actually hollow. How tired and faded she looked! He knew now that it was not all the sudden illness; he knew that she had been looking tired for many months. He forgot, and stared so long that she winced.

"My complexion's awful, Braxton, I

know," she explained. "This hard water and dry air are awfully trying to the skin."

He managed to keep back the sob that was in his throat, and his big, rough hand closed tightly over the little, hot, toil-worn one that lay nearest him. Yes, even her hands were faded and thin.

"Frankie, dear little Frankie!" he whispered; then, with a start, fearing he would break down, he asked, "Is there anything you want me to do?"

"I should like a cup of tea, Braxton," she said. "Tea always helps my headache."

He lowered the light and went into the kitchen; while the tea brewed, he thought intently and resolutely. How many times had she been away that summer? Just twice—to the annual picnic of the people from their home state, and to church once. How many new dresses had she had that year? None. And she had worn the same hat ever since they had been in California. Just days and days of work and self-denial and repression; that was all there had been for her.

She drank the tea gratefully, and then went soundly to sleep. Braxton tiptoed out of the room, and went into the yard to meditate.

The peaceful, impressive stillness of a California night lay upon the valley. As he walked about in the clean, light night air, he devised a plan to atone for his forgetfulness. Finally he sat down on the big rock at the end of the porch, and listened to the deep, even breathing that came from the low bedroom window. He sat there till the moon came up, blended its silver with the snow-cap of Mount San Antonio, and then gradually flooded the valley.

Braxton went in, and after a good-night look at the sleeping face, threw off his clothes and fell heavily upon a cot.

"How's my sweetheart Frankie?" was his greeting when she awoke in the morning.

A faint color not caused by fever came slowly into her cheeks at that—an endearment that she had not heard for a long time.

"Oh, I'm lots better, Braxton. I slept nearly all night, and I don't believe I have much fever. Braxton! You're carrying on like a boy! I believe you like staying at home with me, even if I am sick and a trouble."

For reply, he caught up her hand and kissed it. She was nearly speechless with happiness. She could not remember when he had kissed her last. But she had not felt slighted or neglected; they had merely been too busy for such trivialities as kisses.

The doctor came out in the forenoon, left more medicine, gave directions, and said that he would not call again unless they sent for him.

After Braxton had straightened up" about the house, and got Frankie's repeated assurance that she could safely be left alone for a short time, he saddled up, and rode over to Mack's.

"Mack," he said, "I need a month's pay in advance. My wife's been working as hard as I have since we've been out here, and when she gets up I want to take her down to Santa Monica or Redondo Beach for a week. I think she'll be able to go in a week, and as soon as I get her there I can be back on the job."

As an all-round man like Braxton was not to be met with every day, Mack was obliging.

# The Cultivator Patterns

8497—Girls' Dress. Cut in sizes 6, 8, 10, 12 and 14 years. The dress is in one piece, with box-pleat closing.

8503—Ladies' Waist. Cut in sizes 36 to 42 inches bust measure. Shoulder edges of front extend over front in yoke effect.

7965—Ladies' Waist. Cut in sizes 36 to 44 inches bust measure. Any of the pretty striped silks can be used for this waist.

8516—Ladies' Dress. Cut in sizes 34 to 42 inches bust measure. The dress has a two-gored gathered skirt.

8507—Misses' Dress. Cut in sizes 16, 18 and 20 years. The dress has a separate basque waist and a one-piece skirt.

8483—Girls' and Misses' Princess Slip. Cut in sizes 10, 12, 14, 16 years. The slip closes at the back.

7711—Ladies' Skirt. Cut in sizes 24 to 30 inches waist measure. The skirt is cut in two panels.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH.

## HOW TO ORDER PATTERNS

Write your name and address plainly in full, give correct number and size of each pattern you want, and send ten cents in coin or (1 or 2c) stamps for each number. In order to furnish our readers with the very latest New York City styles, all pattern orders are filled in New York City. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

California Cultivator  
Los Angeles

"All right, Randall," he said. "I'm glad to accommodate you, and I hope that the wife will soon be able to go and that she'll come back strong and sound as a dollar. Come up to the house with me now, and I'll give you a check."

"Now just see how easy that was," Braxton remarked, as he rode away. "And I've always been afraid to ask him for a cent in advance."

Braxton was a generous lover the next few days, and soon Frankie was up and about. But he almost had to threaten her in order to get her away from home.

She chose Redondo Beach, because it was so green and fresh. How good the salt air smelled after months of dry heat and the thick blanket of white, powdery dust that enveloped everything! The color was actually coming back to her cheeks before Braxton started back home.

Late that night, arrayed in the old wrapper and sunbonnet, he milked Brindle, after she had given the sleeve a caress with her tongue. Night after night for three weeks he so arrayed himself at milking-time; by then he was quite sure that he loved the old garments, faded from much washing, quite as much as Brindle loved them—and that, he was glad to believe, was loving them a great deal.

Frankie came back to the ranch like the Frankie of old. She never quite understood how it had all happened, but things were different. She continued to milk Brindle nightly; Braxton considered that was only fair to the faithful creature. But there was no more dull monotony. They often went to Los Angeles, and sometimes stayed overnight; and although Frankie would worry, and frequently declared that spending so much money in just "having a good time" was scandalous extravagance, still they seemed to get on as well as before, if not better.

Braxton never told Frankie about Brindle and the wrapper and sunbonnet. He felt that it was a secret that he must keep alone. And not until one morning the following spring was Frankie aware that he valued Brindle so highly.

"Randall, what'll you take for that milker?" a neighbor rancher asked.

"Not for sale at any price," Braxton replied.

"Huh! Must think a lot of her!"

"I do," said Braxton. "That's the smartest cow in the country."

—Youth's Companion.

## CARE OF SHOES AND STOCKINGS

Written for California Cultivator  
By A. M. H.

ALL shoes are ruined if wet often, and cheap shoes suffer most of all. To keep nice shoes in shape after they have been wet you must as quickly as you take them off rub them as dry as possible, then rub with coal oil and stuff them with soft paper, set out of the sun and at a safe distance from the fire, as heat will harden the leather, and when the shoes are perfectly dry, rub with vaseline until the leather is soft and pliable. If new shoes pinch in some particular spot, lay a cloth wet with hot water over the spot until the leather stretches and gives relief. The tops of high shoes should be turned back when taken off and the shoes placed on the window sill or in some breezy place to get the sun and air.

White kid shoes may be colored black by brushing them with any of the good prepared dyes and then giving them one or two coats of shoe polish. An excellent dressing for

black shoes is easily and cheaply made as follows: Dissolve two ounces of gum shellac and one ounce of borax in a pint of hot water and allow to boil until dissolved, then strain through a cloth. Moisten one package of black slate dye for ink with a little water and stir in the liquid while hot, then add one-fourth ounce of glycerine and mix well together. A dressing for white shoes that has given entire satisfaction is made with one quart of water, two ounces of bleached shellac and a little over one-fourth pound of borax. Dissolve the borax in the water and boil the shellac in the solution until it is entirely dissolved. Strain and add pipe clay or fine prepared chalk until a creamy liquid is obtained. Made in this way the expense is less than cost in bottles.

Nice stockings should be filled with crumpled tissue paper and hung where the air can blow through them. White stockings are made whiter and clean easier by putting them to soak in warm suds with a little borax added, and it helps to keep the color in black and colored stockings, but they should be washed, rinsed and dried as quickly as possible. To keep the clasps on the supporters from tearing the tops of the stockings, either face them around the top with some soft material or sew two pieces of stout ribbon to the hems on either side and fasten the clasps to the ribbons.

## CANDIED FRUITS

By W. V. Cruess

CANDIED fruits may be made in the household very satisfactorily if a sugar hydrometer is used. This instrument will be found necessary if the process is carried out very successfully. There are two kinds of hydrometers; the Baume hydrometer and the Balling hydrometer. The Baume hydrometer may be had for 50 cents from any chemical supply house or through any local drug store. The Balling saccharometer costs about 75 cents. The Balling saccharometer reads per cent of sugar, while the Baume hydrometer reads degrees only, one degree Baume being about 1.9 per cent on the Balling saccharometer. A glass cylinder will be found to be necessary in addition to the saccharometer. The cylinder will cost about 40 cents, or an old olive bottle or a quart milk jar can be used to hold the syrup for testing. The following methods have been found successful in tests at the University of California college of agriculture:

## Candied Figs

Use figs which are firm ripe, but not soft. Prick the skins with a toothpick or a copper needle in numerous places to permit the penetration of the syrup used later in the process.

Immerse the figs in boiling water for three to five minutes. Transfer them to a crock or agateware or aluminum vessel.

Prepare a syrup which will test 25 per cent Balling or 15 degrees Baume. This will be about one part of sugar to three of water. Heat this syrup to boiling and pour it boiling hot over the figs. Allow this to stand on the figs for 24 hours.

Remove the syrup and add sugar enough to increase the syrup to 30 per cent Balling or about 18 degrees Baume. Heat to boiling and pour it back over the figs. Every 24 hours increase the sugar 5 per cent or 6 per cent Balling or 3 or 3½ degrees Baume until the syrup reaches 68 per

cent Balling or 36 degrees Baume. Allow the figs to stand in this strong syrup for three or four days. If the syrup decreases below 68 per cent Balling or 36 degrees Baume add more sugar to keep it up to this point.

When the figs have become thoroughly saturated with this heavy syrup remove them and allow the syrup to drain off through the skin. Spread the figs on a screen or cheesecloth to dry. They should be dry in four or five days. They may then be packed in cardboard boxes or in open jars. They should not be packed in closed containers because they may mold under such conditions. A certain amount of ventilation is necessary for the candied fruits.

## Other Fruits

Peaches or pears should be peeled and cut in half. Apricots are candied whole without peeling. The apricots used should not be too large. Plums, prunes or cherries may also be candied. All of these fruits require a preliminary boiling in water to make them tender, and all fruits, if they are not peeled, should be pricked with a wooden or copper needle to permit the syrup to penetrate. If this is not done the fruit may shrivel. Cherries are usually artificially colored during the candying process by adding a small amount of aniline color to the syrup. Berries, because of their soft texture, do not lend themselves well to the candying process. Oranges and other citrus fruit peels should be boiled in water until they are tender. This may require 30 minutes or longer boiling. The candying process is then carried out as described for figs, except that it is not necessary to break the skin with a needle.

## Legal Queries

Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department.

Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 115½ N. Broadway, Los Angeles.

### Hide and Brand Bill

On what date did the hide and brand bill become a law?—Subscriber, Judson.

There have been laws relative to hides and brands since 1851 which have been subject to various amendments and which were incorporated in the Political Code in 1872 and in the Penal Code as to the punitive provisions; the sections of the codes have suffered some amendments, but are still in full force and effect. In the last legislature there was passed an act to create a cattle protection board which contains other provisions as to marks, brands, and hides; this act went into effect on July 27, 1917. This is probably the act of which the question is asked.

### Miner's Rights

What must one do to protect his

mineral rights in land owned ten years?—Subscriber.

The question does not state sufficient facts to warrant an answer; if the party has actually owned the land he need do nothing further unless some one asserts some right to prospect the land and in such case it would depend upon the circumstances of the claim and also upon the character of title the owner has to his land.

### Foreclosure of Contract

If A makes contract with B to buy land, gives B payment down and note for balance, with contract to pay stated monthly installment which includes interest, the contract providing that time is of the essence of the contract and if default be made in the payments A will lose or forfeit all right to the property, including what has been paid and permanent improvements made, and if A makes default in his payments for one or two months, has he any chance of redemption? If he has how long has he and what must be the legal procedure?—Subscriber, Bonners Ferry.

In order to foreclose the contract and the equity of B in the property it is necessary for A to bring action

either to quiet title, to rescind the contract, or to enforce the agreement to pay the money evidenced thereby with the result of securing execution upon the property; several means are available to the seller of the property. The purchaser may then set up whatever defenses he may have. There are cases in which the courts have permitted the purchaser to make his payments at a time subsequent to judgment and cases in which even after deposit of the full amount remaining due the purchaser has been foreclosed of his interest. The general policy is to give the purchaser an equitable deal, however, dependent upon the circumstances of the case; there is no set statutory time or rule as in the case of mortgages.

### Grader's Contract

B, who is a responsible grader of land, writes A, who is the owner of a tract of land in a section in which the grader states he intends to grade the entire section, and proposes to grade the land of A for \$15 per acre complete, giving no plans or specifications and requesting A to send money if he wishes the work done. A replies stating he wishes work done in the same manner as that done on an adjoining tract, with which B is familiar, and sends check which is received and cashed by B. Three weeks later B writes A that after taking the opinion of experts he has found it will be worth \$20 to \$30 per acre to grade A's tract and asks for more money. Can B be compelled to do the work at the price first proposed?—Subscriber, Bonners Ferry.

B made an offer to which A gave a qualified acceptance; the acceptance of A might, dependent upon the wording of the letter, be even considered a rejection of the offer of B and an offer to have B do the work upon different terms, or, upon the other hand it might be a full acceptance and merely express a desire that the work be done in the manner proposed in his letter. If the former be the case there was no contractual relation entered into by the letter of A; if the latter be the case there was a contract. It would seem from the subsequent letter of B that no contract was made, that the minds of the parties never met in fact. The mere fact that B, under the condition of the correspondence collected and holds the check of A would hardly seem sufficient in itself to evidence an acceptance of the terms upon which A required the work done, which terms from the reply of B, which stated he had experts examine the land and it could not be graded as specified by A except at a higher price, and which reply reached A within three weeks from the date of the letter of A, was fairly prompt considering the examination. The very examination by experts and reply of B indicates that B at no time intended to do the work in the manner required by A at the price he mentioned. It is, therefore, the opinion of the writer, which would be subject to modification upon examination of the letters and facts, that no contract for grading was made by the letters; that B is simply holding the money of A as a simple bailee and must return same to A. Even if there was a contract, as it is a contract for personal services B could not be forced to do the work itself; the remedy of A would be an action for damages, the measure of which would be the difference between the amount for which B contracted to do the work and the amount which A would be required to pay for the work in the open market.

### SWINE AWARDS AT STATE FAIR

Continued from Page 335

Junior champion sow—1, Bassett on Long Model; 2, Young on Major's Lady. Champion boar—1, Hansbrough on grand champion, Major Hadley Wonder. Bassett on reserve grand champion, Model Wonder. Champion sow—Bernstein on grand champion, King's Rosebud, Bassett on reserve grand champion, Long Model.

Fat Barrows, any age—1, Beckman & Sons on one entry; 2, Beckman & Sons on one entry. Fat Barrows, pen of three, any age—Beckman & Sons on pen.

### Duroc-Jerseys

Exhibitors securing awards—J. M. DeVilbiss, Patterson; Haydn Smith, Woodland; H. P. Eakle, Woodland; W. J. Fulgham, Visalia; J. E. Thorp, Lockeford; Frederick M. Johnson, Napa; Allen Thompson, Tulare; Conejo Ranch, Newbury Park; Slocum & Son, Willows; A. A. Trueblood, Sacramento; Henry Cummins, Tulare; M. Rucker, Fair Oaks; C. L. Neilson, Fowler; V. F. Dolcini, Davis; A. J. Welch, Redwood City; E. J. Weldon, Sacramento; J. H. Minto, Patterson.

### The awards:

Boar, two years or over—1, DeVilbiss on Crimson Monarch II; 2, Smith on Uneeda Wonder; 3, Eakle on Oregon Defender; 4, Fulgham on Colonel Chief; 5, Thorp on Brookwater Fashion 2nd. Boar, senior yearling—1, Johnson on Bandholder's Thirteen; 2, Thompson on Orion's Golden Cal; 3, Conejo Ranch on Model Triumph; 4, Slocum & Son on Crimson B's 2nd; 5, Thorp on Happy Heinie. Boar, junior yearling—1, Conejo Ranch on The Councillor; 2, Trueblood on Rucker's Model G; 3, Smith on Q's Model Colonel; 4, Cummins on Tulare Defender. Boar, senior pig—1, Johnson on Johnson's Defender; 2, Conejo Ranch on Golden Model, 32nd; 3, Rucker on Kings Col. Dulex; 4, Slocum & Son on Uneeda Crimson B 3rd; 5, Thorp on Brookwater Regulator; 6, Nielson on Defender's Model. Boar, junior pig—1, Dolcini on W. B's Model 1st; 2, Johnson on Cherry Critic; 3, Dolcini on Straight Crimson; 4, Thorp on Queen's Volunteer; 5, Thorp on Searchlight of M.

Sows, two years old or over—1, Conejo Ranch on Lady Wonder; 2, Johnson on Model Defender; 3, Eakle on Belle's Good E Nuff 6th; 4, Johnson on Col's Queen Dagmar; 5, Trueblood on Col's Lady 2nd; 6, Thorp on Long Wonder's Queen. Sow, senior yearling—1, Johnson on Cherry Chief Lady; 2, Smith on H. S. Alberta 1st; 3, Smith on A. S. Alberta 2nd; 4, Welch on Crimson Bess 3rd; 5, Thompson on Merry Critic; 6th, Thompson on Angiolo's Wonder. Sows, junior yearling—1, Slocum & Son on Uneeda Bessie; 2, Conejo Ranch on Golden Bess; 3, Smith on University Queen B; 4, Johnson on Critic's Bell; 5, Conejo Ranch on Golden Mae; 6, J. H. Minto on De V's Crimson 3rd. Sow, senior pig—1, Johnson on King's Lady 3rd; 2, Thorp on C. U's Fride's Lass; 3, Smith on Uneeda Wonder; 4, Slocum & Son on Queen B; 5, Conejo Ranch on Anabelle; 6, Conejo Ranch on Jane. Sow, junior pig—1, Thorp on Volunteer's Queen; 2, Dolcini on Model Queen 1st; 3, Thorp on Delight; 4, Johnson on Miriam Critic; 5, Johnson on Peggy Critic.

Herd, over one year—1, Johnson on Bardholder's Thirteen, Model Defender, Cherry Chief Lady, Critic's Bell. 2, Conejo Ranch on The Councillor Lady Wonder, Golden Bess, Golden Mae. 3, Eakle on Uneeda Wonder, H. S. Alberta 1, H. S. Alberta 2, University Queen B; 4, Eakle on Oregon Defender, Enterprise Zella II, Belle's Good E Nuff 6th, not named. Herd, under one year—1, Johnson on Johnson's Defender, King's Lady III, Miriam Critic, Peggy Critic; 2, Thorp on Searchlight of M, Delight, Starlight of M, Twilight of M; 3, Slocum & Son on Uneeda's King Colonel 2nd, Uneeda Grand Lady, Uneeda Golden Queen 3rd, Uneeda Queen B. Herd, bred by exhibitor—1, Thorp on Searchlight of M, Delight, Starlight of M, Twilight of M; 2, Slocum & Son on Uneeda's King's Colonel 2nd, Uneeda Grand Lady, Uneeda Golden Queen 2nd, Uneeda Queen B; 3, Smith on Uneeda Wonder Model 1st, Uneeda Wonder Queen 1st, Uneeda Wonder Queen 2nd, Uneeda Wonder Queen 3rd.

Get of sire—1, get of Brookwater Fashion 2nd, Searchlight of M, Delight Starlight of M, Twilight of M; 2, Slocum & Son on get of Uneeda Wonder, Uneeda Grand Model 2nd, Uneeda Grand Model 3rd, Not named, Not named; 3, Smith on get of Uneeda Wonder, Uneeda Model 1st, Uneeda Wonder Queen 1st, Uneeda Wonder Queen 2nd, Uneeda Wonder 3rd. Produce of dam—1, Thorp on produce of Brookwater Lass 2nd, Searchlight of M, Delight, Starlight of M, Twilight of M; 2, Johnson on produce of Cherry Chief Lady, Miriam Critic, Peggy Critic, Cherry Critic, Critic; 3, Slocum & Son on produce of Grand Lady, Uneeda Grand Model 2nd, Uneeda Grand Model 3rd, Not named.

Champion boar—Champion, DeVilbiss on Crimmon Monarch II; reserve champion, Johnson on Johnson's Defender. Champion sow—Champion, Johnson on Cherry Chief Lady; reserve champion, Johnson on King's Lady III. Champion boar, bred by exhibitor—Champion, Dolcini on W. B. Model 1st. Champion sow, bred by exhibitor—Champion, Thorp on Starlight. Senior champion boar—Champion, DeVilbiss on Crimmon Monarch II; reserve champion, Conejo Ranch. The Councillor. Junior champion boar—Champion, Johnson on Johnson's Defender; reserve champion, Dolcini on V. B. Model 1st. Senior champion sow—Champion, Johnson on Cherry Chief Lady; reserve champion, Conejo Ranch on Lady Wonder. Junior champion sow—Champion, Johnson on King's Lady II; reserve champion, Thorp on Volunteer Queen.

Fat Barrows, any age—1, Slocum & Son; 2, Slocum & Son. Pen, three barrows, any age—1, Slocum & Son on one entry.

### American Special

Herd under one year bred by exhibitor—1, Slocum & Son on Uneeda King's Colonel 2nd, Uneeda Golden Queen 3rd, Uneeda Golden 4th, Uneeda Grand Lady 2, Thorp on Searchlight of M, Delight Starlight of M, Twilight of M; 3, Weldon on Mantico Orion, Mantico Queen Mantico Princess, Natomas Princess.

## Beeman Garden Tractor

PRICE \$260 F. O. B. LOS ANGELES

Complete With One-Row Cultivator Attachment

The cost of the Beeman Garden Tractor is about the same as one good horse. The expense of operating the Beeman Garden Tractor is much less than the cost of feeding one horse.

The Beeman Garden Tractor will do the work of a horse in field cultivation and many things a horse cannot do, for example—it will run the washing machine, the churn, the cream separator, the grindstone, the emery-wheel, the sickle grinder, the feed grinder, the fanning mill, the buzz saw, last, but not least, in sections where "water is golden," it will pump the water.

In cultivating rowed crops a horse in turning at the corners and ends of the row will tramp down many plants; the Beeman Garden Tractor saves them all.

The Beeman Garden Tractor cultivates any rowed crop from 12 inches up to any desired width—orchards, vineyards, etc. It is the best known implement for cultivating onions. Send for catalogue.

Barley	18.00@21.00
Alfalfa	17.00@20.00
"The Association is now asking \$23.50	
for No. 1 cow hay f. o. b. cars Los An-	
geles and Southern California points.	
The later cuttings are short and we are	
experiencing a shortage in our crops.	
Hay is selling very readily and all buy-	
ers are offering high prices. We have	
heard nothing under \$20 per ton being	
offered the growers for alfalfa. That	
price offered is of course net to the	
grower. We find that little hay is stored	
for this winter's use and that there will	
undoubtedly be a shortage before	
spring.

## Bigger Crops by Blasting

"The O'Connor prune orchard in the Santa Clara Valley was blasted in 1913," says the California Cultivator. "Its largest crop in six years was 3,900 pounds. After blasting the crop was 8,000 pounds—more than double—in a dry year. The prunes from the blasted orchard were much larger and the trees made a better growth." By using

## GIANT FARM POWDERS

STUMPING — AGRICULTURAL

in your orchard you can increase your crop, add to the water-storage capacity of the soil, and enable the roots to feed on fresh plant food in the subsoil.

Hundreds of fruit growers in all Pacific Coast States plant their trees in beds made with Giant Farm Powders. They have found that trees in blasted ground grow faster, bear earlier and yield better than those planted the old way. They use the Giant Farm Powders because these powders loosen and powder the soil instead of packing it. Ask your dealer for either of the Giant Farm Powders—Eureka Stumping Powder or Giant Stumping Powder.

### Free Book on Fruit Growing

Every fruit grower will find valuable information in the Giant book, "Better Orchard Tillage," written to suit Pacific Coast conditions. It tells and shows how to plant trees and subsoil orchards in the most effective way. This handsome illustrated book—or others—free. Mail the coupon.

5 years  
or  
25?

Farm tools and machinery left out in the open have an average life of 5 years. With proper protection they will last 25.

If *your* implements are rusting out of doors, start an implement shed at once. Use California Redwood for posts, mudsills, frame, siding and shingle (or shake) roof.

## California Redwood

*Resists rot and fire*

Redwood contains a *natural* preservative which gives it wonderful living power in contact with the ground, or when exposed to the elements. Redwood does not have to depend on artificial preservatives for its durability.

And Redwood is *fire resistant*. It gives you real protection. Redwood is light in weight, easily worked, and the seasoned lumber does not warp, swell or shrink.

Its use for *any* farm purpose is a real economy.

FREE BOOKLET: Write today for "California Redwood on the Farm." And consult your local lumber dealers. When writing, please give us their names and addresses.

California Redwood Association  
770 Call Building, San Francisco, Calif.

Ask for the child's story of the "big trees" of California—there's a copy for every child in the nation.

## Farm for Profit

### and Help U. S. Win the War

Authoritative tests have proved that as high as 50 per cent increase in crop production may be expected from the proper use of fertilizer. Do you realize what that increase means? Fertilizer is the basis of crop production, and compared to the prices of the crops they help to produce, fertilizers were never so cheap as they are today.

### MORE CROPS

will be raised in America this year than ever before. Make every acre you own or rent, produce to the limit. Fertilizer your land—the increase in yield and price of crops will more than pay all the fertilizer expense—it will enable you to farm with profit. Don't spend your time working worn out land. Make it pay—Fertilize with Hauser's Organic Fertilizer.

## Placer, County of Diverse Fruits

Incidentally Old Placer Yet Produces Some Gold—the Metal Direct from Her Gravel—More Gold From Her Soil and Climate and Water Through Her Fruits, Her Nursery Trees and Other Products. A Look-in at the Silva-Bergtholdt Nurseries. By A. Layman

**H**AVE you ever seen the scene shown on the cover of this Cultivator? Nearly every one in California has. You remember when you rounded "The Horn" up in the Sierra Nevada on

ly deciduous fruits there are all kinds of these and Placer specializes in this diversity. Mixed cars she advertises and sends to all markets of the United States, that is, to all of the smaller markets which are unable to take,

are delivered at the packing houses and made up to suit the trade of the various markets.

But where do all the trees come from that have planted all these hillsides and valleys? The answer to this question leads to one of the largest nurseries of California, which has its packing sheds and delivery yards at Newcastle. It is that of the Silva-Bergtholdt Company, which began operations in this county back in the other century. Rather, Mr. Silva—one of the pioneers of California—grew in a small way nursery trees and plants, and later his son became associated with him under the firm name of C. N. Silva & Son. Mr. Silva, Sr., retired about 1900, when Mr. Bergtholdt became half owner of the nursery and later its manager. In 1903 Mr. Silva, Jr., retired and J. F. Dudley secured his interest. The firm or incorporate name has been maintained and Mr. Bergtholdt has continued as manager of the nursery and fruit packing interests which became a feature of the business of the concern, and Mr. Dudley has been manager of the orchards, of which the firm controls a large number.

This feature of the business made

of the town. Winding down the hill from them is a narrow street more like an alley-way, along which the post office and a few other business houses have been erected.

The nurseries are located in different sections of the foothills, the larger one nearly midway between Newcastle and Lincoln over on the Valley line running up the Northern

It Came Around the Horn

The lumber from which this house was constructed came around the Horn in the early '50s. The house was erected in Placer County, where it now stands on the Silva-Bergtholdt ranch.

our first trip to California, coming over the Southern Pacific through nowsheds and tunnels and almost perpetual snows down into poppy covered slopes, hills white and fragrant with blossoming fruit trees, wealth making green fields, occasionally a scarred and upturned gulch, reminder of the argonaut—of the days of gold? Well, that's the same picture you see on our cover. That's California.

More specifically it's in Placer County, for I stood when I took that photo up on Boulder Ridge, while at my feet lay those beautiful orchards; in the far distance, at the extreme right, the town of Loomis; a bit to the left of the scene back against the hills, Penryn, and at the extreme left just behind the tree which obtrudes in the foreground, Newcastle. A bit farther, in imagination, one may see Placerville and the old mill where Marshall found his first nugget that stirred the world and made California a wonder word.

If one enters California over the Santa Fe or Salt Lake at the southern end of the state and drops into Southern California orange groves the experience in climbing from the desert over the San Bernardino range, often snow clad up at Summit—is much the same. The approach to the state from the extreme north around old Shasta again is most wonderful. A truly great state, with many gateways through its mountains and a Golden Gate swinging to the West.

But these Placer County orchards. Compared with other sections of the state Placer County is different. She believes in diversity. Most of her hillsides are covered with deciduous orchards which are irrigated with waters flowing through miners' ditches constructed in the "days of '40" and the "spring of '50."

But while the products are so large-

say, a car of Bartlett pears or of cling or freestone peaches or of cherries; for with the diverse conditions

A Block of Nursery Stock

Plums, peaches, pears and other deciduous trees in the foreground, olives farther on, and a citrus orchard in the distance.

of her hill and valley orchards she is able with plums, with table grapes, with apples, apricots, peaches, pears and other fruits to market a high quality of fruiting in quantities to fit the most exacting market.

Some of these orchards have rented for a period of many years at a flat \$50 per acre per year. Some have felt that this rental proposition has been an evil in that it has brought in many aliens whose only interest is in the coming 12 months, but there are still many beautiful homes in these orchards, and it is not uncommon to see the owner and lessee of the land still living in his own home, and possibly he and his family working in fruit season for a Japanese or Chinese contractor who has leased the place for the year or a period of years.

The fruits are usually packed in the orchard under a plan of inspection by county or association employed inspectors. These packed fruits

necessary a large packing house which has added to the length of packing house row. In this peculiar mountain town the packing houses along the sidings are really the center

The Silva-Bergtholdt Company

The larger man at reader's left is J. F. Dudley, the taller one J. E. Bergtholdt.

Sacramento Valley and to Portland. This nursery has some 320 acres, much of which is planted to varieties of deciduous nursery trees and to olives. The plan has been to raise but one crop of nursery stock. The same soil the following year has been reset to orchard trees, and some of the finest orchards of Placer County were formerly nursery plots for this company.

Henry Reinecke has direct charge of the nursery work. He is a native son, born in Placer County, entirely satisfied with it as offering him the best of the earth, and scarcely ever out of the county.

Besides the one 320-acre nursery referred to there are three others at other points. The nurseries produce around 1,000,000 deciduous trees every year, some years as low as 800,000, other years going to as high as 1,200,000.

State Highway at Newcastle

The highway at this point passes under the railway tracks on which the camera stood when the above was taken. The larger building in the foreground is that of the Silva-Bergtholdt Company. In the far distance, orchard-covered foothills of the Sierra Nevadas.

## Building Bigger Business by Better Methods

G-E Equipment is reliable and economical

When you cut down manufacturing costs—up go your profits. When you increase your productions, when you increase the quality of your products, when you decrease spoilage—up go your profits.

When you make it easier for an employee to produce more, you make it easier for him to earn more; and you find it easier to get the better kind of help and much easier to keep it. And up go your profits.

When you cut down your power costs, when you cut down main-

tenance of plant, when you reduce overhead supervision, when you lessen breakage of machinery, when you reduce stoppage of machinery—these mean *more profits*.

The principles that have helped to make America's Greatest Industries what they are today are equally applicable to farming. Drainage, irrigation, ensilage cutting, wood sawing, and dozens of other operations are performed most efficiently with G-E motors.

Ask the nearest G-E Motor Agent or your lighting company about G-E motors for your farm.

## Concerning Fertilizers

Written for California Cultivator By G. W. Waterbury

We don't need fertilizers just now but we are going to in the years ahead of us even more than in the years which have passed. First in importance comes the vegetable garden, where composted manure must occupy considerable space in the first foot of soil. The citrus trees take next rank, followed by the apple and other deciduous fruits.

Southern California, while for years past a big consumer of fertilizers, is but a small district in a large country now calling loudly for added fertility to cover the land. And the larger and thrifter the crops the more must be the replacement.

The truck gardeners in the Eastern states are carrying off every pound of manure available from the cities. In the South great quantities of commercial fertilizers are brought in besides what is produced from cotton seed. Off the South American coast the guano beds have been depleted and the latest find, the bat caves of Western Mexico, likewise now have little to offer the Mexican exporters.

The Pacific coast, which should have by natural rights the most available supplies of all sections of our country, is bound, unless governmental steps are soon taken, to need fertilizers the most of all. This is caused by our government allowing withdrawals of practically all of the fish scrap for Japanese exportation.

The heavy buying by Japan of fish scrap some time ago, marked the beginning of advanced prices of fertilizers on the Pacific coast. This and the converting of horse power into machine power in the cities, together with the utilization of commercial fertilizers manufactured in the Eastern states in those sections where produced, has caused a scarcity on the Pacific coast which is only beginning to be felt.

To be candid the situation ahead is so serious that only governmental intervention will prevent a soaring in prices that will not make the issuing of fertilizer tickets a necessity. We had not thought of rationing our trees, but it is surely coming according to the present outlook for plant food.

Let us look back to ante-bellum days for future guidance. Nitrogen then was selling at from \$3.50 to \$4.00 per unit; phosphoric acid at from 85 cents to \$1.00 and potash around \$1.00. What are the prices now at a time of the year when there is little going into the ground?

Mr. Barnes of the Fruit Growers Supply Company handles more fertilizer annually than any other man on the Pacific coast. His figures, for what he can obtain, are subject to change without notice, like steel, copper, lead, etc., and this week are as follows:

Blood, f. o. b. Los Angeles, \$7.25 per unit and with a guaranteed analysis of 13 per cent would sell at \$94.25. Sulfate of ammonia can be had delivered in small lots at \$115, nitrate of soda, ex ship at San Pedro \$84, while unpretentious bone meal, once selling at \$24 will now cost \$46.

Tankage, not as pretentious as blood, is quoted at \$6 a unit for nitrogen and \$2 for phosphoric acid, compared to \$3 and \$0.85 some time ago. Fish scrap, when it can be had, is

also quoted at \$6 and \$2. Garbanzo tankage with nitrogen quoted \$3.75 became so popular last winter that the Los Angeles manufacturer sold every ton twice. This form of tankage depends upon the amount of available refuse turned over to the cities and the recent economy practiced in the kitchen have severely diminished the output of this form of fertilizer.

Some years ago there was plenty of fertilizer, but much variation in price and in the years before guaranteed analysis was enforced by the many private fertilizing companies did a land office business quoting whatever price they deemed expedient and practicing great economy with the amount of nitrogen placed in the mixture.

One largely advertised concern some years ago did not manufacture but received bids from different fertilizer producers for a certain formula which it sold to its customers one time at \$56 per ton. The Fruit Growers Supply Company purchased this same formula at \$42 per ton from the packing house concern and sold it at a saving of \$14 per ton.

Sardy, of Chicago, was one of the first to advocate selling on a guaranteed basis in California, which with guaranteed analysis gives an accurate comparison of values for a given price. He used to say that such a system would put the dishonest seller out of business, and it did, although lately most of the large packing houses have withdrawn their products from the Pacific coast because of high freight rates from distant factories and because of increased consumption nearer home.

Another expense to the private distributors was the accumulation of bad debts, and so it became a general practice to add about \$4 to each ton sold to make up this deficit. This was probably legitimate unless a safer way could be found for making cash collections, when this expense could well be eliminated when sold to those of good credit.

In practically all of the soils in which citrus trees are grown in California nitrogen is the one needed source of plant food to be applied early and often. Potash apparently brings no results and phosphorus on partial returns for the money invested.

New foliage and sappy fruit work is what California citrus trees are ever in need of and only nitrogen and water will help in the production. Had all navel trees put out a good strong growth of new fruit wood last summer, had they been well pruned and fertilized for some years past the navel crop would now not be less than 75 per cent normal. The writer knows of some such trees being propped the first week in September where such conditions existed.

Our future fertilizers must be derived from the air, from refuse from the ocean and from our cities, or from the Chilean saltpeter beds, which will be available for some 20 or 30 years yet, and from the handling of coal when sulfate of ammonia is released.

Calcium nitrate is produced from the air by the aid of water power, which California in the higher Sierras is well supplied. In the process current of air is subjected to a powerful electric current, yielding nitro-

which is treated with lime to calcium nitrate, a very valuable combination for our citrus soils.

order to secure our own fish from the big canneries along Washington and Alaska coasts it now be necessary to refuse export of a product now badly needed here. This should be done by our government at once.

the war in Europe has caused a cessation of food production which America is called upon to fill. Intensified production always for added fertilization; it is impossible without. Then the question where will this fertilization come at reasonable rates?

the outlook is not pleasant for the Pacific coast. In the Eastern states, stated before, the packing house are now selling fertilizers in

the eastern and Mississippi valley states that formerly came to the Pacific coast. Immense numbers of dray and delivery horses formerly used in our cities have disappeared and the gasoline power truck now takes their place; the guano beds have been worked out, only the fish scrap and garbage tankage remain. The latter is not large enough to supply the increasing demand and the former, the valuable refuse from the salmon, halibut and others of the finny tribe, is now going to Japan. We have no especial grievance with Japan but here is a product needed at home, needed in order to help feed us and we are apparently willing to allow this valuable fertilizer to be carried 6000 miles from our shores to be used in building up other soils than our own.

## Citrus Canker and Its Eradication

By A. S. Hoyt, Field Deputy, State Commission of Horticulture

STATE Commissioner of Horticulture G. H. Hecke, in the desire to obtain a practical knowledge of citrus canker and the method of eradication followed in Florida detailed the matter to make an investigation of the disease in that state with a careful study of the campaign now being conducted there for the eradication of this destructive disease of citrus. This campaign is the result of the joint action of the United States department of agriculture co-operating with the state plant board of Florida. Five weeks were spent in Florida on this investigation and owing to the courteous cooperation of the Florida state plant commissioner it was possible to see the disease under many different conditions and to make a thorough study in the field of the methods of inspection and eradication. The information obtained by means of this investigation will be of great benefit to the citrus industry, enabling, as it will, the state commissioner of horticulture to strengthen the quarantine maintained against this disease throughout the state and to increase the efficiency of inspection of the groves and nurseries in order to detect at the earliest possible moment any outbreak of citrus canker should it become introduced into California.

The first case of citrus canker in Florida was discovered in a citrus nursery in September, 1912. It was next found in a nursery in another section of the state in July, 1913, and by the spring of 1914 the disease had appeared in some of the citrus groves. When first found it was a new and consequently totally unknown disease. Lacking funds to carry on the extended investigation necessary to determine the nature of the remedy for this new and malignant disease and without adequate horticultural laws and the organization to prosecute a vigorous campaign, the fruit growers of Florida organized, furnishing the funds from their own pockets, and without knowing what it was they fought or whence it came or its distribution within the state, started courageously to check citrus canker, or control it, or eradicate it, anything to save their groves. In the face of such difficulties the progress made by these first volunteer canker fighters is truly marvelous and should be written into the history of Florida, a record of which they will be proud.

By the time an adequate law had

been passed and funds appropriated citrus canker had obtained a firm foothold in Florida and many active centers of infection had become established scattered widely over the state. When the Florida plant act was approved in April, 1915, citrus canker had been found in ten counties. Working under the proper legal authority and with a vastly larger and stronger organization the work of inspecting the groves and nurseries of the state was greatly expedited so that by January, 1916, infection had been found in ten additional counties.

Citrus canker was introduced into Florida and disseminated from one locality to another within the state by means of shipments of citrus nursery stock from infected nurseries. It may, however, be carried from tree to tree or from grove to grove within the same locality by any one of the many agencies which customarily pass from tree to tree or from grove to grove. Insects, birds, chickens, implements, horses, the persons or clothing of laborers, all these and many others are possible mechanical carriers of the bacteria when coming into contact with an uninfected tree after leaving an infected one. It is possible for this disease, when thus carried to a tree which has not previously shown infection, to remain dormant for many months until the condition most favorable for its development occurs. This favorable condition may be climatic or it may be reached when the tree is making a vigorous new growth or it may be a combination of these and other factors. At any rate the fact remains that the canker organism has the faculty of remaining dormant, in which condition it cannot be discovered by any amount of inspection, and yet is ready to break out actively at any time.

When the serious nature of citrus canker came to be realized by the fruit growers of Florida great consternation prevailed. The prices of citrus groves declined and a feeling of despondency invaded the citrus industry. With the remarkable results obtained by the eradication campaign however confidence was gradually restored. Citrus canker is not yet eradicated from all the groves of Florida but the progress made has been so marked as to justify this feeling of confidence. From May 1, 1914 to August 31, 1917, a total of 456 individual properties was found infected. Of that number 333 have been subsequently pronounced no longer danger centers. In the months of May, June,

I Save You \$15 to \$200

The Pomona canneries closed their peach packing season October 1, having handled a record breaking crop.

July and August, 1914, 1856 infected grove trees were found as against 196 for the corresponding period in 1917. The experience which Florida has had with citrus canker has been severe and costly, but as a direct re-

sult of that experience have come good horticultural legislation, a splendid central organization for their enforcement, an efficient quarantine service and a fine system of nursery inspection.

## The Walnut Crop

N ITS circular Number 2 of the 1917 season under date of September 21, the Walnut growers' Association says:

It is more difficult this season to make an accurate prediction of the walnut tonnage than ever before, as many unusual conditions have recently developed. The walnuts, which had almost completed their growth for size when the heat damage was encountered in June, seem to have made no further development in size since that time and as a consequence the average run will not be as large as last season and owing to the fact that the association is using a grader for the soft shells with openings slightly over an inch, the percentage of No. 2s will be heavier this year than since 1912. It is estimated that the crop will out-turn around 20 per cent No. 2s, as against four per cent last year.

There are appearing in the first pickings a great many nuts with very thin shells which will be used for cracking purposes. This is also a result of the June hot weather and will also reduce the tonnage of first grades. Discounting the above and several other unusual conditions it is predicted that California will out-turn 27,000,000 pounds of first class walnuts, about eight per cent less than last year's crop. These figures, however, are more subject to revision than they have been in previous years when the estimates were more easily made.

Practically all of the nuts that were seriously damaged by the June hot spell have prematurely dropped, and barring the possibility of severe early rains the cracking quality will be fully equal to, if not better, than last year. First pickings show a larger than usual percentage of light colored and well filled meats, and present indications are that the average deliveries will crack well above 90 per cent good.

The crop is maturing just about two weeks later than last year. Most packing houses will open during the first half of October. However, it looks as if the crop will mature quite evenly and we expect to be able to deliver practically everything in time for distribution for the Thanksgiving trade unless labor conditions become more serious or freight movement becomes unusually slow.

### Increased Cost of Production

A very careful investigation has developed that the cost of producing walnuts had increased this year three cents a pound over last year's figures. This is due principally to the doubling in the cost of common labor and of hay and grain necessary for feeding work stock, increased cost of water for irrigation, and in fact, of every item entering in the producing of the crop.

### Foreign Conditions

Our latest advices from salaried agents in both France and Italy indicate that the Italian crop is about 1500 tons short of normal. However, the Italian nuts are coming off fairly early and some arrivals may be expected to reach America in time for distribu-

tion for the Thanksgiving trade in the farthest Eastern states. Prices for the best grades of Italian new crop walnuts are ruling about 17½ cents, New York.

The French crop is reported to be considerably later than normal. Cable received under date of September 21 from our agent at Grenoble advises a "calamity" has just happened which has damaged the growing crops a minimum of 40 per cent. This probably refers to either very hot weather, cyclones or heavy rains. Cable reports blackened and diseased nuts falling everywhere, labor very scarce and arrivals improbable for the holiday trade.

The sizes of French walnuts are reported to be under normal but up to the date of receiving the above mentioned cable the cracking qualities of

all varieties of French nuts was reported fully up to the average.

There will apparently be some difficulty in securing transportation of tide water on all varieties of French nuts, the French government only allowing commercial shipments to move on certain days. Also little steamer space, with the exception of the very small boats, is now available as belligerent governments have taken over most of the larger vessels for military uses. Nuts coming in the smaller and older boats may be subject to considerable quality damage in transit. Also most of these boats make a slow passage so that very scanty arrivals of French nuts may be anticipated before the turn of the year. We estimate that there are not over 2000 tons of old crop foreign walnuts in jobbers' or importers' hands at the present time, that over 1500 tons of new crop foreign nuts can arrive prior to January. Adding these figures to the California production we have 34,000,000 pounds of unshelled walnuts available for consumption up to January 1, against a normal consumption of the same period of 48,000,000 pounds. It therefore seems apparent that the market will be short of walnuts during the holiday period.

## Nursery Registration

The 1917 legislature added an amendment to the state horticultural law making it compulsory for all nurserymen to register with the State Commissioner of Horticulture and pay a fee of \$1.00 annually. This is in line with the general standardization movement being carried on throughout all lines by the agricultural and horticultural commissions. The object is to keep the commission in closer touch with the nursery trade, as it is already charged with the inspection of all nursery shipments, both intra-state and inter-state. The law as finally passed reads as follows:

"Any nurseryman, agent, jobber, person, firm or organization operating in the state of California, who

ships, sells or handles nursery stock, trees, plants, shrubs or vines which are for planting or propagation purposes within the borders of this state shall register with the state commissioner of horticulture and shall pay the same one dollar for such registration for a period of one year. The state commissioner of horticulture shall issue to each applicant a special license number, and all shipments of such licensee shall have his license number affixed to the package of nursery stock, trees, plants, shrubs or vines for planting or propagation purposes; provided, however, that any agent or agents acting as salesmen for a nurseryman, jobber, person, firm or organization shall not be granted a license number but shall be required to use the license number signed by the nurseryman, jobber, person, firm or organization by which such agent or agents are employed.

## South San Joaquin Community Fair

Written for California Cultivator

By G. D. Murphy

THE third annual community fair of the South San Joaquin irrigation district is being held in Escalon this year, Friday and Saturday, September 28-29, the other two fairs having been held in Manteca and Ripon in 1915 and 1916.

The holding of what is known as community fairs is a new thing in California, although it is understood that in various eastern states these fairs have been conducted for a good many years. It is believed that the first fair of this kind to be held in this state was the one in Manteca in 1915.

The idea of holding these fairs was originated by Mrs. D. O. Castle, who was then the president of the South San Joaquin Federation of Parent-Teachers Clubs, and they were to embrace all the school districts in the South San Joaquin irrigation district which had been completed only the year previous to this date. Her idea was to make them purely educational in nature, and to a large extent this idea has been carried out. The object was primarily to stimulate an interest in the schools along the line of agriculture, domestic science, home economics, etc., which would result in bringing the people in closer touch

with each other and cultivating a community spirit that would work to the advantage of the whole district.

The success of the first fair held at Manteca was very gratifying in the attendance and size of the fair reached much greater proportions than had been planned for. The fair held at Ripon the following year was even more successful. By this time these fairs had become known practically all over California and numbered among the visitors were prominent people from all sections of the state.

Escalon, where the fair is being held this year, is a thriving little city in the midst of a rich and prosperous agricultural section. It is situated on the Santa Fe and Tidewater railroad 22 miles southeast of Stockton.

### THE "NIGGER IN THE WOODPILE"

The United States government has found it necessary to issue from Washington the following:

There is no truth in a widely circulated statement that the government expects to take food supplies from any family. Both the food administration and the department of agriculture join in a statement to counteract what seems to be a deliberate propaganda to the effect that the government

ment intends to take from every nly all canned goods put up in ex- ss of 100 quarts.

This is only one of the variations to a rumor which has been widely cir- culated. Another statement is that a government has been urging the nning, drying, and preserving of its and vegetables so that they ll be in a convenient form for the vernment to handle and transport en it takes them away from the ople. Further elaboration is that ese goods are to be taken away om the American homes and ship- d to England.

In one instance a motorist stopped a farmhouse to fill the radiator of a automobile. In the course of con- sation he casually inquired wheth- the farmer's family was canning the surplus fruits and vegetables order to help conserve the food pply. He was ipformed that the rmer was not doing this because the vernment intended to take all the nned goods away except a small rt of it actually needed by the mily itself.

The authorities state emphatically at no such course has ever been ntemplated by the government. On e contrary, both the department of riculture and the food administra- on are strongly urging housewives can and preserve, especially at this ne, all surplus fruits and vegetables order that the households them- lves may have a cheap and plenti- l supply of food.

## Liberty Subsoil Plow

ILLUSTRATIONS here with expresses more than any words we can say but just a bit to give a little pep to the story: This is the great- est plow ever made. It is a subsoiler which requires three of the largest

is built for subsoiling in certain sec- tions of the San Joaquin and Sacra- mento Valleys and has been forced through sandstone hardpan several inches thick, breaking it up to a dis- tance of six feet either way from the plow. There are three of the plows,

#### LIBERTY SUBSOIL PLOW

Close up view show- ing working parts of the plow out of the ground. These parts are on a level but as it is dropped into the ground the rear ones go much deeper. The steel point had been removed when this photo was taken.

tractors in use to handle. It is pos- sible that where conditions are not too strenuous two "75s" and one "60" might handle it but ordinarily it is a task worthy of the three largest. It is constructed of highest grade steel,

the first cutting to a depth of 16 in- ches, the next to a depth of 32 in- ches, and the last one, or the first which appears in the illustration tak- en from the rear, cuts to a depth of 48 inches. The wheels are eight feet

The World's Biggest  
View of the plow with man standing to give comparative size.

the axle is four-inch solid steel, the standards holding the steel points are 1 1/4 by 14 inches, also of highest grade steel. The wheels are eight feet in diameter. It is supplied with an auto- matic lift which pulls the three great plows out of the hardest hardpan. It

in diameter and the length over all nearly 24 feet. As we said, it is the largest in the world and it was made in California. The Killefer Manufac- turing Company has just shipped it from its Los Angeles shops to the Liberty Farms Corporation in the San Joaquin Valley.

## Nurserymen's Annual

ALIFORNIA Association of Nurserymen will meet in convention at San José Oc- tober 10-13. As Santa Clara County considers itself the cradle of the nursery industry in Cali- fornia and at present the center of the largest seed growing business West of the Mississippi, exceptionally large attendance should be given at this seventh annual of the associa- tion which had its birth in that valley. Mrs. John Vallance and Max J. Crow are at the head of the reception committee and Almon Wheeler is handling the local finances of the con- vention.

An exhibit is being prepared by lo- cal exhibitors of whose committee E. H. Elmer is chairman. The opening session is Wednesday evening when President Leonard Coates will call the convention to order. City Manager Reed will give an address of welcome

to which Prof. Wickson will respond, and Secretary Brooks of the San Jose chamber of commerce will deliver an address on "Cooperation." Music will be furnished by San Jose talent.

Thursday morning's session will be given up to appointment of commit- tees, payment of dues and reports of standing committees.

#### Thursday Afternoon

Prof. Wickson will deliver an ad- dress on California Nurserymen of the II and III Decades. He will be follow- ed by Prof. Elmore Chase, From the Nursery Row to the Orchard Row; Robert K. Vickery, Some Ideas on Fumigation of Nursery Stock; Max J. Crow, How to Make Labor Con- tent; Charles E. Jackson, Shall the C. A. of N. meet at Same Time and Place as the Annual Fruit Growers' Convention?

## Clearing Country Roads for Action

WAR has suddenly forced the farm to take rank with the packing house, the munitions plant, the steel mill and other industries, as a factor of supreme importance in the service of this country.

No manufacturer in these modern days, when time counts for so much, would think of establishing a factory out in the country without first determining the length of the haul and then reducing hauling time and cost of hauling power to the lowest point possible by removing the obstacles of bad roads. Supplies from the farm to millions of consumers at home and to our troops abroad must first travel over the country road.

*Clearing the roads for action doesn't mean some other road; it means YOUR road, if your community is going to do its bit not only in war but in preparing for the greater activities of peace which are to come.*

### CONCRETE ROADS Their Advantages

No Mud—No Dust  
No Ruts—No Holes  
No Skidding  
Easy Hauling  
Smooth Riding  
Long Life—Safety  
Always ready for use  
Low Maintenance  
Moderate Cost

By building hard and durable smooth concrete roads, time wasted in dust, ruts and mudholes may be used on the farm for crop production.

Be sure you know what a concrete road is. Concrete is made of portland cement, sand and pebbles or crushed stone. It is hard and durable, rigid and unyielding. Concrete is used in dams, factories, bridges, and big engineering works like the Panama Canal, requiring great solidity and strength.

## CONCRETE FOR PERMANENCE

# APOLLO ROOFING

— FULL WEIGHT —

Fireproof—Strong—Durable.

Gives unexcelled protection to your farm buildings.

APOLLO-KEYSTONE COPPER STEEL GALVANIZED SHEETS are unequalled for Culverts, Tanks, Silos, Flumes, Cisterns, Roofing, Siding, and all forms of exposed sheet metal work. These sheets are highest in quality and should be used wherever a highly rust-resisting and durable material is required. Accept no substitute. Look for the stencil with the added Keystone—it indicates that Copper Steel is used, and insures service and satisfaction. Sold by weight by leading dealers. Our "Better Buildings" booklet is sent free upon request.

AMERICAN SHEET AND TIN PLATE COMPANY, Frick Bldg., Pittsburgh, Pa.

## Ornamental Planting Calendar for October in Northern California

Written for California Cultivator By A. R. Gould

ALTHOUGH our working hours in the garden will be much shorter we have to make the best of every second as there is much to do in order to have a fine floral display each year, and we must arrange for a long season commencing with the spring display which is quite as important as the summer and fall displays as many beautiful subjects are at our service including the Alpine flowers, primulas, arabis, aubretia, etc., bulbs of every description, wallflowers, violas, stocks and pansies. There is surely no lack of variety and many charming schemes of color can be worked out by the artistic gardener which will bring admiration from friends and joy to the owner.

### Bulbs

Owing to war conditions and the fact that most of our bulbs are imported from Europe, it was an open question as to whether we should secure many to plant this year from our local bulb dealers, but recent reports from Eastern and California dealers are to the effect that the bulb ship is on its way, if not already in port, with the first load, and other shipments are expected daily, so that we are assured of a good supply, and we can therefore consider the best varieties to plant.

Freesias are grown largely in our own state and thrive here admirably. The Eastern market is largely supplied from this source. They make beautiful cut flowers, are very fragrant and flower here early. The variety known as Purity is the best improved type. Plant these one and a half inches deep in fairly rich soil and two inches apart in large groups or in rows if required for garden borders. They may be planted in pots now and grown for house decoration. Place five bulbs in a five inch plot and water well, keep in a dark place for a few weeks until the bulbs have started into growth, later place them in the window to continue active growth. They will require a few small stakes to support them as they show the flower buds.

French Roman hyacinths are very fragrant and make useful pot plants or a fine show in the garden. Plant these three inches apart and two inches deep in the garden. Four bulbs can be grown in a flower pot five inches in diameter. Use same method of culture as advised for freesias.

Snowdrops, those pretty dwarf white flowers which are the earliest to open, should find a place in every garden and where one has some corner where they could be planted, say among ferns, and left to become naturalized, nothing adds more charm to a garden. They may be treated in much the same way as freesias. There are both single and double types.

Scilla campanulata, the bluebell, is another charming subject for the wild garden or fern corner and will readily become naturalized. Plant these as advised for Roman hyacinths.

Crocus provide us with an early show and may be secured in white, yellow, purple and blue. Give these a trial and plant as advised for freesias.

Anemones are among the best spring flowers we have and should be planted three inches apart in beds or borders without delay.

Narcissus, which also includes the well known daffodils, should soon be planted in fairly rich soil about three inches deep and six to eight inches apart. Golden Spur, Emperor, Glory

of Leyden and Victoria are some of the very best daffodils. Among poets narcissus plant Poeticus, Burbidgei. If you also require grace in your garden in spring plant Jonquil campenelle and Jonquil rugulosus, the large flowering type. Of the large flowering hyacinths plant Gertrude, Albertine, Grand Mar, Lady Derby, Rio des Belges and low Hammer. Plant these as advised for narcissus and they will require liberal treatment in the way of manure.

The early tulips should be planted as soon as possible. Always endeavor to plant these in solid beds one variety to a bed if a bright color scheme is desired. Plant two inches deep, rich soil four inches apart. They may also be grown in five or six inch pots, placing four to five bulbs in the pot and the same cultural directions adopted as advised for freesias.

Forget-me-nots, arabis alpina, aubretia and double daisies all make good subjects to plant as a carpet for bulb beds. These should be planted out this month and will then provide a good spring display.

While named varieties are invaluable the best to buy many reliable bulb dealers furnish mixtures which will provide a wide range of color and generally prove quite satisfactory.

### Winter Flowering Subjects

Wallflowers and stocks should be planted out at once if bloom is required this winter.

### Seed Collecting and Sowing

The seeds of many more perennials will now be ready to collect and should be sown without delay. Collect seeds of hollyhock, geum, glove (digitalis), delphinium, gaillardia. Among the annuals tagetes, marigold, larkspur, ranunculus, asters, zinnias, sunflowers and stock of which seed can be collected and sown in early spring.

### Lawns

Last month we dealt briefly with methods of preparation for lawn making and it is more than important that the foundation of a lawn be given careful consideration. Soil conditions must be right and weed roots should have been eradicated entirely. After the surface has been well graded and thoroughly prepared the next point to consider is the best grass mixture. Straight grass seed to sow. Generally speaking the particular location of the plot with the nature of the soil conditions will govern one in the selection of the seed. If the soil is sandy Australian or Pacific rye is the correct grass to sow. For a mixture made up of a good loam a mixture of Kentucky blue grass, Pacific rye, white clover will make an excellent lawn for an open situation. Kentucky blue grass has been largely used alone for lawns, and there are now very good lawns existing today in the Bay district and in the large country homes on the peninsula, but as trouble comes in the winter when frosts hit this grass severely and the wet season as a good lawn should turn brown and is an eyesore, it takes many months to really recover. There are other excellent grasses, among the fescues we may yet find all round grass which is hardy and will supersede the Kentucky blue. We are now experimenting with this and later may have some interesting reports to make. For shady plots reliable seedmen put up a mixture of selected grasses which have proved to answer the purpose. If your lawn is to get hard wear sow the Golden Gate Park mixture.

Now as to the best time to sow seed it will be a good plan to wait until the first rains, but if possible wet the plot down beforehand, this will allow the weed seeds to germinate in about three weeks. The lawn should then be weeded and you will have less trouble from weeds coming up in the new lawn.

## IRISES

August to November is the time to plant for results next flowering season.  
The DEAN IRIS GARDENS, Moneta, Cal.

As to mulching, during the rains it is not altogether necessary to cover seed with a heavy dressing of manure. Furthermore, if farmyard manure is used it is generally full of

weed seed. If any mulch is used use clean straw, and when dressing old established lawns, if you would avoid weeds use an artificial manure. It will take about one pound of seed to sow 200 square feet of lawn.

## October in the Vegetable Garden Southern California

Written for California Cultivator By D. F. Reichard

**T**HIS is generally a hard month in the garden in Southern California. The long dry summer has seemed to have taken all the moisture out of the soil, and when water is applied it seems to dry out without doing much good to the plants. When irrigating in the garden at this time wet as large an area as possible—the moisture will not be fused as much as where small areas are irrigated. If it is inconvenient to rake or plow up the wet ground at once rake or cultivate over the whole surface, making a mulch to hold the moisture for a few days until the soaking up of the patch can be properly attended to. Be sure to keep the stuff growing in your fall and winter garden in good growth by frequent irrigations and cultivations. One glorious thing about fall gardening is that weeds are not very active. During this month plant Crosby's Egyptian beet; Half Long carrots; Cowball or Purple Top turnips, radishes, Giant Amsterdam or Prickly Perch spinach, salsify and New York or Wonderful lettuce for early spring use. If the weather continues mild for some time some of these vegetables will be ready for winter use. Plant all of these in rows so they can be conveniently irrigated and cultivated. Cabbage and cauliflower seed could be sown now for winter plantings. Set out young plants started during August now for early harvest.

## Northern California

Written for California Cultivator By A. R. Gould

**T**HIS is really a very busy month in the vegetable garden as we must have our plots prepared for the coming season's early crops. Deep trenching and manuring will be necessary throughout the garden and every detail in the way of soil preparation must be studied if you wish for the best results.

If your soil has become worn out it will require a good dressing with farmyard manure or a good artificial fertilizer. Bonemeal or sulphate of ammonia are both excellent. The former is rather slow acting but is always safe, and the latter contains considerable nitrogen in a soluble form and becomes available for plant growth shortly after its application to the soil. This manure is invaluable especially where there is a scarcity of farmyard manure. Lime may be applied in the form known as slacked lime and is essential to all acid or sour soils.

It will be found very helpful as a fertilizer. It is sometimes applied in the form of quicklime to clayey soils and those containing humus. It quickly acts on vegetable matter. Lime applied to adobe soils would be of value and should be applied at the rate of one hundredweight to the acre. Lime is not used as much as it might be in California. Wood ashes and soot if well buried in the soil are also to be recommended. Wood ashes contain from five to 15 per cent of potash and produce excellent effect on all green crops. All refuse should be burnt—on the ground where possible—and the residue put back where it belongs.

### Tomatoes

Most of the fruits which have started to turn, and in fact well developed green ones, should be picked and put away in some dry place to ripen. In this way many fine fruits will be saved from rotting on the ground and a slight frost may mean the end of this crop. It will be advisable to select the best fruits of those true to type for seed for sowing next year.

### Cucumbers

Most of the fruits of these will also

Sow seed of Early Queen onion or put in onion sets for any variety for early onions. It is advisable to sow the seed of onions in beds and transplant them to the prepared spot when they are one-eighth to one-quarter of an inch in diameter. It is too early to plant seed of globe varieties.

In favored locations early varieties of Peas—Laxtonian is the best—will mature by Christmas. The semi-dwarf and tall varieties of peas will grow but would not set pods until in the spring unless we have a very mild winter, therefore they are not recommended at this time.

Although some authorities recommend sowing egg plant, peppers and tomatoes at this time, I consider the latter part of November quite early enough except for hot house culture.

The planting of any squashes or melons at this time is out of the question; the nights are too long and cold. If one is on a side hill that is frostless Canadian Wonder or Ventura Wonder Bush beans might mature. On other locations do not venture. Corn is even more tender than beans.

On ground that is not to be used until early spring it is well to be arranging for a supply of manure to cover it for turning under after the first good soaking rainstorm.

Harvest the sweet potatoes before frost comes. The tops are fine cow feed. Clean up all old rubbish and vines and burn them—an excellent method for mimmidizing pests.

be ready to collect and they may be used for pickling.

### Carrots

Make a sowing of Danvers Half Long and French Forcing for winter use.

### Lettuce

Make a sowing of California Cream Butter at once and a hardy winter variety known as Hardy Hammersmith.

### Radish

Winter varieties of this crop should now be sown. The best are Chinese White Winter and Chinese Rose Winter and Long Black Spanish. Sow in deep rich soil and thin these to six inches apart.

### Onions

See that the seed bed is well prepared for this important crop as toward the end of November the general crop may be sown providing the rains are not too heavy and the location very wet. Certain early varieties such as California Early Red, Extra Early Pearl, Red Bermuda and White Bermuda may be sown now. See that the seed beds are made level with a fine surface soil and left fairly firm.

### Peas

For the sowing of this crop much will depend upon the early rains, however it will be important to have the land ready and where possible a well sheltered location should be chosen. It should be noted that the earliest peas bring the most money in the market and generally escape attacks from aphids or green fly. The varieties usually grown for the early crops are Alaska, Little Marvel, Premium Gem, Dwarf Types and First and Best, earliest of the tall varieties.

### Herbs

These are often called for and useful as flavoring agents, hence it would be advisable to sow seeds in a warm border of the following: Sage, thyme and sweet marjoram. Root divisions may often be secured of mint which is very popular.

# Fruit Trees

Fresno is a great fruit growing center, and it is, therefore, only natural that it should be the headquarters in California for choice nursery stock.

Soil, water and climatic conditions are ideal here for growing young trees.

## Every Horticulturist in the State

should have a copy of our new Fruit Tree Catalogue, which will be off the press some time in November, and which will contain very full and complete information about all varieties of fruit-bearing trees. Be sure and send for a copy.

## OUR ADVERTISERS RELIABLE

We guarantee our subscribers against  
loss through dishonesty of any adver-  
tiser in the Cultivator. We do not at-  
tempt, however, to adjust trifling differ-  
ences between subscribers and honest,  
responsible advertisers, nor will we pay  
the debts of honest bankrupts. Notice  
of complaint must be sent us within 30  
days from date of the transaction, and  
the subscriber must have mentioned the  
Cultivator when writing the advertiser.

## THIS WEEK'S COVER

The cover illustration and the  
wonderfully rich country it shows  
speak for themselves, and in addition  
the article on the third page of this  
issue speaks for them, so we need say  
no more.

## GEORGE H. WATERS

George H. Waters, for years at  
the head of one of California's most  
successful fruit canning and drying  
concerns at Pomona, has passed. He  
died last week at his Pomona home.Mr. Waters became interested in  
California fruit business nearly 30  
years ago and was actively identified  
with it until a short time before his  
death.

## SUBSTITUTES

We all have little patience  
with the merchant who is always able  
to supply "just as good as" the arti-  
cle for which we inquire. Few have  
the hardihood these days to attempt  
to substitute, but in the matter of  
feeds for live stock present day prices  
impel substitution, at least in some  
cases. This is the time of the year  
when a bit of work with pencil and  
paper and the studying of conditions  
on our own ranches may give a pointer  
as to what may be grown through the  
winter months or during the spring  
time which will take the place of the  
high priced concentrates. Many  
an orchardist has been able to keep  
up his running expenses this year by  
the returns from intercrops.

## SECOND LIBERTY LOAN

It seems to be definite that the  
second liberty bond issue will bearfour per cent interest. The first lib-  
erty bonds have not yet been distribut-  
ed. The pledge of the treasury depart-  
ment that the certificates for the first  
liberty bonds may be exchanged for  
others should they bear higher rate of  
interest will be honored. It has been  
rumored, however, that there will be  
a charge for converting these bonds.  
This the secretary of the treasury  
says is erroneous. There has been a  
ruling in effect that the interchange  
of bonds of different denominations  
and of registered and coupon bonds  
will require a small fee. However, it  
is urged that for the present sub-  
scribers retain their full paid interim  
certificates which entitle the holders  
to all rights of bond holders as to  
principal, interest, conversion and in  
every respect.

## NEXT YEAR'S FAIRS

There has never been such inter-  
est in conventions, fairs and dem-  
onstrations as shown this year. The  
attendance at the state fair was a  
record breaker. Annual meetings and  
conventions held in Sacramento at  
the time of the fair showed most in-  
tense interest. The demonstration by  
the Implement and Tractor Dealers'  
Association of Southern California  
was many fold greater and more suc-  
cessful than that of last year.Now comes an official of a fair as-  
sociation to the Cultivator office and  
asks suggestions as to next year's  
fair. It must be bigger and better  
than ever. Already are plans being  
made, for the signs of the times point  
toward greater need another year  
than this year. Hence greater pro-  
duction will be demanded. We be-  
lieve that these early plans will re-  
sult in much better fairs, surpassing  
this year's as this year's have their  
predecessors.

## NURSERY NEEDS

California beats the world in  
fruit production. No section has  
such variety, such quality; no sec-  
tion has the climate that will permit  
such perfect curing of fruit in the  
sunshine; no state has such advanc-  
ed legislation to encourage and pro-  
tect this great industry. But as ad-  
vanced as is this legislation, it, like  
all other laws, sometimes works in-  
justice. How its weak spots may be  
strengthened and how the injustices  
may be wiped out have called forth  
many a discussion at conventions of  
fruit growers and of nurserymen. This  
is the season when both of these in-  
terests meet in convention and we  
doubt not it will give occasion for  
congratulation that the last session of  
the legislature made such changes in  
the laws that less objection can be  
made to them than in any preceding  
year.Next week the California Associa-  
tion of Nurserymen will meet at San  
Jose. This convention will, we be-  
lieve, devote less time to legislation  
than has any former convention, at  
least a look over the program shows  
little having to do with that topic.  
State Horticultural Commissioner  
Hecke touches upon State Laws of  
Today, and this may give opportunity  
for more discussion.This organization of nurserymen,  
by the way, is one of the strongest  
and one of the most important to the  
future of the fruit industry. The ex-  
ecutive committee, composed of  
Messrs. Meriwether, Wilson and Gill,  
is making appeal for greatly increas-  
ed membership.Join up boys and make it unani-  
mous.

## GOLD BRICKS AND THINGS

At the meeting called by the  
Los Angeles council of defense for  
the purpose of launching a movement  
for organizing a farm bureau the  
question of eligibility to membership  
was raised by one who is a success-  
ful farmer. He made the point that  
only those engaged in raising field  
crops or livestock should be admitted.  
The city farmer owning land and  
farming through a superintendent,  
and the orchardist he considered not  
eligible. We grant that in some co-  
operative organizations effort has  
sometimes been made to secure too  
general a membership, and this has  
finally resulted in the commission  
men, or at least interested members,  
securing control, and instead of be-  
ing managed cooperatively it has  
merged into an organization directed  
by selfish interests. This has caused  
farmers to look with suspicion on  
those who may wish to associate with  
them purely as a matter of public in-  
terest and for the general welfare.  
But as one speaker at the Los Angeles  
meeting said; "As to the fruit grower  
being a farmer there is nothing to  
discuss." The farm adviser or the  
farm bureau movement is purely for  
the benefit of the producers whether  
they grow annual crops or orchard  
trees which require years to bring to  
maturity.Again, while the cultivator may not  
be necessary to the success of all  
crops, it is a vital necessity with  
many; also it may be true that the  
California Cultivator is not necessary  
to the success of the farmers of Cali-  
fornia, but it is so vitally interested  
in agriculture and its prosperity de-  
pends so absolutely upon the prosper-  
ity of the farmers of California that  
it feels it is one of the farming class.  
May it not well be associated with  
those whose interests are one with  
its interests?At any rate the California Cultivator  
is now a member of a live and  
working farm center and we expect  
it to be a factor in the upbuilding of  
the present movement for greater and  
better production in California.

## COMMUNITY SPECIALIZING

The Cultivator has often refer-  
red to the wisdom of a community  
centering upon the product for which  
it is best adapted and for which the  
greater part of its producers have a  
preference. As an example, let us  
refer to Kings County, this state. Its  
live wire producers have largely cen-  
tered upon the Poland-China hog as  
fitted to their conditions, and to the  
upbuilding of this breed almost the  
entire live stock interests of the  
county have bent their best energies.  
Now when one wants to buy a Poland-  
China he thinks at once of Kings  
County, and so the reputation of the  
county is becoming greater and its  
ability to supply the best of the  
breed is also becoming greater—  
which increases its reputation, and so  
on. On this point we have a letter  
from R. K. Walker, secretary of the  
Southern California Duroc-Jersey As-  
sociation. He writes more particular-  
ly of the coming Riverside fair, mak-  
ing appeal for the complete coopera-  
tion of all livestock breeders. He  
says:"In our own breed there had never  
been any animals shown at the River-  
side fair up to 1916, although there  
were probably more red hogs in the  
southern part of the state than any  
other breed. The Southern California  
Duroc-Jersey Association was organ-ized before the 1916 Riverside fa-  
and as a result we had more Duroc  
at that show than were shown by any  
other breed. During this year almost  
every member of the association has  
bought from one to a carload of  
registered Durocs from the East, and  
this year we expect to put on the  
best show ever. We believe that if  
all the breeders in this section con-  
centrating on one breed we can get  
better results and make some real de-  
velopment, where if we are all raising  
different breeds we are more or less  
working against each other. Every  
breeder is benefited by bringing in  
an extra fine animal of his breed to  
any other breeder in his community.  
Cooperation is certainly not confined  
to the fruit business as our results  
show."

## Agricultural News Notes

Dairymen in Northeastern Ohio are  
reported to be throwing away milk be-  
cause of a disagreement with buyers  
regarding prices.The campaign for the second Lib-  
erty Loan began October 1 and will  
last for four weeks. The new issue  
amounts to \$3,000,000,000.At the coming citrus seminar at the  
University of Florida, October 9-11  
there will be discussion of protection  
of orchards from frost by various  
heating systems.Construction work at Camp Lewis,  
Washington, is being rushed in re-  
sponse to a change of plans calling  
for the stationing of a large number  
of extra troops there.The bean crop of Michigan is re-  
ported to have suffered a 20 to 25 per  
cent damage from the recent cold  
weather. The potato crop also suff-  
ered but not to so serious an extent.The United States department of  
agriculture will try the experiment of  
transplanting the large leaved Pa-  
help to the Atlantic Ocean in the  
hope of raising a supply of potatoes  
nearer the Eastern fields.From Texas comes announcement  
that delicious table syrup is being  
made from mesquite beans. The sug-  
gar of the beans is said to be easily  
and economically converted into molasses  
by boiling the juice.The South this year will harvest  
peanuts from more than 2,000,000  
acres, an estimated crop of 70,000,000  
bushels, and the oil mills which in  
1915 made practically no peanut oil  
are now having hard work to supply  
the demand.Florida's campaign to eradicate the  
sweet potato root weevil is being ad-  
vised by the United States department  
of agriculture which has set aside  
\$10,000 for preliminary survey of in-  
fested territory and demonstration  
control methods.The potato crop of New Brunswick  
has been seriously affected by blight  
in the field. It is stated that 60 per  
cent of the growing plants have been  
killed by this blight. Owing to the  
large increase in acreage, however,  
there will be practically the same out-  
put as last year.Artillery horses on the firing line in  
France suffer from "nerves." It has  
been found necessary to send large  
numbers of the horses back of the  
lines to recuperate. There is no trou-  
ble with mules. The Kansas City  
Star says, "The humble American  
mule has inscribed his name on the  
scarlet pages of Verdun and the Somme  
and British tanks and French  
'75s' salute him."

he Union farm bureau center of a County, at its recent annual eting, elected Ham Johnson direc- George Peters vice director and a Holmes secretary.

fter closing up accounts for a r's work the Orland Cow Testing ociation found it was able to make refund of ten cents per cow on all rs that went through the year's ting.

ruit growers of the Suisun and aville Valleys have filed with the rd of supervisors a petition ask- for the appointment of a horti- tural commissioner for Solano nty.

Experimental plantings of cotton Esparto in Yolo County have been successful that it is probable ger plantings will be made next and some growers hope that cot- may be used as an alternate with

The Napa County Livestock Asso- tion has donated \$100 to be award- in special premiums at the Napa nty fair to be held at Napa Sep- ber 22-26. These prizes are in ad- on to those offered by the manage- nt.

President Stephens of the Pacific e Growers' Association predicts a e crop for the coming season th between \$8,000,000 and \$10,- 0,000. He says that 62 per cent of e growers of the state are in the as- ciation.

A visitor to the rice camps north- et of Davis, Yolo County, says the rvesters are finding much difficul- in securing horses and are forced bring them in from sections as far ay as Los Angeles. It is also hard secure enough labor.

The prune crop in the district about eridian, Sutter County, has been cut wn seriously by the work of the d spider. Many trees have been en- ly shorn of their leaves and pre- nt a very odd appearance with noth- g but fruit on the branches.

At the California land show to be ld in San Francisco in October one y is to be egg day. The Petaluma mber of Commerce will be in arge and promises "to distribute a rload of one-day-old eggs free to ery visitor at the exposition."

Butte County's women's committee the council of defense has begun a mpaign to register every woman d girl over 16 in the county to de- termine their fitness for work which ey may be called upon to do in re- lacing the services of men. Over 150 fferent lines of work will be listed.

## Central California

Friday, September 28, was Clovis day at the Fresno district fair.

The bean harvest of the Porterville section of Tulare County is estimated at something over 10,000 bags.

Merced reports the peach cutting season about over, with prices around seven and seven and a half cents a pound.

Oakdale, Stanislaus County, is ship- ping out a big almond crop. This sec- tion has a full 100 per cent crop this season.

The San Joaquin Valley exposition train is now touring Missouri and arousing great interest in all towns where it stops.

Apple growers of the Watsonville section are having much difficulty in securing cars. All sorts are being used, from cattle to meat cars.

Merced County will hold its first annual farm picnic on October 6 at Courthouse Park. Dr. Elwood Mead, head of the land colonization move- ment, will be present and address the members.

The farmers at Selma, Fresno County, are asking that some meas- ures be adopted which will do away with the long hours of waiting at the packing houses before delivery can be made of fruit.

The Dinuba Sentinel reports that practically the entire raisin crop has been picked and that the labor situa- tion has been much less serious than was anticipated. Drying weather never was better.

Orders have been issued to quarter- masters in charge of all supply de- pots of the United States army au- thorizing substitution of Thompson seedless raisins on all requisitions where currants are specified.

Horticultural Commissioner Collins of Tulare County reports very satis- factory results from the poisoning campaign of squirrel week. The cam- paign is still going on in the expecta- tion of making a thorough job of it.

At the annual meeting of the Tulare County Citrus Fruit Exchange last week at Porterville the following of- ficers were elected: H. C. Carr, presi- dent, Hobart Webster, vice-president and W. E. Sprott, secretary-treasurer.

Horticultural Commissioner Ruth- erford of Stanislaus County, in his an- nual report states that Stanislaus' al- falfa crop this year amounted to 472,- 000 tons; 44,000 tons of cantaloupes were harvested and 25,000 tons of watermelons.

Eighty-five per cent of the 1917 rais- in crop is now on the trays. The la- bor situation, which at the beginning of the season seemed so serious, has been settled satisfactorily by the as- sociation, less than one per cent of the growers, it is stated, paying as high as four cents per tray where the early demands were for from five to ten cents.

The San Joaquin Valley Milk Pro- ducers' Association has been organiz- ed with the following officers: Presi- dent, F. W. Hansen; vice-presidents, Al McNeil and E. J. B. Burgess; sec- retary, J. A. Schlotthauer, treasurer, H. E. Vogel. The temporary head- quarters are in the chamber of com- merce building at Fresno. The or- ganization will cooperate with the As- sociated Dairymen of California.

## Southern California

The Coachella Valley is making preparations for her fair and date fes- tival to be held November 1-3.

Onion growers of the Coachella Val- ley held a meeting at Coachella last week to organize a valley onion mar- keting association.

Farmers generally are making plea for extension of the school vacation season in order that pupils may aid in the harvest of various crops.

The Riverside Chamber of Com- merce at a recent meeting adopted resolutions asking for state aid in the construction of the Coachella Valley highway.

Ranchers on lowlands of Orange County who have heretofore raised sugar beets are considering turning their land to the raising of lima beans, grain and corn.

At the annual meeting of the West Ontario Citrus Association it was re- ported that growers received this year \$142,759.94, an increase of \$38,- 807.48 over last year.

A plot to blow up Sharp's Heading, in Lower California, one of the main structures in Imperial Valley's irri- gation system, was frustrated by the arrest of three suspects.

The death of 200 sheep on the Mal-ibu Ranch, at first attributed to poi- son, upon investigation by the deputy state veterinarian and county live stock inspector proved to be caused by anthrax.

Representatives from Imperial County have received promise from Governor Stephens that he will trans- mit to Washington their protest against the drafting of men needed in harvesting the crops.

The Imperial County farm bureau, to aid men who have been called to war, has organized a selling bureau for the purpose of handling without cost to these men, animals or imple- ments which they have to dispose of.

The Dougine Land Reclamation Company, organized for the purpose of manufacturing hydro-electric pow- er plants for the reclamation of mesa lands of California and Arizona, will establish a \$150,000 factory at Redon- do Beach.

The San Bernardino County farm bureau will make an attractive ex- hibit at the Riverside County Fair, at which a first cash prize of \$150 will be offered for the community or dis- trict having best exhibit of agricul- tural products.

The improvement association of Lucerne Valley, San Bernardino County, held its annual celebration and exhibit of products at the school house last week. Lunch was served at noon and dinner in the evening, followed by an interesting program.

The Riverside County farm bureau will hold a silo raising at which a specialist from the university will be present and show method of construc- tion and superintend its erection. This is the same type of silo constructed at Sacramento during the state fair.

The acreage of beans near Palm- dale and in other sections of the An- telope Valley, which last year con- sisted of two acres, was this year raised to 2000. Ninety per cent of the crop has already been sold. Many Teparies were raised in this section.

## The Coast

Douglas County, Washington, will have a \$7,000,000 wheat crop.

At the recent interstate fair at Spo- kane receipts show 76,000 admissions.

Northwestern wheat growers have received a basic price of \$2.05 in bulk at Coast points.

There was an especially good exhibi- tion of poultry at the state fair at North Yakima, Washington.

The Wenatchee Growers' Associa- tion, Washington, has just made a sale of 25,000 boxes of apples.

Navajo County, Arizona, will ship 25 carloads of beans. Last year the county had only three carloads.

Many breed associations are laying plans for live stock sales at Lewiston during the Northwest Live Stock Show.

The big movement of Colorado po- tatoes started the last week in Sep- tember. About 400 carloads are going out weekly.

At the recent Washington state fair 800 sheep were sold and the profits from two amounting to \$925 were turned over to the Red Cross.

A fruit drying plant with a capacity of 20 tons a day has been installed at the state prison at Walla Walla, Wash., where cull fruit of the valley will be handled.

Most of the peach crop from the Wenatchee section of Washington is being shipped to Montana and Can- ada. That district will send out about 147 carloads this season.

An effort is being made to consoli- date the Land Products Show and Growers' Food Show this year at Portland. The dates for the Land Products Show are November 3-24.

The state agricultural college at Pullman, Washington, opened on Oc- tober 1. This is much later than usual, owing to the desire to keep the stu- dents in the harvest field as late as possible.

The Washington Farmer reports that "there will be 25,000 more stock on the ranges of the Oregon-Washing- ton grazing district next year than this."

Milk producers of the Frazier Val- ley of Oregon have formed an associ- ation controlling 90 per cent of the milk produced in the valley. There are 800 farmers in its membership. The producers receive 27 cents per gallon.

Announcement has been made that the International Live Stock Show to be held at Portland this winter will have no display of stock other than fat cattle, all breeding animals being excluded for lack of housing facilities. The stock men are protesting.

Wheat growers of Washington Oregon and northern Idaho, assem- bled at Portland September 7, decided unanimously to carry their fight for a north Pacific coast terminal as a base in the establishment of a 1917 wheat price direct to President Wil- son.

Mrs. Edith C. Salisbury, who has been in charge of the home economics work of the university extension, has taken up work with the food commis- sion in Washington and will be suc- ceeded in the Arizona work by Mrs. Lockwood, who has been in charge of similar work at the Kansas agricul- tural college.

**GUARANTY—**

An agreement by which one undertakes to make sure and certain the existence, continuance, or the like, of something.—Webster.

In applying the strict letter, as well as the spirit, of Webster's definition of GUARANTY to registered Holstein cattle, the Holstein breeders have advanced to a point in this sale beyond any point of progress previously established.

Eighty head of individual attractions will be offered, both females and males, selected from among the top animals in high class herds by a Committee of three. In its selections the Committee will cause some very substantial sacrifices to be made by breeders in the carrying out of its instructions to produce eighty head of cattle in

this sale every single one of which will meet with the approval of the buyer who wants breeding animals of the highest desirability in every respect.

Beyond and after the actual sale will extend the most liberal health guaranty yet put into selling practice.

Committee of Selection: Frank L. Morris, Woodland, Cal.; James W. McAlister, Chino, Cal.; C. L. Hughes, Sacramento, Cal.

The management desires to avoid as far as possible any disappointments to those who wish catalogs, and owing to the unusual demand will appreciate early filing of requests.

Hanford, Kings County, Cal.

**The Kings County Fair**

Written for California Cultivator

HE wisdom of setting the proper dates for our various county fairs in California will be realized by the associations if they experience a few more years like 1917. With some of the associations taking certain dates without regard for other fairs, all are bound to suffer more or less. We do not know who was at fault this year, but the Kings County fair falling at it did on same dates as Stanislaus did neither any good. Possibly it hurt Hanford more because she would have secured her usual amount of live stock exhibits at least and possibly more. Hanford will always have a first class swine show because she is in the heart of a great hog producing district, but if the dates could be arranged properly by Modesto, Fresno, Hanford and Bakersfield each show would have a splendid live stock exhibit. The cattle barns at Hanford this year were noticeably bare because a lot of the showmen stopped over in Modesto following Sacramento, and many of them plan to go to Fresno the following week.

However the attendance at Hanford this year far surpassed that of last year, the weather was fine, and considering the fact that this is one of the county fairs which receive no support from state appropriations but is financed by the business men and breeders of the community the show was a creditable one.

**The Cattle**

Holsteins and Jerseys were out in force, but no beef cattle were entered. A. B. Comfort won senior and grand champion Holstein bull on Julianna De Kol King Segis. He also won junior champion bull and was well up in the money in the other classes. The Clarks were much in evidence in the Holstein section. Fred Ross captured junior and grand champion female on Rossmead Westport Cornucopia, a granddaughter of Fidessa Bloom, the former state record cow for seven day butter production. He showed a nice string of cattle and had them in fine shape.

**The Jerseys**

Three herds of Jerseys competed for the prize money and divided it evenly. C. I. Starr, a young breeder,

won senior champion bull on Financial King Of L. and, first aged herd R. L. Waltz won first on two year old cow, while Church and Hubbs won grand champion bull and cow. For the first time in years N. H. Locke was not present at the Hanford fair in fact the entire circuit missed him this fall, but conditions on the Locke ranch were such that it was impossible for him to take out a show herd.

**The Swine**

Poland-Chinas of course, claimed the lion's share of the prize money offered, and why shouldn't they? Kings County has been a leader in Poland-Chinas for many years and the annual show at Hanford is a wonder.

Wm. Bernstein, fresh from his conquest at the state fair, got the coveted purple ribbons on both boar and sow at Hanford. Kings Rosebuds and Rosebuds Chief, two outstanding individuals, turned the trick for Mr. Bernstein. The Bassett herd won a long string of blue ribbons and was quite up to its usual high standard. It is almost impossible to beat Mr. Bassett's great young boar Surprise in his class. Old Chief Victor, victor many times in the California show ring was not entered.

The big feature in the Duroc-Jersey division was the winning of the grand champion boar by Henry Cummings who showed this year for the first time. His boar is a Defender bred animal and was a contender for first money at Sacramento. R. C. Sturgeon brought out a Critic B young sow which won grand champion easily. If this young matron had been taken to the state fair she would have been a sensation as she is of championship caliber.

Charles Kimble brought out a few Rambouillets just to fill in although he had no competition.

Most of the Hanford exhibitors hurried home after the fair and did not ship to Fresno because they were urgently needed on the farm. We trust that by next year the war will be over and that the California association of district and county fairs will get together and agree on a schedule which will run the shows from Sacramento to Los Angeles without any conflicting dates or back hauls. Until they do this some of them are going to be the losers so far as live stock exhibits are concerned.

**Report of the San Joaquin County Cow Testing Association**

The following produced 45 pounds or more of butter fat during the last testing period of 30 days. We give name of owner, name or number of cow, breed, pounds milk, test, pounds butterfat.

Oak Grove Dairy, Blucher, G. H. 1639, 4.2, 68.9. J. DeCarli, 237, G. H. 1416, 3.9, 57.5. Gottshall & Magruder, Hengervelt, H. 1545, 3.7, 57.2. F. M. Thorp, Peiterji Nellie, G. H. 1170, 4.8, 56.2. County Farm, 125, G. H. 1329, 4.0, 53.2. Bruml & Thorp, Miss B., J. 995, 5.2, 51.4. Oak Grove Dairy, Lady, G. H. 1818, 3.8, 50.0. County Farm, 72, G. H. 1512, 3.3, 49.9. N. H. Locke Co., 205, J., 654, 7.5, 49.0. Bruml & Thorp, Lady M., J., 1159, 4.2, 48.7. Mrs. E. C. Clowes, 53, G. H. 1352, 3.4, 48.6. Mrs. E. C. Clowes, 35, G. H. 1316, 3.6, 47.3. O. Fowler, Jane, G. H. 819, 5.7, 46.7. Mrs. E. C. Clowes, 63,

G. H. 899, 5.2, 46.7. Mrs. E. C. Clowes, 91, G. H. 1006, 4.6, 46.4. N. H. Locke Co., 133, J., 741, 6.2, 45.9. F. J. Kell, 728, H., 1380, 3.3, 45.5. N. H. Locke Co., 108, J., 1102, 4.1, 45.3. Mrs. E. C. Clowes, 1520, G. H. 1333, 3.4, 45.0.

The following herds show the highest average milk production per cow during the 30 days. We give name of owner, number of cows, total average pounds milk.

F. J. Kell, 30, 792. County Farm, 37, 783. F. M. Thorp, 9, 758. R. W. Fisher, 18, 684. J. V. Brown, 7, 671.

The following herds produced the largest average amount of butter fat during the 30 days. We give name of owner, number of cows, test, pounds butterfat:

F. M. Thorp, 9, 4.1, 31.5. F. J. Kell, 30, 3.1, 28.4. County Farm, 37, 3.0, 27.6. Bruml & Thorp, 16, 4.7, 27.0. N. H. Locke Co., 73, 5.3, 23.7.

## Field Notes from the Live Stock Men

Karl Gotschall and A. R. Magruder, young Holstein breeders of San Joaquin County, spent two days at the Modesto fair while the judging was going on. Business affairs and labor shortage on the ranch prevented them exhibiting this year.

Wm. Bond, Alameda County Shorthorn breeder, was seen around the beef cattle barns during the entire week of the state fair. Mr. Bond has a fine herd of cattle which he has been breeding for almost a generation, but has not yet been convinced of the advantage of exhibiting.

Chas. Kimble, Kings County banker and sheep breeder, is running 6,500 Rambouillet ewes in the Tulare Lake district. Like all of our other California breeders he has been sold out of surplus breeding stock for months. Mr. Kimble sells sheep all over the United States and the quality of his fine wool sheep is of the best.

Professor O. E. Reed of the Kansas agricultural college, judged the dairy classes at Modesto and gave universal satisfaction. Mr. Reed had to catch a late train Wednesday of fair week in order to arrive at the Missouri state fair in time to judge dairy cattle.

Mrs. H. V. Bridgford has been an enthusiastic Holstein exhibitor all the way down the circuit from Sacramento. Mr. Bridgford of course, is the real exhibitor, but Mrs. Bridgford is a constant ringside visitor. She is very fond of Holsteins and an exceptionally good judge.

L. D. Smith, Alameda County Guernsey breeder, showed his string at both Sacramento and Modesto. This was Mr. Smith's first year at the fairs and he says it will not be his last. He supplies a select trade with a guaranteed brand of Guernsey milk and is building up a fine herd of registered stock.

George Kounias, Modesto business man and breeder of Holstein Friesian cattle for a comparatively short time, finally achieved his ambition to own a grand champion when his entry at Modesto, King Korndyke Hengerveld Ormsby, was presented with the purple ribbon. Mr. Kounias has another young bull on his place which is bred along the highest producing lines in the herd book. His name is Toyon King Korndyke Soldene, a six months old son of Finderne Soldene Fayne, (33.28 lbs. butter in seven days). His dam's sire, King Hengerveld, 29 A. R. O. daughters, including a 37 pound three year old, and who also made a world's 365 day butter record of 1395.06 pounds at three years old. Finderne Holingen Fayne is a half brother to Segis Fayne Johanna, world's seven day butter champion, 50.68 pounds. On his sire's side his grandsire is a full brother to Mabel Segis Korndyke, the first 40 pound heifer of the breed, and present world's champion junior four year old for 30 days.

A. J. Welch, Guernsey breeder of San Mateo County, left for New York after the close of the state fair where he will look after his business affairs but will no doubt find time to visit some of the famous Guernsey herds in that vicinity. The Hidden Valley Guernsey herd were consistent winners at Sacramento and their owner is one of the leading spirits in Guernsey affairs in California. He has only been identified with the breed here for a short time.

Shorthorn breeders are looking forward eagerly to the proposed combination sale to be held during the coming land show in San Francisco. The advantage of holding select sales of guaranteed stock has been a long time coming to the beef interests of California but is welcome now that it has arrived. Many of the breeders will be making a sacrifice of females they ought to retain just to get the sale business started.

Messrs Pickering and Painter, chairman and manager of the live stock department of the Land Show spent several days at the state fair lining up exhibitors. Mr. Pickering is a live wire who could go out and get any number of exhibits had he the space available this year to accommodate them.

George Watterson, Inyo County Hereford breeder, was an interested visitor at the state fair. He and Governor Packard of Arizona talked White Face cattle for hours at a time. Mr. Watterson has a line bred Repeater bull at the head of his fine herd of 100 or more females.

Ronald Hill, manager of the Tehachapi Cattle Company, took in the Sacramento show, accompanied by his wife. Mr. Hill is an expert cow man who has been doing big things in the production of "baby beef" down in Kern County. He uses nothing but the best bulls obtainable for range duty and he likes Herefords best of all the beef breeds.

D. O. Brant, of the Elliott Brant Company, Los Angeles County, attended the annual banquet of the Guernsey Cattle Club of which he has been secretary ever since its organization. Mr. Brant but recently returned from a two months trip East where he purchased 70 head of purebred Guernseys to add to his herd.

E. A. Noyes and Son, Sutter County Hereford breeders, motored down to Sacramento to see the cattle show. The Noyes' are just getting into the pure bred Hereford business, but have made a splendid start with a few choice head. They will in all probability exhibit next year.

Selling off 75 head of finished hogs to the packers, which realized more than \$3000, M. Bassett, the Hanford Poland-China breeder, made the statement the other day that after he had figured the cost of producing these hogs he found that they made him more profit than any variety of his fancy fruits, and fruit prices are not low this year either. The cheapest gain was put on these hogs by the use of barley stubble and alfalfa pasture. They were heavily grained the last 40 days of the feeding period, ranged in age from seven months to ten months, and averaged more than 235 pounds each when they went to market.

Owen Duffy of the Napa State Farm has just sold two yearling heifers at \$600 each, and two four months old calves at \$350 each. All of these were among the Napa State Farm exhibits at Sacramento during the state fair.

### HUSH!

It was in a churchyard. The morning sun shone brightly and the dew was still on the grass. "Ah, this is the kind of weather that makes things spring up," remarked a passerby casually to an old gentleman seated on a bench. "Hush!" replied the old gentleman, "I have three wives buried here."

**\$1.00 A LB. BUTTER**  
will pay for a new  
**DE LAVAL**  
**CREAM SEPARATOR**  
Every Three Months

**C**OMPETENT AUTHORITIES predict that butter will go to \$1.00 a pound before the winter is over.

Even at present butter prices no cream producer can afford to be without a separator or to continue the use of an inferior or half-worn-out machine another week.

It is not only our solemn duty to eliminate every waste of food products, time and labor, but the individual dollars-and-cents interest of every cow owner is too great to delay so important a consideration.

A De Laval Separator bought now will more than save its cost by spring. It can be bought for cash, or if preferred, on such liberal terms that it will easily pay for itself in its actual savings over any other separator or creaming system.

Why not see the nearest De Laval agent at once! See a new 1917 De Laval machine for yourself. Try it to prove every claim for it. If you don't know a De Laval agent write direct to one of the addresses below.

## State Dairy Cow Competition

Prof. F. W. Woll Writes of the Performance of the Herds Which Are Members of Cow Testing Associations and Which are Competing for the California Cultivator Prizes Aggregating \$300 in Cash.

**T**HE state dairy cow competition which is being conducted by the college of agriculture of the University of California has brought forward many remarkable records of both pure bred and grade cows, which have not been exceeded in any similar competition in this country or abroad. At the time of the closing of entries, May 1, this year, 410 cows owned by 45 breeders and dairymen had been entered in competition for prizes to be awarded for monthly or 10-months records; in addition eleven herds with an aggregate number of 384 cows were entered in competition for the prizes offered by the California Cultivator for the highest average production of butterfat for one year by herds belonging to a cow testing association.

The names of the owners of the herds competing for these prizes and the average number of cows entered in each follow: A. Ambort, Holtville, 30 cows; Floyd Beebe, Woodland, 14; Coppini & Coppini, Ferndale, 60; J. W. Coppini, Ferndale, 22; Curtis Darnell, Brawley, 10; Leonard Hess, Tudor, 22; John Hanson, Loleta, 30; Iver Iversen, Arcata, 37; F. J. Kell, Stockton, 18; Walter Terkelson, Ferndale, 55; G. E. Trigg, Ferndale, 36. Total, 384.

The three prizes of \$100 each, offered by the Cultivator, will be awarded for herds from (a) 10 to 25 cows, (b) 26 to 50 cows, and (c) over 50 cows, all heifers and cows in milk

during six months or more being included in the average for the herd. Association records for twelve consecutive months during the period from November 1, 1916 to February 28, 1918, will be considered in the award of these prizes. Owners, therefore, have the privilege of selecting the record period for their herds within the dates given, and since they cannot tell until the close of the period, during which twelve months their herd had the highest average production of butterfat, the exact figures will not be known until that time. We have, however, secured the data for the production of the competing herds during the past six months and give these in the following table. The figures include the records of production for all cows in milk during the respective months. If it should turn out later on that some of the cows were not in milk for at least six months during the record period, they will be excluded from the average; the figures given are therefore, subject to revision. It is very likely, however that they will stand without material changes.

The average monthly production of these herds is very creditable indeed, and especially in the case of the Humboldt County herds is exceptionally high, showing the effect of the nine years of cow testing association work in that section. Both the data presented in the table and the records for individual grade cows and groups of such cows as published in the

Average Production of Butterfat Per Cow Per Month, in Pounds

W. Terkelson	45	47.58	48	53.78	52	50.37	53	49.77	53	47.36
G. E. Trigg	34	55.00	33	64.57	33	56.34	34	59.23	35	44.48

monthly summaries of the competition are, in fact, the most striking illustration of the value of cow testing associations to a dairy community. Very few pure bred herds, and perhaps none, containing as many cows as in these herds, can make a better showing. A production of over 90 pounds of butterfat for the month by a grade cow and over 75 pounds as the average for five grades, are records that any dairyman may well be proud of, and whole herds have averaged better than 50 pounds for the month, as shown by the table.

Such results can only be reached by taking advantage of systematic

testing of cows for milk production and by gradually improving the production of the herd through the use of good pure bred dairy bulls, by disposing of low producing cows and heifers, and by feeding and handling the cows kept in such a manner as to obtain a maximum production from them.

The Cultivator deserves great credit for encouraging cow testing association work in this state through the award of the prizes mentioned; no more important work can be done for the advancement of California dairying than to aid in increasing these associations in scope and usefulness to our dairy farmers.

Major Hadley Wonder 242397

This Poland-China is said to be Model Major's greatest son who won the senior and grand championship at Sacramento State Fair. Bred by H. I. Marsh and owned by J. H. Hansbrough.

## Protecting Fur-Bearing Animals

**T**HE fur-bearing animals of the Pacific Coast are estimated to bring a return of \$1,000,000 each year, according to report of the state fish and game commission. This is interest at 5 per cent on \$20,000,000. It is decidedly worth while to protect this invested capital and to increase it if possible. It is on this account that at the last session of the California legislature a law was passed protecting California's share of this vast amount during the time of the year that the furs are of no value and establishing other restrictions that will aid in conserving the fur industry.

The law defines the fur-bearing animals as brown and black bear, ring-tailed cat, coon, pine marten, fisher, wolverine, mink, river otter, gray, cross, silver and red foxes and establishes an open season during the months of November, December, Jan-

uary and February. During this time it is lawful to take them only by means of guns and traps, but when destroying property they may be killed at any time. Trapping for profit can only be carried on under authority of a trapping license. The cost is \$1 for citizens and \$2 for aliens. There is no charge for a license for those under the age of 18. All trappers over the age of 18 must make an annual report of the number of furs taken. Through this report very reliable data will be obtained that will be of assistance in properly taking care of our fur industry. One of the most pleasing provisions of the new act is the protection which is given the black and brown bear. There has been an urgent demand in all the mountain sections of the state where bear are still found for protection for this valuable animal, but up to this time it has been impossible to do so.

## Tuberculous Skim Milk and Buttermilk

While there are no available statistics upon the subject we believe the amount of loss to California livestock men because of the feeding of raw skim milk and buttermilk from creameries, if it were known would be appalling. From Prof. Gordon H. True we have information that at a San Francisco packing house the percentage of condemnation of hogs for

tuberculosis in a recent killing ran as high as seven per cent in one entire week. Another week the percentage ran well up towards nine per cent. Prof True advises:

"This high percentage of tuberculosis in hogs would seem to be due to the feeding of raw skim milk from tuberculous cows. At a time like this when pork products are so high and milk products so valuable it seems

## ABORTION IN CATTLE

**PREVENTED AND CURED PERMANENTLY**  
**YOUR COWS MADE PROMPT. REGULAR BREEDERS BY**  
**STERILOID**

**STOP LOSING CALVES**

**TREATMENT:** If STERILOID is used at the first sign of abortion the cow will go her full time and if your cows or heifers do not come in season, or fail to get with calf, use STERILOID. Cows get with calf after only one treatment. Write today for FREE BOOK. It explains the causes and symptoms of Abortion and tells how to cure Abortion, and make your cows regular healthy breeders with STERILOID. Also contains letters from breeders who have used STERILOID.

**GUARANTEE:** We will refund money in every case when STERILOID FAILS to make good.  
Price \$1.00. Mail postpaid, in plain wrapper.  
**MARTIN REMEDY CO.** Dept. L, 395-405 Columbus Ave., New York City.  
Reference, Colonial Bank

be utmost folly for dairymen to take the chance of feeding raw skim milk from questionable herds to their hogs. "I would suggest the propriety of our urging through the columns of our paper that a special effort be made to secure the practice of pasteurizing or boiling milk that is fed to hogs. The freedom of California hogs from tuberculosis would automatically raise the price of hogs for all sellers."

We know there are ranches where his loss is a serious factor. Clean up.

#### SOME STORY

The yellow press is the cause of no little trouble and much injury to many a community. The Cultivator referred in its issue of September 22 "3000 sheep dying because of poison." This poison was put out in the squirrel campaign which was general all over the state and an "enterprising" reporter, flinging the truth to the winds, stated "3000 sheep were killed from eating poisoned grain." We reprinted the item supposing it truthful. The Terra Bella News of August 24 refers to investigation by an agent of the department of agriculture and adds: "Arriving here he found that only 16 sheep had died out of the 3000 driven in and he was much relieved."

#### SKIMMING RICH CREAM SAVES FEED

In skimming 100 pounds of 35 per cent cream, 15 more pounds of skim milk is kept on the farm than when the same amount of 20 per cent cream is taken. This saving can be accomplished by a turn of the cream screw, and at present feed prices is well worth the effort required. More skim milk on the farms also means more calves raised to furnish meat and milk for all. Milk producers are paid for the butterfat in cream; not for the water and other constituents. This makes it advisable to skim a rich cream, so that as much valuable skim milk as possible may be saved for feeding purposes.

#### WAR SILOS

Prof G. H. True, at the Swine Breeders' banquet at Sacramento, said: "What is best in peace is best in war"—referring to the production and consumption of meat as against grain farming without livestock, and the eating of grains instead of meat.

The same is true of silos. They are a war necessity for the production of additional meat and milk, and hundreds of farmers who are building and filling silos this fall are unconscious patriots.

In the Sacramento Valley these silos will be filled with a wide variety of feed, including all of the non-saccharine sorghums and Indian corn. The acreage of feterita and milo is comparatively large. Every kind of corn is proving satisfactory as a silage crop.

#### DIRTY CREAM CANS WASTE FOOD

Dirty cream cans are food wasters. Butterfat that sticks to their sides doesn't help to feed the allied armies or the women and children at home. Besides the fat actually lost in dirty cans, there is a greater loss through the manufacture of the inferior product that is the result of poor cream. Save fat by cleansing the cream can carefully. It pays, and our soldiers and Allies need the fat.

#### SALE OF JERSEYS

Chris Myhre manager of the Orland Cheese and Butter Company of Orland, Glenn County, announces the auction sale on October 8, of his entire herd of pure bred Jersey cattle. The auction sale will be conducted by Leachman and Linbarger.

#### THE LIGHT RUNNING ACME

An Acme will cut anything that will make silage and elevate it to the highest silo. That is not all. When not in use as a silo filler you can use it anytime to cut dry feed. Cutting up dry feed is helping to reduce feed costs from 10 per cent to 20 per cent on hundreds of

farms in California. If you want to make alfalfa meal the Acme Feed Cutter can be equipped for this purpose. An excellent grade of meal can be produced at a cost of about half of that for baling.

#### THE ACME IS THE ONLY ALL-STEEL FRAME CYLINDER CUTTER MANUFACTURED

This frame is securely riveted throughout. There are no bolts to jar loose. The frame can't warp nor the bearings get out of alignment as is the case with the old style wooden frame cutters. Vibration and wear are reduced to the minimum in the Light Running Acme.

The Blower is Center Hung between the side members of the frame giving strength and rigidity to the entire construction.

The Triple Frame construction allows three bearings for the main shafts eliminating vibration from that source.

You don't have to buy a truck for an Acme Cutter. They all come mounted on a steel wheel truck complete with pole.

## 103 Registered Holstein Females

A 28 pound cow and her three daughters.  
A full sister to a 31 pound four year old.  
Eighteen granddaughters of King of the Pontiacs.  
A granddaughter of Rag Apple Korndyke 8th.  
A granddaughter of Tilly Alcartra.  
Four helpers sired by a 29 pound grandson of King Segls.  
Twelve A. R. O. cows with records up to over 28 pounds.  
A granddaughter of Hengerveld De Kol.  
A granddaughter of Sarcastic Lad.  
A splendidly bred granddaughter of King Segls Pontiac.  
Splendid cows and helpers bred to King Pontiac Netherland Segls.  
Richly bred cows and helpers bred to a son of Colantha Sir Aaggie out of a 28 pound daughter of Colantha Johanna Lad.  
Altogether as choice a lot of females as ever went into a sale in California.

## 22 Registered Holstein Bulls

King Pontiac Netherland Segls, a proven son of King of the Pontiacs and out of a good record daughter of King Segls Pontiac. Here is a real herd header, one of the last sons of King of the Pontiacs that will be available in California.

A son of a great 34 pound cow, the highest record bull yet sold at auction in the state.

A son of Colantha Johanna Lad, the first son of this sire offered at auction in California, and he is out of a granddaughter of Pontiac Korndyke.

Two sons of King Segls Pontiac Jannek, the great young sire owned by James J. Jeffries.

A son of King Pontiac Topsy, out of an 18.22 pound four year old daughter of Pietertje Hengerveld's Count De Kol.

Fourteen grandsons of King of the Pontiacs out of good dams, many with A. R. O. records.

In this sale Ernest Otto McClure, Santa Ana; A. Satterberg, San Jacinto, and P. H. Jarrett, Lancaster, will disperse their entire herds; McAlister & Sons, Chino; Santa Anita Rancho, Santa Anita; R. Nadeau, Saugus, and Aro Herd, Buena Park, will make consignments of choice cattle.

Extra good foundation females are present in large numbers in this sale, substantially bred and of very desirable type. And the bull offering is of a wide range, from the high class header for a registered herd to the well bred head of a grade herd. Of special attractiveness to dairymen is the group of young bulls, many of them grandsons of King of the Pontiacs.

Every animal in this sale has been tuberculin tested and has individual tuberculin test certificate. Catalog now ready, write for a copy.

**Registered Jersey Sale at Modesto**

On Tuesday, September 25, the California Breeders, Sales and Pedigree Co. conducted a consignment sale of pure bred registered Jerseys on the fair grounds at Modesto. Forty animals, mostly females, were sold, all to buyers of the San Joaquin valley. There were eight consignors to the sale; Guy H. Miller, Jno A. Orr, W. J. Hackett, C. W. Hackett, O. J. Ames, M. W. Brady, Fred B. Wulff, and the Riverina Farms. The sale was conducted by C. L. Hughes, manager of the sales corporation. Col. Ben A. Rhoades of Los Angeles assisted by Col. Cy. N. Clark of Modesto

acted as auctioneers. Some especially fine animals changed hands, going to the following list of buyers: J. E. Brashear, Mrs. W. H. Blankenburg, M. W. Brady, A. A. Johnson, J. A. Henry, David Hardie, D. M. Hackett, N. C. Lollich, L. P. Scheld, T. Sestino, E. Schneider, W. Wilson, C. L. Woodbridge, all of Modesto. O. J. Ames, Jr., J. Rockafellow, of Oakdale; E. W. Doane, Merced; L. R. Loper, J. H. Snider of Chowchilla; P. Rutherford, Turlock; E. E. Porterfield, Ceres; F. Kakinson, Keyes.—C. A. Briggs.

The Northwest Live Stock Show is to be held at Lewiston, Idaho, November 8-15.

Willowmoor Vesta IV

**ANOTHER AYRSHIRE CHAMPION**

Willowmoor Vesta IV (34150) has just finished her junior four-year-old advanced registry test for a year, qualifying with a record of 17755 pounds of milk and 753.18 pounds of fat, which entitles her to the junior four-year-old Ayrshire world championship in her class.

She was bred by J. W. Clise, Redmond, Wash., owned and tested by E. B. McFarland, San Mateo. She is

from Mr. Clise's famous Robin Hood strain. This record is all the more wonderful because she was on her fair circuit at the time of starting her advanced registry test, being entered in a five-day butter contest at Sacramento, making 10.69 pounds of butter fat. In a breed contest she scored the highest of any breed, 93 points. She weighed while on test 1280 pounds.—C. M. Winslow, Secretary-Treasurer Ayrshire Breeders Association.

**Encouraging the Layers**

Written for California Cultivator By Jean A. Koethen

**W**AR TIME tribulations of poultrymen will not have been in vain if they bring about a realization of the fact that many hens never are and never can be profitable layers and that many hens which might be profitable layers are spoiled by mistakes in management. The ovary of every hen contains hundreds of oocytes called oocytes. Many of these will develop into eggs. Many never will. Probably no hen has sufficient productive power to develop all the oocytes in her ovary, but the number she does develop depends largely on the encouragement she receives at the hands of the man or woman who cares for her. From 180 to 280 eggs a year is about all a hen can produce under the most favorable circumstances. Untoward conditions will cut her production in two. There was a time when just "keeping hens" seemed a guarantee of reasonable profit. Now we are beginning to understand that only the hen that does her best from the day she lays her first egg is worth keeping, and it is up to her keeper to make her do her best. Proper encouragement of the layer

begins before she is out of the shell. We might, indeed, go back to her grandmother as the ultimate beginning, but any discussion of breeding here will lead us too far afield. Granting that the pullet has been properly bred, that her mother was a high producer and her sire the son of a high producer, her usefulness will still depend largely upon the time of her hatching. The most profitable layers are those which begin in October or November, not only because they furnish eggs when eggs are bringing the highest prices but because they will have more months to lay before molting. Very many amateur poultry keepers delay their spring hatching for various reasons—hens don't go broody, perhaps, weather is cold or wet, more often the real reason is that they just don't get around to it—and then wonder why the

pullets do not lay. Bald facts are distasteful to a good many poultry keepers, but let us keep this one clearly in mind, that the average Mediterranean requires six months of growth before she reaches laying maturity and the average hen of the heavy breeds, from seven to eight months. There are exceptions, many of them, but we are speaking of averages. California poultrymen begin hatching in January, and some of them finish all their hatching before the first of April. On one big Leghorn plant I visited last spring all the hatching was finished in February. These February birds are very likely to molt in the fall but even then they are more profitable than late hatched pullets.

As soon as sex can be distinguished in the young birds, pullets should be separated from cockerels and given more room. On most farms the chicks can be given free range from the start, and this is a great advantage, for the pullet must develop muscle or she cannot become a productive layer. On the large poultry farms, where free range is out of the question, its place is taken by deep scratching litter in which the birds must dig for every grain they get. Even on farms where several thousand birds are raised in a season, a small run planted to barley can be given the chicks, and they find endless occupation as well as exercise in running about in the growing green. To raise chicks in bare yards is to invite disaster, not only because of the diseases which attack chicks raised in filth and idleness, but because the essential muscular development of the pullets is almost impossible under such conditions.

Green range during pullethood is of great importance, but is not more important than a sufficient ration of the right ingredients. Our preconceived notions of what a developing mash for pullets must be have been jarred somewhat by the high prices of feed, and we find it possible to get along without some things we thought we must have. Greens, meat, grain, these are the essentials. It doesn't matter so much what grain or what

meat or what green feed. My pullets this summer have had a mash of two parts oat chop, one part bran, one part alfalfa meal and a little less than one part fish meal. I should have preferred ground oats to oat chop and regret the omission of middlings, but the pullets have seemed to thrive and are beginning to sing as energetic pullets should. Their green feed all summer has been kale, and I cannot sufficiently congratulate myself on the good patch of it I planted last spring. It has given all my birds all the green feed they would eat and has helped to keep the hens laying far into the molt. Kale is not the best of green feeds. Alfalfa and clover are better because they contain more protein, but kale contains a considerable amount of mineral salts and is the most economical green that can be raised.

In addition to the green feed and the dry mash there must be a daily feeding of whole grain. A mixture of grains is best for the purpose, but one grain at a time, if the grain is changed from time to time, answers quite well. Expense must be considered, and the grain that can be had most cheaply can often be supplemented by other things. While I was feeding barley alone, as I did for a while, I gave the pullets frequent meals of boiled rice. Rice is not a cheap feed, but I happened to have a quantity of broken rice on hand, and the chickens, young and old, are fond of it. Whole barley is a dangerous feed when used to the exclusion of other grain. The hulls and beards pack the crop and impair digestion, often causing serious illness and even death. If the barley is soaked over night in cold water the hulls will be considerably softened. If they are soaked 24 hours and then sprouted the little hull that remains is of no consequence. Sometimes the barley may be steamed to soften the hulls. This is done by covering with cold water and leaving on the stove till it reaches the boiling point. If this is done at night and the barley allowed to stand till morning it will then be ready for feeding. Oats may be steamed in the same way.

## A Good Hatch

"I would like to tell you about a clutch of pullet's eggs I set this spring. I put 14 eggs under a Buff Orpington pullet, all my hens being April, 1916 birds. The eggs were due out on March 13. On that day there was no sign of any even cracked, so I just left her on the nest to see what would happen as I had always understood that pullet eggs were not fertile. On the morning of the 15th the hen walked out with 14 chicks all strong and healthy. I did not lose one and they are all alive now except those young roosters that I have killed to eat. Is not this rather exceptional or was it just good luck?—H. Beatrice Smyth.

A very exceptional hatch, and greatly to the credit not only of the pullets that laid the eggs, but of the

hen that hatched them. Very few Buff Orpingtons can get a brood of chicks out of the shell without some casualties. Their intentions are good but they are heavy and clumsy. I should keep that hen till she died of old age. There is no such thing as luck about hatching. Not only was your hen a good sitter but there was some reason for the unusual fertility of the eggs. Was it the vigor of the male bird, the care which the pullets had received or the ration which had been fed to all? These are questions you can perhaps answer for yourself as you compare the antecedents of these chicks with those of previous broods.—J. A. K.

# Straight Answers to Timely Questions

## What is Pratt's Poultry Regulator?

A positive tonic and conditioner for poultry of all kinds and ages. A health-builder and health-preserver. Not a food.

## What does it contain?

Roots, herbs, spices, mineral substances, etc. Each ingredient performs a certain duty. The combination spells "health insurance."

## What does it do?

Pratt's Poultry Regulator makes and keeps poultry healthy, vigorous and productive. It sharpens the appetite, improves digestion and circulation, hastens growth and increases egg-production. It saves feed by preventing waste due to poor digestion. It prevents disease by keeping the birds in condition to resist the common ailments.

## Has it been fully tested?

Yes! In general use for nearly fifty years. The original poultry conditioner. Imitated, but unequalled.

## Does it give general satisfaction?

Positively! Satisfaction guaranteed or money refunded. Test it at our risk. Increased egg-production will prove that "Pratt's makes hens lay."

## How is it best used?

Daily, in small quantities. For adults, a tablespoonful daily for 10 birds. Younger stock in proportion. Mix with dry or moist mash.

## What does it cost?

Nothing, because it pays big profits. One cent a month per hen is the investment required.

## Where can I get it?

From 60,000 Pratt dealers. There is one near you. Direct from the manufacturer, prepaid, if your dealer can't supply you.

## How can I learn more about it?

Ask the Pratt Food Co., Philadelphia, for valuable FREE BOOKS on poultry keeping. Write today!

## Science Says Buttermilk

Bulletin 162, just issued by the Department of Agriculture, states that Buttermilk is the only preventative of White Diarrhoea. It has been proven that many birds apparently in perfect health have these germs in their system and that they are transmittable to their progeny. Science has discovered that the Lactic Acid Bacilli of Buttermilk kills these poison germs. Write to Berkeley for this important bulletin, free.

The Dry Buttermilk in GLOBE A-1 BUTTERMILK MASH contains 10,000 live Lactic Acid Bacteria to the cubic centimeter.

Globe A-1 Buttermilk Mash is a high protein feed, free from any filler.

Globe A-1 Buttermilk Mash will prevent bowel troubles, keep your flock in glowing health, produce more eggs to market, better eggs to hatch.

Costs no more than non-buttermilk mash.

Satisfaction or Money Back.

**Questions and Answers**

ANSWERS BY EDITOR AND STAFF

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

**Feeding Poisoned Rabbits**

In your September 15 issue I note an inquiry from a subscriber at Nipomo relative to feeding strychnine-poisoned jackrabbits to chickens, dogs and hogs. I quote the following lines from the "American Journal of Clinical Medicine," October 1908, page 1369: "Poultry and Poison," which states that "poultry may be impregnated by administering nux vomica in the food to a degree that birds of prey eating it will die while the fowls suffer no prejudice, and their meat eaten at the table causes no inconvenience to human beings. This recalls an experience while serving with the army in the Indian country. I was a 'pejouta wichascha (persona grata) to many of the Yankton Sioux, and some of them prepared a very handsome wolf skin for me, I furnishing the strychnine with which to poison the animals. The Indians told me that the 12 carcasses from which the skins were taken had furnished the material for a big feast, and as the feet were yet attached to the skins prior to tanning I procured one of these and made a test for strychnine, obtaining a positive reaction, showing that the whole carcass was impregnated, but no harm came to any of the Indians who had participated in the feast. Indeed I learned afterwards that although large amounts of strychnine were being used and it was generally all consumed by the wolves, that the flesh of the poisoned animals was always eaten."—H. Lowry, Santa Paula.

**Early Peas.**

Please give information regarding best variety of early peas to plant method of culture, and whether October or November would be the best time to plant. Wish to plant the peas early in order to follow with potatoes and a later summer crop of corn. The land is on the eastern side of San Francisco Bay.—Subscriber, Los Gatos.

Regarding the best variety of early peas to plant, we would recommend either "Little Marvel" or "Alaska". The latter is a fine standard type and should the winter prove extremely wet and cold, this pea will stand the test. It is very popular amongst the canners. "Little Marvel" is of more recent introduction, but is gaining in popularity rapidly and is the most prolific of all the early varieties; each pod being well filled. Both are dwarf types.

Select the most sheltered situation you have for planting, as they will then be well protected from severe frosts, furthermore you stand a better chance of getting an extra early crop which really pays, and the chances of attacks from aphids are not so great.

The ground should be well plowed and disked. This work must be attended to as soon as practicable. If the selected site has been heavily cropped previously and not treated with manure, it would be advisable to apply a covering of farmyard manure and plow this well in, fairly deep.

For field culture the seed should be sown in rows two to three feet apart, three inches deep. It will take from 80 to 125 pounds to the acre. When

the peas are two inches high, providing the ground is not too wet, the cultivator should be run through the rows and kept in use as opportunity offers.

We think the question of time to plant depends upon the weather conditions. If we get early rains, then the middle of October would be a good time to plant, but if conditions are such that the ground will be dry immediately after planting, we would advise waiting, however, careful observation will prove a good guide and if conditions indicate substantial early rains in October, we would advise planting sometime next month.—A. R. G.

A similar question as to early peas for Southern California is answered by D. F. Reichard.

In favored locations early varieties of peas may be planted in October to make crop during late December and January. The best variety is the Laxtonian, a dwarf growing early pea with a good sized dark green pod. Notts Excelsior and the American Wonder peas also have their merits. After thoroughly soaking the ground to be planted, plow and work it down fine with a harrow. Plant the seed two inches deep in the moist soil, either with a drill or by making a furrow, using about one pound of seed to 300 feet of row. Have the rows 24 to 30 inches apart. If rains do not come shortly after the young peas are up, they should be irrigated, after which they should be cultivated.

**Pimiento Peppers.**

Am trying an experiment of growing pimiento peppers in lath house, starting the plants in cold frame and as they grow raising the glass up. They are fine healthy plants and have begun to flower, but I do not know whether they will mature. Am told that this part of the country is too dry for the pimiento to make flesh enough. I am using a heavy top dressing of well rotted manure which is kept well soaked with water, and I keep a pan of water beside the plants all the time hoping to create moisture around them.—Subscriber, Hemet.

Pimiento peppers are grown with complete success throughout Southern California during the warmer months and can be grown under glass by keeping a night temperature of 45 degrees to 55 degrees while the day temperature should run 15 degrees higher. Keep the plants in good growing condition, but don't keep your soil so wet that it will sour and soon kill your plants.—D. F. R.

**Borers.**

Please advise best method of preventing borers from getting into fruit trees.—Subscriber, Galt.

A heavy whitewash with plenty of salt to harden and make it stick answers well. This has no effect on borers already in the tree. They should be removed before the whitewashing by the use of a wire or should be cut out with a knife. Then cover with whitewash, which may be made still more effective by mixing in a quantity of tallow with the slaking lime. The formula given in our special spray number is as follows: Quicklime 30 pounds, Tallow 4 pounds, salt 5 pounds, water enough to make the mixture flow freely.

Another remedy is the application of two coats of hard asphaltum. This is often used in the spring after digging out the borers.

**Replanting Walnuts**

Have about 30 five-year-old walnut trees planted on loose dry land. The trees are only about two inches in diameter. I wish to transplant to land that is richer, with sub-irrigation. Please give best time and method of transplanting.—Subscriber, San Luis Obispo.

The trees could be transplanted by taking up the largest possible amount of roots with the body and cutting back the branches severely, leaving only three or five stubs not more than a foot long. This work should be done in January and the planting should be followed with water enough to firmly settle the earth around the roots. However, we think better results will be obtained by getting thrifty young trees from a nursery and planting in the desired places. Do not make the mistake of planting too closely. Walnut trees should be 60 feet apart on good land.—J. B. N.

**LIVE WIRE INSTRUCTION**

The manual training teacher of the high school at Lancaster, Antelope Valley, is doing some practical educational work in suggesting to the farmers of the valley that implement repairs be brought to the school where the actual work of repairing may give to pupils opportunity for experience and at the same time make cheaper repairs for the farmers. The training teacher, B. C. Hubbard, has written ranchers:

"You no doubt have a number of tools, wagons, double-trees and what not that need repairs. Say you need a new wagon tongue, mower tongue or repairs for the hay rack. We have a number of boys who will some day be ranchers and ought to know how to make the repairs on the farm in a neat and workmanlike manner. They need experience.

"Now what we propose is that you furnish the material and tell us what you want, and we will have it done as soon as possible without charge, other than for materials or metal work that we will have to buy elsewhere.

"Or, if you are going to build a chicken house, hog house, or any small farm building, we would be glad to make plans for you, and draw up a bill of material for it."

**DR. HESS  
Instant Louse Killer  
Kills Lice****Use Freely  
For Poultry and  
on Your Live Stock**

**For Poultry**—Seize the hen and dust Instant Louse Killer into the feathers. Sprinkle it in the nests, on the roosts and floors. For convenience sprinkle Instant Louse Killer in the dust bath occasionally—your hens will do the rest. This means louse prevention.

**For Stock**—With one hand stroke the hair the wrong way, with the other sift in the Louse Killer. It will do the rest.

NURSERYMEN'S ANNUAL

Continued from Page 351

Thursday Evening

George F. Wakefield, Planting and Care of Lawns; John Vallance, The Vegetable Garden as a Home Beautifier; D. W. Coolidge, Some Desirable New and Rare Plants; M. A. Benjamin, Tree Surgery, illustrated with lantern slides.

Friday Morning

Wm. T. Kirkman, Standardization of Commercial Nursery Products; State Commissioner G. H. Hecke, State Laws of Today; Earl L. Morris, Methods of Prevention of Tree and Plant Diseases.

Friday Afternoon

Trip to Alum Rock Park, with luncheon.

Dedication of Hilgard Hall

On Saturday morning the nurserymen will go to Berkeley where on the campus of the college of agriculture they will assist in the dedication exercises of Hilgard Hall. Participation in the dedication of this magnificent building, named in honor of the first dean of the college of agriculture, will be an honor to the members of the association. After the dedication exercises President Coates will call the convention to order in one of the rooms of Hilgard Hall, where Prof. Babcock will talk upon The Vital Question and Dr. Coit upon Advantages of Selected Scions From Recorded Trees.

GUARANTY SALE

December 5 has been set for the date of the Holstein Breeders' Guaranty Sale at Sacramento, California. It is expected that about twenty leading breeders of California will consign some of the top animals from their herds.

At a meeting of prominent breeders a committee was named to select and pass on all cattle before consignment to this sale, the committee consisting of Frank L. Morris of Woodland, James W. McAlister of Chino, and C. L. Hughes of Sacramento.

Eighty head will be gathered for this sale, which promises to be the most important Holstein event that has yet taken place in the west. California Breeders' Sales and Pedigree Company will manage the sale.

### Majestic answers the call to economy

The Majestic answers the nation's call for war on waste. It *saves—all ways*: Uses less fuel; because it is riveted tight and holds all the heat in. Prevents food waste because its heat-tight oven bakes perfectly. Cuts repair bills and outlasts three ordinary ranges, because its malleable parts are unbreakable and its charcoal iron body resists rust three times longer than steel.

U. S. Government orders over 150 carloads of Majestics—because the Army must have the best range service.

Do you know that now much less crops will buy a Majestic than a few years ago? Less than 2 acres of corn pays for it—think how little seed and labor you give for an article that means so much to the whole family. One quality; many styles and sizes. There is a Majestic dealer in every county of 42 States. Send for free booklet and name of dealer near you. Majestic Mfg. Co., Dept. 203 St. Louis, Mo.

## PERFECTION OIL HEATER

### MORE BETTER LIGHT

Install a PRIVATE GENERATING PLANT and have ELECTRICITY FOR LIGHT AND POWER. The Uni-Lectric system generates the standard 110-volt direct current, which will operate from 1 to 50 lights. It will run your sewing machine, electric iron, vacuum cleaner, churn, washing machine, etc.

#### NO BATTERIES—NO SWITCHBOARD

High speed gasoline motor, generator and automatic governor, all complete. Uses standard lamps and fixtures. Can be used for one or more houses.

### ONE, TWO, THREE

It was an old, old, old, old lady,  
And a boy that was half past three;  
And the way they played together  
Was beautiful to see.

She couldn't go running and jumping,  
And the boy, no more could he,  
For he was a thin little fellow  
With a thin little twisted knee.

They sat in the yellow twilight,  
Out under the maple tree;  
And the game they played I'll tell you,  
Just as it was told to me.

It was hide and go seek they were playing,  
Though you'd never have known it to be—  
With an old, old, old, old lady,  
And the boy with the twisted knee.

The boy would bend his face down  
On his one little sound right knee,  
And he'd guess where she was hiding,  
In guesses one, two, three.

"You are in the china closet..."  
He would cry and laugh with glee—  
It wasn't the china closet,  
But he still had two and three.

"You are in papa's big bedroom;  
In the closet with the queer old key..."  
And she said: "You are warm and  
warmer,  
But you're not quite right," said she.

"It can't be the little cupboard  
Where mama's things used to be—  
So it must be the clothespress, gran'-  
ma..."  
And he found her with his three.

Then she covered her face with her  
fingers,  
That were wrinkled and white and  
wee,  
And she guessed where the boy was  
hiding,  
With a one and a two and a three.

And they never had stirred from their  
places,  
Right under the maple tree—  
The dear, dear, dear old lady,  
And the boy with the lame little knee.  
This dear, dear, dear old lady,  
And the boy who was half past three.  
H. C. Bunner.

### JOY IN WORK

ONE of the most delightful and satisfyingly sensible household writers we meet in going through our exchanges is Hepsy Neff of Wheaton, Illinois. The article we give here is written by her for the National Stockman Farmer. It is much along the line of letters we have had in the Cultivator from our California home makers, so that is another reason for reproducing it; we know it will be appreciated.

Perhaps August, the busiest month of a busy season, may be thought a poor time to talk about joy in work. To my mind it is the very best time. Work has been crowding, and is crowding, until we are bewildered and do not know what to do first. Such a state of things offers the best kind of an argument for not doing some things at all and weeding out all unnecessary. The very first essential of joy in work is to choose between what it worth doing, what is profitable, and what is not worth doing just now. No one can find joy in work that does not pay; that offers neither profit nor pleasure. Work must pay either in profit or in pleasure, or both, before it can even begin to be joyous. No, this is not a sermon on Thrift. That subject has been turned over to our thoughtful men and women. But thrift is like the devil fish of the sea; it has so many tentacles that one can hardly escape its long arms. Profitable working is as necessary as profitable saving and joy in work is equally necessary.

Perhaps we shall need to find something else beyond profit; beyond even pleasure, before we shall find joy in our work. We are queer bipeds, we women. Quite likely men know nothing at all of that exasperating prick—that goad of conscience which says, "What will they say when they see what I have done?" "They" being neighbor Brown or Grundy or Smallweed. You would put your clean,

white sheets in the drawer with the fragrance of the summer still lingering in their unironed folds, but what would Mrs. Grundy say if she should see them? You would sweep your house only when conditions plainly demanded a broom, instead of daily or weekly, as has been your custom, but what if Mrs. Brown should call! You have not baked a pie for a week or a month, but are in terror for fear Mrs. Smallweed should drop in and catch you without a pie in the house. No joy for you in sweet-smelling sheets or a merely tidy house or good apple sauce so long as you are in terror of Mrs. Grundy.

A few miles away lives the most famous woman gardener in all the countryside. The first bulbs of spring bloom in her garden and the last petals of the autumn fall upon her table. All summer long she lives out of doors. Some of our immaculate housekeepers would simply fall in a dead faint the moment they stepped across her threshold. Her house is a perfectly good shelter, eating place and sleeping place. Let those who wish to do so entertain; she finds more joy in her roses.

A little farther away lives a woman who devotes very much of her time to birds. Already she has published most interesting articles on bird music and has reproduced bird notes for the piano, making both the bird and the carol familiar to thousands of people. Plainly she cannot be at the piano and wielding a broom at the same time. Is the point clear? If you want an immaculate kitchen, if you want your highest joy in scrubbing, and washing and ironing and baking and serving, Heaven bless you in it. The man who loves astronomy would rather study the stars than eat. The man who loves his engine could not be dragged away from it with a cart rope. But other men do not feel themselves disgraced unless they sit up nights watching the stars or smear their clothes with engine grease. Why can't women be as sensible?

But some one will say, women have no choice in the matter. They must cook and keep house whether they find joy in this kind of work or not. Some truth there I admit. Perhaps the man who loves to study the stars would have little time for his chosen work if he must embroider his trousers and tat his collars and do his hair in fearful and wonderful shapes at least twice every day. There are some frills that women can cut off when they really want to do so. Then in the matter of eating. Who taught men to want ten different kinds of foods at a meal? "Somebody will say something." Of course. And when you have done and outdone all the talkers they will still go on talking. Then where is your joy in your work, your joy which you have a plain and inalienable right to have? You have missed it and when you have missed it a dozen years or so the corners of your mouth begin to sag and the wrinkles gather between your eyes. What is the use?

We cannot do all the things we should like to do nor half of them. But we can make a beginning. We need not be selfish, either. We can meet the actual needs of our families. We can do something to show them the difference between needs and wants. We can learn that difference for ourselves; and until we do learn it nobody can do much to help us find joy in work.

## The Cultivator Patterns

- 8500—Girls' Dress. Cut in sizes 6 to 14 years. The dress is in one piece and has a shield.
- 8515—Ladies' Camisole. Cut in sizes 34 to 44 inches bust measure. This camisole is very simple and easy to make.
- 7992—Ladies' Waist. Cut in sizes 36 to 42 inches bust measure. Linen, or crepe de Chine can be used for this waist.
- 8487—Ladies' House Dress. Cut in sizes 36 to 44 inches bust measure. Sleeves may be long or short and the skirt is cut in three gores.
- 8498—Misses' Dress. Cut in sizes 14 to 20 years. The dress is cut in one piece and is to be slipped on over the head.
- 8517—Girls' Empire Coat. Cut in sizes 4 to 14 years. The collar may be rolled high or low and the skirt section is in three pieces.
- 7624—Ladies' Skirt. Cut in sizes 22 to 34 inches waist measure. Skirt is cut in three gores.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH.

### HOW TO ORDER PATTERNS

Write your name and address plainly in full, give correct number and size of each pattern you want, and send ten cents in coin or (1 or 2c) stamps for each number. In order to furnish our readers with the very latest New York City styles, all pattern orders are filled in New York City. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

## VINEGAR FROM FRUIT CUTTINGS

By W. V. Cruess

Vinegar can be made from many waste fruits not suitable for canning or jelly making. For example, fruit peelings, cores, etc., can be used to advantage. In certain seasons of the year grapes can be obtained for a very moderate price and can be used for vinegar making. The University of California college of agriculture recommends the following methods:

### Vinegar from Whole Fruit

Crush fruit thoroughly and heat almost to boiling. Press out through a jelly bag or cloth while still hot. Allow the juice to cool over night in a quiet place. On the following day add one cake of compressed yeast to each three gallons of juice. One yeast cake will be enough for three gallons, but will not be too much for quantities less than three gallons. Crush the yeast up in the juice so that it is well mixed with it. A wooden bucket or barrel or a stoneware crock should be used. Do not use a kettle that is made of metal to hold the juice. Allow the juice to ferment. This will take about ten or 12 hours. When the fermentation is over, add to each three gallons of the fermented juice one quart of strong vinegar. If less than three gallons is made, add the vinegar in the same proportion. Leave the vinegar in an open crock or barrel, covering the container with cheese-cloth to keep out insects. Allow it to stand until it is sour enough to use. In making up a second lot of vinegar after the first has been made it will be possible merely to ferment the juice with the compressed yeast as described above and then add one quart of the home-made vinegar instead of the vinegar that is bought at the store. Thus the only vinegar needed to start the home vinegar is the first quart of vinegar. Under no conditions should the vinegar be added to the juice until the yeast fermentation is over. The vinegar will kill the yeast fermentation and prevent the making of vinegar if it is added before the yeast fermentation is over. The yeast fermentation is complete when the liquid no longer gives off bubbles of gas and when there is no longer a taste of sugar.

### Vinegar from Fruit Scraps

Such scraps as peach peelings, apple cores, etc., can be used for making vinegar. Sugar, however, must be added in this case. To every cup of scraps add about three cups of water and boil for 15 or 20 minutes. Press out the watery juice. To this juice add about one pint of sugar to the gallon and dissolve. Allow to cool over night. Add compressed yeast and proceed as in above recipe. The vinegar made in this way will not be so good as that made from the whole fruit, but still a very palatable product can be produced.

### OCTOBER PRIZE CONTEST

For our next contest we are going to ask for original stories of from 100 to 400 words, subjects to be chosen by the writers.

#### Cash Prize

For the best story the Cultivator will give a cash prize of \$2.00; for second best, \$1.00; for all others published one year's extension of subscription unless such extension has already been granted in 1917.

Stories will be published in Cultivator of October 27. All should be received in this office by or before Thursday morning, October 18. Please write on one side of paper only.

*The thin, slim camera that fits the pocket.*

## The 2c Kodak, Jr.

The long narrow picture (2 1/8 x 4 1/8 inches) is best adapted to the average view. For landscapes it cuts out the undesirable surplus sky and foreground; for portraits it gives the pleasing panel effect. And this shape in the picture makes possible a slim, thin camera that fits the pocket.

And with this compactness and convenience this efficient little camera is up-to-date in every detail. It is well made all the way through, has lenses that are right and a shutter that works with a mechanical precision that is a delight—and it is sold at a price that is only made possible by the resources of the largest and most perfectly equipped camera factory in the world.

It is autographic, of course, (all Kodaks are now autographic) enabling you to date and title every negative at the time you make the exposure—before you forget.

#### THE PRICE.

No. 2 Autographic Kodak, Jr., with meniscus achromatic lens and Kodak Ball Bearing shutter.	\$12.00
Ditto, with Rapid Rectilinear lens.	14.00
Ditto, with Kodak Anastigmat f.7.7 lens.	19.00

Ask your dealer to show you the "two-c Kodak," or write us for catalogue.

EASTMAN KODAK CO., 473 State St., ROCHESTER, N. Y.

## TOWER'S FISH BRAND REFLEX SLICKER

is a corker for staying on the job.

Waterproof Absolutely.

Satisfaction Guaranteed.

DEALERS EVERYWHERE.

## THE ORIGINAL CHEMICAL Indoor Closet

30,000 SOLD—FIFTH YEAR  
More Comfortable, Healthful, Convenient  
Eliminates the out-house, open vault and cess-pool, which are breeding places for germs. Have a warm, sanitary, odorless toilet right in your house. No going out in cold weather. A boon to invalids. Endorsed by State Boards of Health.

**ABSOLUTELY ODORLESS**  
Put It Anywhere In The House  
The germs are killed by a chemical process in water in the container. Empty once a month. No more trouble to empty than ashes. Closet absolutely guaranteed. Guarantee on file in the office of this publication. Ask for catalog and price

ROWE SANITARY MFG. CO. 6th ST., DETROIT, MICH.  
Ask about the Ro-San Washstand—Hot and Cold Running Water Without Plumbing

## Save 1-2 on Fuel

**CHEAPEST HEAT YOU CAN BUY**  
The Stevert Oil Burner burns distillate costing only 5 1/2 cents per gallon in cook stoves, heaters, furnaces, pasteurizers, boilers, etc. Absolutely safe, odorless, very convenient and low priced. **MAKES HEAT AT HALF WHAT WOOD AND COAL COSTS.** Install it yourself. Write for circular and prices on different sizes, address Stevert Oil Burner Co., 710 North Main St., Los Angeles.

When writing advertisers, mention the Cultivator.

# Poultry can be made to Pay

HERE are two methods of gaining knowledge, necessary to make poultry a success; experience—which is a long, drawn out, expensive road and the one too commonly used. Another method is by the careful studying of books written by practical poultry people who have made mistakes and successes and are willing to give this information in order that you may take the short road to poultry success.

## Poultry for Profit

BY  
**Jean A. Koethen**

Graduate of University of Calif.

Gives more practical knowledge of every branch of the poultry business in a more concise and simple manner than any similar book published. With the knowledge gained by a study of this work experience in the poultry business is not as necessary. Through its guidance obstacles are overcome before it is too late.

The book is 5½x8 inches and contains 12 chapters, with over 225 pages of text and 18 pages of illustrations, printed on egg-shell book, binding full cloth vellum de luxe.

Equip yourself mentally first.

The Alfalfa Growers' Association of  
Southern California writes:  
"The Association is now asking \$23.50  
for No. 1 cow hay f. o. b. cars Los An-  
geles and Southern California points.  
The later cuttings are short and we are  
experiencing a shortage in our crops.  
Hay is selling very readily and all buy-  
ers are offering high prices. We have  
heard nothing under \$20 per ton being  
offered the growers for alfalfa. That  
price offered is of course net to the  
grower. We find that little hay is stored  
for this winter's use and that there will  
undoubtedly be a shortage before  
spring."

#### POULTRY

Receipts were very light yesterday,  
only 14 coops of chickens having arrived  
by express. Trading was almost at a  
standstill. Two and possibly three cars  
of Eastern chickens are expected to ar-  
rive today and dealers said that buyers  
were holding off in their purchases until  
this Eastern stock was on the market.  
While there was not enough trading to  
justify new quotations, the market was  
easy and dealers predicted that spring  
chickens would open today at about 1  
cent per pound under yesterday's figures.

HOPS

Per lb: California crop of 1917, 35¢@40¢; on contracts, spot, 1916 crop, 18¢@22¢; old, 8¢@15¢.

HAY

Under date of September 29, Scott, Wagner & Miller say: Receipts past week 2196 tons, last week 2848 tons. Several orders for hay out of warehouses have already been placed for shipment to this market and the only reason that the receipts are not heavier is that cars have been practically unobtainable. We do not see that the car situation is going to be any better. The railroads hold out no hope for improvement. Much of their equipment is busy moving government supplies which of necessity must be given preference. The market has been well maintained and we believe can be quoted \$1.00 per ton higher. Fancy wheat and tame oat hay are in good demand and selling at top figures.

Fancy Wheat Hay (light 5 wire bale, ton)	23.00@24.00
No. 1 Wheat or Wheat and Oat Hay	20.00@22.00
No. 2 Wheat or Wheat and Oat Hay	17.00@19.00

FISH

The following are the maximum retail prices at which these varieties of fish could legally be sold on Tuesday, October 2, 1917, in San Francisco, Oakland, Berkeley and Alameda. Dealers are free to sell at lower prices, but could not legally charge more. Purchasers who are overcharged are invited to make complaint in writing to the State Market Director: Codfish, cleaned or sliced, lb. ....12½¢ Flounders, whole .....12½¢ Mackerel, whole .....10¢ Rockcod, weighing less than 5 lbs., whole .....15¢ Do, weighing over 5 lbs., whole .....12½¢ Do, black, whole .....10¢ Sable fish .....6¢ Salmon, cleaned or sliced .....25¢ Sanddabs, whole .....10¢ Skate, cleaned .....5¢ Smelt, whole .....13¢ Sole, large, whole .....10¢ Do, small, whole .....5¢ Do, fillet, black skin off .....17½¢ Do, fillet, black and white skin off .....20¢

Citrus Fruit Market

Los Angeles, Oct. 3, 1917.

A much better price obtains in the orange market and Valencia are selling remarkably well. Shipments are running around 50 cars per week, which is exceptionally low. Shipments of lemons are very light, also running from 40 to 60 cars. Prices at present very satisfactory.

Shipments

Shipments of oranges from Southern California since November 1, 1916: 33,782 cars, lemons 7526, total 46,308; to same date last season oranges 30,541, lemons 6673, total 37,214. From Central California to date this season oranges 5044, lemons 164, total 5208; to same date last season oranges 5396, lemons 146, total 5544. From Northern California this season oranges 845 cars; to same date last season oranges 610, lemons 1.

WEEKLY WEATHER AND CROP REPORT

San Francisco, October 2, 1917. Light showers occurred during the week in the southern coast counties and in the interior of the valley as far north as Sacramento. They began in the south on September 28 and ended in the north September 29. The amount did not exceed a trace at any of the reporting stations and consequently the damage to raisin grapes, prunes and apples in the process of drying was inconsequential. Unusually warm weather prevailed in nearly all parts of the state during the fore part of the week, and this weather was on the whole favorable, except in the case of wine grapes, which were shrivelled somewhat by the heat. Excellent progress was made in drying raisin grapes and the bulk of the crop has been secured in excellent condition. Prune drying is practically finished and the apple harvest is well advanced. Both crops are turning out as well as expected. The gathering of wine grapes has become general and while the crop is not a heavy one, the quality is better than usual.

The sugar beet harvest is proceeding slowly, principally on account of scarcity of labor. Beets generally are undersized; but their sugar content is high and the crop on that account is a very good one. The bean harvest is drawing to a close and the crop is large, more on account of increased acreage than from the productiveness of the vines, which in many places did not mature a good crop, due to a number of causes, not the least of which was damage done by insect pests.

An excellent crop of rice is being harvested, under favorable weather conditions. It is the best rice crop ever raised in California and from about a million acres planted to rice yields as high as 35 to 45 sacks to the acre are common. Late potatoes are maturing nicely and this crop has improved considerably since the rains of the preceding week.

Walnut picking has become general and the crop is better than expected. Strong winds on the 28th aided greatly in harvesting this crop in Santa Barbara County. Lemons bloomed a little all the week in Orange County and a few have been picked at Lemon Cove in Tulare County.—E. A. Beals, District Forecaster, United States department of agriculture weather bureau.

MARKET NOTES

Receipts of butter and eggs in the San Francisco market the past week have been practically nil. Prices are so high that the demand has fallen off and anyway the supply is light. On one day last week a consignment of 1444 cases of dehydrated eggs was received from China.

The recent rise in butter quotations on the Los Angeles market is credited by dealers to the fact that a Northwest broker took a large government contract which he was unable to fill in his own section, so he was forced to come to San Francisco to obtain supplies and this sent up both the San Francisco and Los Angeles markets.

Owing to the fact that the corn crop came through without suffering frost damage the country's supply of canned corn will be fully up to expectations. Corn prices are holding up.

A campaign has been started by the United States food administration, to cover the months of October and November, when all grocers of the country will be asked to urge consumers to buy and store in their homes supplies of potatoes. This it is thought will induce a larger consumption of potatoes and thereby save wheat.

Higher prices on cheese, 22 per cent above last year, have decreased consumption until large warehouse holdings are proving embarrassing and it is possible reduction may be necessary.

Eggs are coming out of cold storage very rapidly and yet prices continue to mount higher. Los Angeles cold storage houses report about three per cent more eggs in coolers now than a year ago.

The Michigan bean crop has been materially lessened by weather conditions and the department has made a ruling that no more futures shall be sold until harvest.

Wholesale prices on onions are resting around \$2.25 to \$2.50 and some dealers are asking as to the possibility of a corner similar to that of last year when fabulous prices were secured. It is generally thought this will not be the case in this year's market.

New York state Elberta peaches filled the fruit markets last week. During the week a total of 1662 cars were shipped to New York. The week previous the shipment was only 193 cars.

The apple shipping season develops the fact that the supply is heavier than anticipated but in face of that fact prices are firmer and even slightly higher.

New York has moved more than four times as many cabbage as last year this date and its shipments of celery are likewise heavier.

Save your money and buy a Liberty Bond.

Olive oil is in keen demand. A local daily has: "It was reported last week that one large Southern California packer sold 1500 gallons for bulk shipment at \$3.20. This is the highest price yet recorded, in fact, it is more than a dollar above normal.

Potato prices are hardening. Los Angeles reporting big shipments at from \$3.25 to \$3.40, this for first class stock. One complicating feature is the shortage of shipping facilities.

Dried fruits are selling well. Some growers are still refusing to sell excepting when long prices are made.

Riverside Fair

By R. L. Taber, Secretary

The final nail will be driven in the plans for a greater Riverside County Fair so that all will be in readiness for the opening of the fifth annual educational exhibition on the morning of Tuesday, October 9 when Governor William D. Stephens presses the button to set in motion the wheels of the fair.

The Riverside fair this year will combine for five days an exhibition of

All of the 21 departments at Riverside have been enlarged and filled with new exhibits. Particular attention is being paid to food production and food conservation with exhibits from the state council of defense, Herbert Hoover, food administrator and other sources. There will be daily demonstrations of various foods on all parts of the grounds.

A \$5000 program of horse races, bringing forth the fastest running and

Going to Riverside

livestock, dairy products, goods from the apiaries, women's work, educational features and other displays gathered from every corner of Southern California.

Livestock in greater numbers will be exhibited this year. A number of the famous Tamworth hogs from the Rancho El Rincon near Chino will be exhibited. These English animals are new to Southern California. Peters, Lamson & Walker of Devore will make a large showing of Duroc-Jersey animals as will Joseph S. Prendergast of San Bernardino. From the Elliott-Brant Rancho at Owensmouth will be shown some famous Guernsey cattle as well as from the Hollow-Hill Farm of Colton. Other livestock exhibitors will be F. L. Hall, Perris, Jersey cattle, Berkshire hogs and heavy draft horses; Falladale Farm, Perris, Duroc-Jersey swine; Charles Fish, Rialto, unregistered driving horses; Dixie Ranch, Corona, Belgian horses.

trotting horses on the Pacific Coast, will be on the card each afternoon except Thursday, Indian Day. On that afternoon the Indians from all reservations and government schools in the Southwest will meet at the fair for Indian sports and pleasures. A feature of the day will be an exhibition by 700 students from Sherman Institute.

An exhibition of all the prize winning stock in front of the grandstand on Friday night will bring forth the best blooded horses, cattle, swine, sheep and goats in Southern California. These animals will be paraded in front of the grandstand by their proud owners and grooms, following the presentation of the awards by judges of all livestock.

This 1918 Surelay Egg Record Calendar  
Will Help You in Your Poultry Business

5

Keeping an accurate monthly account of the number of eggs your hens lay, the cost of feeding them and to know whether or not you are making a satisfactory profit out of your hens, are essential, if you want to make a success of the poultry business.

2

1

It is easy to keep these records with a SURELAY Calendar, devised and planned especially to meet your particular needs. Every poultryman should have one and use it.

9

2

This valuable and beautiful three color Calendar will be mailed to you without cost on receipt of the special Calendar Certificate to be found in every sack of SURELAY manufactured after October 1st. You will find it just as serviceable for keeping your records as SURELAY is for making your hens lay the most eggs at the lowest possible cost.

## Why Sportsmen choose the "94"

The Winchester Model 94 repeating rifle is chosen by more sportsmen than any other because of its wide variety of uses.

The Model 94, as nearly as any rifle on the market, is an all-round rifle.

Deer hunters choose it because it is a sure game-getter within the range that most shots at deer come.

Campers and canoe hunters take it because it is accurate even for birds, makes very little noise, and will stand all sorts of rough handling.

New shooters prefer it because of its lightness and very slight recoil.

Farmers demand it because they can get it in the exact caliber they need, at a low price, and can buy the ammunition for it anywhere that firearms are sold.

Because of this wide adaptability the Winchester Model 94 is the gun for the one-gun hunter; but for the same reason it is also a great favorite with sportsmen who own many guns.

The Winchester Model 94 is furnished in a great variety of styles, in five different popular calibers, (.25-35 and .30 Winchester, .32 Winchester Special, .32-40 and .38-55 cartridges), and in an extra lightweight model (weight about 7½ lbs.). For the high power cartridges this rifle is fitted with a nickel steel barrel.

### The barrel is the gun

Men who know guns realize that the accuracy and durability of a

rifle lie in the barrel. On the quality of the barrel depends the quality of the gun. There is absolutely no difference in the standard of quality of the barrels on the highest and lowest priced Winchester guns. With Winchester the barrel is the gun and the single standard of quality has been attained only by the most unremitting attention to the boring, finishing and testing of the barrel.

### The Winchester barrel

The barrel of the Winchester Model 94 has been bored to micrometer measurements for the cartridge it is meant to shoot. In rifling the barrel, the exact twist that is necessary to produce the best results with a given cartridge has been mathematically calculated and is verified by exhaustive practical tests before leaving the factory.

A bullet fired from a Winchester barrel spins point on with unerring accuracy to the limit of its range. The Bennett Process, used exclusively by Winchester, gives the Winchester barrel a distinctive blue finish that, with proper care, will last a lifetime.

### What means

This mark on the barrel means *Viewed and Proved Winchester*. This stamp stands for Winchester's guarantee of quality, with 50 years

Strong, smooth action, few working parts of the Model 94

of the best gun-making reputation behind it.

Every rifle that bears the name "Winchester" and that is marked with the Winchester Viewed and Proved stamp has been fired many times for accuracy and smooth action, and with excess loads for strength. At every stage of Winchester manufacture, machine production is supplemented by human craftsmanship. It is a *test and adjustment process*.

It is this thoughtful care in manufacturing that has produced in the Model 94 a rifle of unsurpassed game-getting qualities and that has made it the favorite with hunters the world over.

Write for details of Winchester rifles, shotguns and ammunition

The Winchester catalog is an encyclopedia on rifles, shotguns and ammunition. Every hunter should have one. It gives detailed specifications of the Model 94 and describes at length the principles on which every one of the world famous Winchester rifles and shotguns is built. Write today. We will mail you a copy free, postpaid.

WINCHESTER REPEATING ARMS CO.  
Dept. XX-2 New Haven, Conn.

MODEL 95—Lever Action Repeating Rifle, solid frame or take-down. The first box magazine lever action gun ever put on the market and still the standard of its type. Shoots heavy cartridges and delivers a bullet with tremendous force at long range. Calibers .30 Army, .30 Government models 1903 and 1906, .303 British and .35 and .405 Winchester.

MODEL 92—Lever Action Repeating Rifle, solid frame or take-down, 24-inch barrel. Made for .44, .38, .32 and .25/20 Winchester cartridges.

MODEL 07—This is the world-famous .351 Hammerless, Take-down Self-loader, shooting only its own .351 caliber Winchester cartridge.

MODEL 10—Hammerless Take-down Self-loading rifle. Shoots only its own Winchester .401 caliber cartridge. No rifle made equals the Model 10 for delivering five as powerful blows in as few seconds.

## Leading Other States in Land Settlement

America Has Been Prodigal In Her Distribution of Public Lands. As These Are Exhausted Serious Condition Confronts Settlers. California Movement Will Doubtless be Imitated in Many States

**N**O state which has rich soil and favorable conditions for producing but has been promoted by more or less mistaken or dishonest operators. Cheap lands have been purchased, irrigation systems installed, roadways laid out—sometimes graded—and 25 to 50 per cent selling expense and perhaps 15 to 50 per cent profit has been added, and the "farmers" have been secured from wherever gettable, and the project too often has ended in heartache and ruin for those who have been "promoted."

As noted above, some of these promoters have been mistaken. They have been told of certain trees or certain plots of a few square feet, or sometimes of a certain plant which has produced such yields that if an acre or five acres or some other number of acres could be secured it would mean a fortune. They have heard the story told and have told it until they affect at least to believe it, and it is retold to the would-be California farmer who comes to the state with a life's savings which may be only sufficient to make the first "one-third down," with one-third in one year and one-third in two years, at ten per cent. Of course the future payments are always to be met by returns from the land—but the story is so familiar to need repeating. No section of California but has heard it, and for years careful observers have been appealing for a correction of this evil and for honest dealing with ourselves and our would-be citizens. Since Dr. Elwood Mead went to Australia as an irrigation expert and returned after having worked in land settlement projects, he has brought back to California so much information and so much enthusiasm that Californians have been asking: "Can we apply these land settlement methods, partly

European and partly Australian, to California conditions?" At first we all denied the practicability of such a scheme. But it was worth thinking about, and we thought, we acted, and finally the legislature acted, and now the land settlement commission is a reality, and in its hands is the sum of a quarter of a million dollars, with a small additional sum for the expense of initiating the measure.

At the close of one of the meetings of this board held in Sacramento during state fair week we had the pleasure of a few minutes interview with Chairman Mead as to the hopes of the commission regarding its work. He referred to the fortune and to the happiness brought to many a settler in New Zealand and in Australia because of similar efforts giving opportunity to many people who are capable but have been unfortunate. Homes have been established and capital advanced for equipping farms, and while there have been occasional failures the successes have generally overbalanced them so that the experiment has proven a winner and is even making new capital for the state to use in enlarging its work along similar lines. The plan followed is for the state to purchase a large tract, expediting, if not every acre, at least every plat, determining not only surface conditions but subsoil conditions; a price is fixed according to the estimates of this expert, this price to cover original cost, the cost of irrigation or other improvements, and perhaps \$20 per acre added for operating expense.

The smallest of these plats is of 20 acres, and from that they will range up to 100-acre size. The average, however, is expected to be not far from 40 acres. One of the first requirements which will be made is that the farmer must agree to conduct diversified farming. He must be a live-

stock keeper as well as fruit grower. The commission is firm in the belief that this diversified farming is the only means of securing assurance of success.

We say that the smallest plat is to be of 20 acres. This is true excepting that near the center of the settlement will be a section of one and two acre plats for laborers' homesites, and presumably this center will also become a social and, to a certain extent, a commercial center. There will be a superintendent or farm agent who must to an extent be an expert in agricultural practices. His services will be at the command of settlers. At present the work of the commission has to do only with selection of the site. From Circular No. 1 we note that the commission is asking for land which must have real agricultural value. In making request for information as to available lands the board gives its plan as follows:

The board desires from four to six thousand acres for subdivision, improvement and settlement. This land should be either irrigated or suitable for intensive cultivation and stock raising without irrigation, either in one tract or a few contiguous tracts. Owners of land of the character indicated, and who are willing to sell on the terms hereinafter outlined, are invited to communicate with the board.

The board will enter into a contract with the owners under which it will make a cash payment of five per cent and will immediately begin subdivision and improvement of the property, expending whatever is necessary of the state appropriation of \$260,000. The land will then be opened for settlement and as settled a cash payment of 45 per cent of the purchase price of the settled portion, making one-half of the purchase price, will be made. The remainder will be paid in

amortized payments, which may be extended over 36 years as a maximum, interest on deferred payments to be made at the rate of five per cent per annum.

Regarding this effort of California to give practical aid to the farmer and to the government a writer in Century says:

"When the war is over, it is safe to assume that most of the countries of Europe will turn their attention to the intensive cultivation of the land. England will endeavor to feed herself instead of being dependent upon America and Denmark. Canada was already experimenting with this policy as well as with the taxation of land values to break up large estates, and will seek to lure settlers not only from Europe, but from the United States \* \* \*. And partly in anticipation of these conditions, the state of California has created a state colonization commission which is projecting a big program for colonization of home-owning farmers in the state \* \* \*."

"The state-aided farm colony plan does not fully meet the agricultural problem. It does not solve the difficulties of marketing or of transportation. It does not provide cold-storage warehouses or terminals. Nor does it insure cheap land, which is essential to successful agriculture. It does, however, lend the aid of science to agriculture. It does provide education and direction by experts. It offers very cheap credit. Most important of all, ownership awakens ambition and hope. It insures permanency of tenure. It aims to reestablish conditions similar to those which peopled America with land-hungry immigrants in the days when land was to be had for the asking, and places agriculture on a firmer foundation of security than that which now prevails."

**F**ORTUNATE in being located in the center of a large and productive area of the great San Joaquin Valley, and equally fortunate in having a body of energetic men to promote its annual district fair, the city of Fresno is putting on an exposition that is a credit to California. True, there are a number of improvements that should be made in connection with the livestock division of the fair, but these matters will be worked out all in good time. The officials in charge of the livestock department devoted their entire time during the week toward making exhibitors comfortable and extending them every courtesy. For instance, the price of alfalfa hay was very reasonable, the stalls were all bedded down free of charge when the exhibitors arrived, and wagons and teams were furnished free for hauling to and from the fair.

## Fresno District Fair

Showing of Livestock, Fruits and Soil Products of San Joaquin Valley at the State's Center

But some very important things were overlooked and a discussion of them at this time is in order: First, the fair directors should eliminate prize moneys for all those breeds which rarely show and when they do show have no competition; secondly, separate classification should be made for Milking and Beef Shorthorns; third, exhibitors should be awarded prize money won before leaving the grounds. Modesto has given this matter first consideration, and it is an excellent plan because many of the young breeders are inconvenienced if they have to wait until they return

home before receiving premiums. Fresno is not the only fair in California at fault in these matters, and it would be an excellent idea if the associations got together and adjusted premium lists, had some binding understanding with carriers so that stock cars could be handled with dispatch, and adopted every advanced method practiced by the larger fairs so that exhibitors would look forward with eagerness to the show circuit each year. After all, it is the livestock and agricultural exhibits which make our fairs worth while. The horse races, the merry-go-round, and

so on are merely incidents and should take second place. It is the educational rather than the amusement feature of our agricultural shows which must be encouraged.

The livestock show at Fresno was up to standard in some departments and below in others. The Holstein division missed the Morris herd, but with Bridgford, Gibson, Minor and Thornton, Buena Alta herds and others on deck there were probably 30 more Holsteins entered than in 1916.

Ayrshires, Dutch Belted, and Red Polled cattle were absent this year, but Beef Shorthorns and Milking Shorthorns made the best exhibit in the history of the fair.

J. Bidegaray exhibited his usual flock of fine Merino and Hampshire sheep. Mr. Bidegaray sends a bunch to the fair every year, more to help make the sheep division measure up

# POWER

## TO SPARE

One of the chief reasons the MOLINE-UNIVERSAL tractor has become the "favorite" with the farmers is because it has *power to spare*. It is possible to give it more than it will pull, but not possible to stall its drive-wheels. This PROVES it has plenty of power. You know that the motor is the "heart" of any tractor—that's why we have built into the

### MOLINE <sup>ORIGINAL</sup> <sup>2</sup> <sup>WHEEL</sup> UNIVERSAL TRACTOR

the most powerful and dependable motor that money, factory equipment and skill could devise. Our reputation is too sacred to put out a tractor which is not right. So, to be doubly sure, we built the motor in the MOLINE-UNIVERSAL with POWER TO SPARE.

"My MOLINE-UNIVERSAL TRACTOR is so handy for all kinds of work. I cut all my oats with it and did all my fall plowing—more than 100 acres. The ground was so hard and dry it would have been nearly impossible to plow with horses. I have had no expense on the tractor."

A. J. ANDERSON, Harcourt, Iowa

Every part of the Moline-Universal is built extra strong. It weighs nearly a ton less than others. This means much lower operating cost. ALL ITS WEIGHT IS TRACTION WEIGHT. Remember, you can not only plow with this tractor but plant—cultivate—harrow—disc—mow—harvest—do all farm work. Write for free catalog-folder—it will interest you.

## More About Citrus Canker

With Photos Taken by Avery S. Hoyt

**A**FTER Avery S. Hoyt's article on citrus canker as it exists in Florida was published in last week's Cultivator a more complete article was received from him. From this additional matter we make extracts below. The photographs used are far more convincing than words of the awfulness of this dread disease and the disaster to California should it gain entrance to our groves. Mr. Hoyt writes:

No cure or control has yet been found for citrus canker. Before adopting the final expedient of destruction of infected trees many experiments were made in the effort to devise some means by which this disease could be eradicated or controlled short of actual destruction. The results of these trials all pointed definitely to one conclusion and the prompt destruction of infected trees was adopted. A great many growers having reason to believe that portions of their groves had been exposed to infection have voluntarily destroyed or authorized the destruction of such trees in the hope of saving the remainder. Some growers have gone so far as to issue permanent authority to their district inspectors to burn the four or eight trees immediately surrounding every infected tree found in their groves. The choice as to whether four or eight trees shall be burned in such cases is left to the district inspector who decides this question after a thorough investigation of the conditions. The burning of infected trees is done with extreme care to prevent spreading the disease during the very process of destroying it. The ground under and surrounding the tree is first sprayed with a solution of formaldehyde. A kerosene torch is used in burning, with which the tree is defoliated and the trunk and branches are thoroughly blackened with the flame. The tree is then cut down, the roots carefully grubbed out and with the blackened top piled on the spot and burned. Thorough disinfection of the soil with formaldehyde follows at once, great care being taken to allow the disinfectant to penetrate as far as possible into the ground.

The inspectors on the canker eradication forces of Florida are required to observe the most rigid precau-

Immediately upon the discovery of citrus canker in a grove a quarantine is established covering all citrus within a mile in all directions from the boundaries of the infected grove. The planting or movement of citrus trees or budwood within this prescribed territory is prohibited. The necessity for this requirement is clearly stated in a report by State Plant Commissioner Wilmon Newell a part of

Inspecting for Citrus Canker

Owing to the great size of these trees it is sometimes necessary to use 26 foot ladders to reach an elevation sufficient with the aid of field glasses to view the tops.

which follows: "There have been 63 instances in which canker has appeared for the first time in a new locality. In each and every one of these cases the disease first appeared upon citrus trees shipped by citrus nurseries prior to the adoption of Rule 5." (Rule 5 provides legal authority for the quarantines maintained about infected properties.) "In 56 of these cases the trees which developed the canker came from nurseries in which no infectious has been found

Soil Disinfection

After removal of infected tree a solution of formaldehyde is sprayed over the surface of the ground and then thoroughly worked in to give deepest possible penetration. The top and roots of an infected tree piled ready for burning are seen. (All engravings of citrus canker from original photographs taken by Avery S. Hoyt).

tions to prevent the possibility of their spreading the disease. Special one-piece inspection spits designed to completely cover the clothing, with leggings, high shoes and special hats are worn at all times in citrus properties. These articles are disinfected by submerging in disinfecting solution and the hands, arms, necks and faces of the inspectors are carefully sponged with disinfectant. This disinfection is practiced without fail both upon entering and leaving all groves under inspection. This means that if one enters five different citrus groves in a single day he must disinfect ten times and five times as he enters the groves it is with wet clothing. Laborers employed in infected groves must follow these same requirements which are not without a noticeable effect on labor conditions.

up to dates of shipment. This proves that citrus trees can carry the disease although they do not show infection and although the nursery from which they come does not show infection."

### OLIVE INSECTS

"The Olive Insects of California" by E. O. Essig, is being mailed by the experiment station of the college of agriculture at Berkeley to all who request it. The bulletin touches upon the more important olive insects of California, the first of course being the black and other scales and twig borers; it also discusses insects of minor importance, with general and detail engravings of many of the pests.

# avocados Recommended for Planting

COMMITTEE on classification and registration was appointed by the California Avocado Association to collect and publish data as to of the many varieties of avocado best to plant under California ons. From the committee's re-e quote:  
 list includes only varieties of called thick-skinned or Guate-type, which in general it is be- is the best and most reliable or commercial planting. The ttee does not believe that it is e at the present time with our knowledge and experience, to t to pass on the relative com- importance of the different of fruits. Only time can de- what the market demands. The fact remains, however, the present time, a large ma- of the experienced growers in- nia favor the use of the Guate- type.  
 y varieties that are frequently ned in discussions are not in-

The percentages of oil or fat given under each variety are taken from analyses made by Professor M. E. Jaffa of the University of California, except in the case of the Spinks, which is from an analysis made by E. M. Chace of the United States department of agriculture. These are not averages, but the highest percentages found in any single analysis of a variety. The percentage of fat increases as the fruit matures and in view of the few analyses that have been made of any one variety, it is thought to be more instructive at present to give the highest analysis rather than an average.  
 The other descriptive information relative to the varieties listed is self-explanatory, but it must be remembered in using the list, that there are many variations and extremes that cannot be given in a condensed table.  
 Avocado orchards require several years to reach full bearing age and size, and it is somewhat common practice to plant the orchard more thickly than is ultimately desired, using some

Burning Infected Grapefruit Tree  
 kerosene torch is used with which the tree is defoliated and the trunk and es blackened with the flame.

In this list. The list must be merely as the best judgment of mmittee, at the present time, of eties safest to recommend for ug. The placing of a y in a definite season merely tes its usual season of maturing t may be expected to be at its Varieties may extend from one n to another, and when in the ent of the committee, a variety be considered as important in seasons, it is listed under both. is happens that several varieties sted twice.

regularly devised system providing for the removal of a certain number of the trees. The trees that are intended to be removed are ordinarily spoken of as filler trees. Special attention is directed to the value of the Lyon for use as a "filler" tree in planting. Its upright habit of growth and early fruiting render it particularly valuable for such use.

## Rootstocks

So much injury may be done by the use of tender or poor rootstocks in the propagation of the avocado that the committee would strongly recommend that only seedlings of the hardy Mexican avocado be used for budding and grafting stocks. Nurserymen should use this type of rootstock only for trees propagated for sale, and planters should demand that the trees purchased for planting should be of this stock. Seedlings of the ordinary varieties of the avocado grown in Florida, the West Indies, Hawaii and Tahiti, are usually so tender that they cannot withstand the cold of California winters and are thus unsafe for use as stocks. Seedlings of the Guatemalan type are not such strong growers as the Mexican and are probably not so good to use as stocks, though they have not been thoroughly tested. Committee, H. J. Webber, chairman, C. D. Adams, I. J. Condit, William

# Cleveland Tractor

Geared to the Ground

## Now You Can Forget The Labor Shortage

—and the lack of horses and mules as well.

A single Cleveland Tractor will do the work of three 3-mule teams and their drivers—and do it quicker, better and at much lower cost.

Under the very conditions found in the South and in the fruit lands of the West the Cleveland will plow 3½ miles an hour. Such speed used to be considered impractical. The Cleveland has made it not only possible but highly desirable. At such speed it does the prettiest job of plowing you ever saw.

It will plow 8 to 10 acres a day, through loose sand, soft gumbo, flint laden cotton soil or soggy rice fields.

Think of such speed! Think of the labor saved. To say nothing of the saving in time and money.

No other tractor built can perform so successfully under the conditions you have to face.

The Cleveland will not pack the soil. Nor will it slip, mire or flounder. For it is light—only 2750 pounds—and has 600 square inches of continuous traction surface.

All this means more cotton, rice, sugar—greater prosperity for Cleveland Tractor owners.

And here's another most important point. The Cleveland is only 52 inches high and 50 inches wide—actually small enough for use among small fruit trees. It is just what hundreds of grove owners have been looking for.

Even in the forests it can perform to advantage, threading in and out between trees, and hauling heavy logs as neither horses nor mules can do.

The Cleveland delivers 12 h.p. at the drawbar and 20 at the pulley belt—more than enough for all your requirements.

It is built by Rollin H. White, the famous motor truck engineer. Throughout its construction he has used only the finest motor truck parts. He has protected all gears by enclosing them in dirtproof, dustproof cases. He has so designed the Cleveland that it steers by the power of its engine. Any-one can drive it and care for it.

These are big important advantages. There are others just as vital. They combine to make the Cleveland just the tractor needed to solve the labor problem of the South.

You need the Cleveland and need it badly. Send today for full particulars and name of the nearest Cleveland dealer. We are so crowded with orders that we cannot promise delivery before December 1. We suggest ordering now for delivery then. Do not delay in getting full information. Address Dept. BF, or use the coupon.

## State Fruit Growers Convention

**S**TATE Horticultural Commissioner George H. Hecke announces arrangements practically completed for the "Fiftieth" State Fruit Growers' Convention which will be held in Sacramento November 21-23, or rather, it will convene as a state convention of horticultural commissioners on Monday morning, November 19, when two days will be given to discussion of horticultural matters, especially those touching upon police regulation of movement of plants and fruits from one section to another.

The first day will be given over to discussion of questions of the year or the problems which have confronted various county horticultural commissioners. State Commissioner Hecke will have charge of these meetings. There will also be present representatives of the United States department of agriculture and of the United States biological survey. Specialists of the survey will give information regarding squirrel control. Representatives of the state government having to do with state lands are invited to be present and it is hoped a method will be devised through which control of pests on such lands may be secured.

Standardization will take up the second day of the horticultural commissioners' convention. There are many problems as to maturity standardization of our fruits, especially of citrus fruits, in which there is as yet no decision as to "color line," "eight to one."

#### State Convention Proper

The state convention of fruit growers opens on Wednesday morning, the 21st. There will be the usual opening welcome, report of the commission and reports from various fruit growers' and shippers' associations. In

the afternoon there will be discussion of the matter of production of fruits, led by Dr. H. J. Webber. C. B. Lipman will discuss soils, especially as affected by cover crops. day's session leads up to the session which will be a standing meeting by Eastern specialists presumably those who have had with the selling of California products and who can give information the attitude of the Eastern market. Standardization of deciduous and citrus fruits both will be discussed.

On the 22nd State Market Director Weinstock and associations affiliated with him in his work will have place on the program during the forenoon session. A ride to County will take the place of the forenoon session. Commissioner Hecke fruit ranch is in that county and is probable that an opportunity will be given to inspect his methods of culture. Features of the day will be tractor demonstrations and speeches by students of the university farm. Davis to give fruit growers an opportunity to judge of the type of educational work being done by the university. These will all be on agricultural subjects and by students of agricultural courses.

Friday the 23rd will be given discussion of the labor situation affects producers of California. Wisker will preside at the morning session and C. C. Teague at the noon session.

The session of Saturday, November 24, will be an executive session of county horticultural commissioners.

H. S. Maddox, secretary of the Sacramento chamber of commerce, have charge of local entertainment and presumably every visiting grower will be cared for.

## Government to Purchase Nitrates for Fertilizers

**T**HE department of agriculture authorizes the following:

Secretary Houston stated that the department of agriculture has for some time been giving careful consideration to the problem of securing nitrate of soda for fertilizer use. Under a recent authorization of congress there is available an appropriation of \$10,000,000 to be used, at the discretion of the president, to secure nitrate of soda and to supply it to farmers at cost for cash.

It is proposed to coordinate all government purchases of Chilean nitrate for this country through the purchasing committee of the war industries board, so that there will be no competitive bidding for this material. This should very much simplify the problem and make it feasible to secure the best possible terms. The price of Chilean nitrate on board ship in Chile has greatly increased within recent months without justification. Shipping rates also have increased.

#### Cause of Increased Prices.

The increase in price is due in part to unfounded statements regarding the demand for Chilean nitrate for munitions purposes and for fertilizer. As a matter of fact, the demands of this country for nitrate of soda will be smaller than heretofore. The navy already has placed contracts to satisfy its needs for the next 12 months. The war department announces that practically all the sodium nitrate which it has been planned to procure from the gradual building up of the war reserve already has been contracted for. The quantity which may be purchased for fertilizer use under the special appropriation of congress will not be an addition to the quantity normally used.

#### Demand May Decrease.

Any quantity purchased by the gov-

ernment and sold to the farmer simply take the place in part of quantities heretofore supplied to through private agencies. As a matter of fact, unless satisfactory can be secured, it is probable the farmers will not seek as large quantity of this material as has been used in the last year or two. contracts have been made already for farmers for nitrate of soda. In view of all these facts, it is probable the aggregate demand for the five or six months will be below normal. It is certain that unless market prices, which are now in the neighborhood of \$100 a ton, fall, farmers' demand for nitrate of soda will decrease.

As has been stated, the purchase will be handled directly through the war industries board. The department of agriculture will cooperate with the purchasing committee in effort to procure nitrate of soda as is authorized by law to secure as to the demand for fertilizer, including nitrate of soda, their consumption, costs, and prices, the basic facts, relating to their production, transportation, manufacture, storage, and distribution. This inquiry is now being conducted through the bureau of markets. In connection with this the needs of farmers will be ascertained, and amounts purchased for their use. After the shipments reach the ports, they will be taken charge of by the department and will be distributed to farmers at cost for cash. The collections will be turned into the treasury.

#### May License Distribution.

Authority has been given the president, if necessary, to license the transportation, manufacture, storage and distribution of fertilizers, to require the licensees to submit reports to permit entry and inspection of their places of business. The

is further authorized, if he shall that any storage charge, commis- profits, or practice of any li- is unjust or unreasonable or iminatory and unfair, to cause to be discontinued, and in lieu ach may determine what is just reasonable, and his finding shall rima facie evidence in any court hich proceedings may be brought. also provided that licenses may evoked for cause. If it becomes ssary to exercise the licensing r, the department of agriculture, igh a special agency, will utilize services of the licensing division e food administration. ere has been available no thor- ly satisfactory data as to the is of crops due solely to the ap- tion of nitrate of soda, and, efore, as to the price at which ers can afford to use it. Realiz- this fact, the secretary of agricul- directed the bureau of plant in- ry last spring to make 100 experi- ts. These experiments are being e with corn in five Southern s — Virginia, North Carolina, h Carolina, Georgia and Alabama ten counties in each state and on farms in each county. It is hop- at the results of the investigation be available within the next six s. When information is secured ill promptly be given publicly.

#### RED SPIDER EXPERIENCE

Written for California Cultivator  
By W. S. Guilford

**I** WOULD suggest that now is a good time to discuss the red spider problem — and am sure the columns of the Cultivator are open for such discussion.

My experience in several Glenn county prune orchards this year seems to indicate that the best thing to do for spider control next year is to spray trees thoroughly with atomic sulphur early in the season before any spider has made its appearance.

When the spider does appear it is generally found to be almost impossible to entirely check it. After a season of spraying the trees four, or perhaps eight times it is possible to keep the trees from being defoliated — and that is about all.

In many orchards a considerable quantity of the fruit has been affected. Where the trees have been defoliated the spider the prunes have not "sugared up" and are a sort of "pit, pulp skin" affair without much sugar content.

Unless they are cured very dry on trays there is danger of molding. Prunes cannot be put in the bins with much moisture in them as the prunes that have developed on trees damaged by the spider.

We have tried atomic sulphur and various combinations in our orchards. Mr. John in Glenn County. We did not get the work started as early as we will next year. At first we were disappointed with the results from atomic sulphur, but after careful study the season will rely entirely on atomic sulphur next year.

There has been plenty of spider experience this year. Let us hear from others.

#### FARM BUREAUS

In a score of counties active work on the formation of farm "Centers" is under way. A county bureau is under way "order way" in time of war when farmers' duty is so great means the slightest suggestion looking toward greater efficiency is a command to service. As a rule every farmer stands at attention until the demand comes.

The university formerly waited until the farmers requested the adviser in their county. Now, however, Commander Hoover recommends immediate action in every county. So the university has appointed a number of staff to act in the 20 or more counties which have no farm adviser and agricultural counties. An outline of the work and statement as to need was given in Dr. Hunt's address, a portion of which was given in the Cultivator of September 29.

At Los Angeles, the county council defense called a meeting last Saturday. Every section of the county was represented. The necessity for immediate action was appreciated, the enthusiasm marked and a definite

step toward permanent organization taken in the election of Senator P. F. Cogswell president; Volney H. Craig first vice-president, C. A. Griffith second vice-president, W. S. Rosecrans secretary, and Ralph McNees treasurer of the temporary organizing body.

Evidence of the interest was shown in the jingle of the dollars as they rained on the treasurer's table.

The work of these temporary officers, who also constitute an executive committee, will be to organize some 20 or 25 sections, each of like products so far as possible, into local centers. These in turn to elect delegates to perfect a permanent farm bureau.

#### HORTICULTURAL STATUTES

State Commissioner of Horticulture G. H. Hecke has just received from the state printer 5000 copies of the revised horticultural statutes which are now ready for distribution. This little book of 150 pages contains all the horticultural laws and quarantine orders now in force, the state insecticide and fungicide laws, and a complete list of the horticultural commissioners and inspectors now operating throughout the state. Anyone desiring a copy should make application to the State Horticultural Commissioner, Sacramento.

## PACIFIC REDWOOD PIPE

embodies these advantages:—

It has 20% greater carrying capacity than either riveted steel or cast-iron pipe, costs much less and lasts at least as long as the latter and several times as long as the former.

Redwood is immune to the attacks of insects, acids and alkalies.

It is not affected by heat or cold. Arid or humid climates do not reduce its life.

Here we have long life, continuous service, complete satisfaction, and at a cost so low that none should lay any other than Pacific Redwood Pipe.

Our engineers will be glad to give you an estimate of the cost of the pipe you should have, if you'll tell us the conditions creating your needs.

## Autumn in the Garden

Written for California Cultivator by Ernest Braunton

**N**OW is a splendid time to put in lawns or renovate old ones. The ground should first be graded and the fact kept in view that the surface can never be more smooth and even than it is when you get through with grading.

The soil must be well pulverized and most thoroughly soaked. If light and sandy it will pay to haul in some adobe or heavy soil to put on surface. No soil grows better grass than adobe. If soil is very light it would be better not to use blue grass or clover, but to depend upon lippia or some other soil cover. Good stable manure is the best material one can put in the soil for fertilizer and do not let anyone deter you from using it if available. If you don't have it use commercial lawn fertilizer at the rate of 50 pounds to 1000 square feet. A heavy raking to mix this with the top soil should be sufficient. The amount of seed needed is not less than six pounds to 1000 square feet. Some use

one-third clover and two-thirds blue grass and this makes a fine combination. The two should be sown separately as one is heavy and the other very light. Sow both very evenly over the whole surface.

After sowing rake the soil over lightly to cover the seeds. Better rake it twice, the second time crosswise to the first, but do not pull the soil about so that any of the seed is deeply covered or any moved about after sowing evenly. If possible roll the surface after sowing. Then water with a fine spray until thoroughly wetted and afterward gently spray the surface at any time of day the least dryness shows and keep this up until the grass is in evidence. Get good seed; do not hunt for a place where it is sold at a lesser price than elsewhere. As a rule you will get what you pay for.

### Oxalis for Borders

Oxalis, cowslips, Bermuda butter-

cups, or whatever you choose to call them, were not given in our bulb list for I could never warm to them. They do not furnish cut flowers as the stems are too short, and the colors of many species and varieties are poor, especially the pinks that have a tinge of blue in them. For a low border or edging plant or for carpet or ground-cover effects they are very good. The foliage is good, the flowers of fair size and in the better types the flowers are bright little blossoms. They are of easy culture and usually multiply rapidly. They may be had in white, yellow, pink, rose, and crimson; also a magenta.

### Giant English Daisies

Have you seen the new giant strain of English daisies, or *Bellis perennis*? If you have not I can assure that the increase in size of flowers in this daisy has been greater than that attained with any other flower in the last decade. If in good soil and kept damp they are really wonders. It pays to feed and water them well for I notice that if given poor soil and care they do not attain fine size. As a border plant or for flat bedding they

can hardly fail to please. seeds or plants may be had for colors of flowers, white, and pink.

### Wallflowers Becoming Popular

Wallflowers thrive best in weather and therefore seeds or should be put in the soil now. are "deucedly English," you know, and the old-fashioned English seldom thrive in California, at not in the southern half of the state. But we have American strains that do not need the cool damp mate of England to bring them perfect flowers, and these strains will please Californians. winter I saw as good flowers, large heads, as I ever saw in England or elsewhere. The flowers have lightful fragrance and the color rather unusual in gardens, the reds and browns, as well as the lows tinged with brown, being attractive. Plant in cool spot.

### Sweet William

William was very sweet indeed in early spring in my garden. was furnishing an abundance of flowers in a great variety of colors at a time when flowers were scarce. colors, shades, and combinations. colors were too many to describe. range was from pure white to crimson and for the first time pure pink ones though the flowers were not so large nor the plants robust as in the other shades. colors. But the color was fine and a departure from the usual color to be very pleasing. Sweet William are hardy subjects and do well in nearly any soil and any location.

### Plant Verbenas Now

Verbenas are splendid bedding plants. one may get strong vivid colors will brighten any garden or landscape. The range of color too is great. there are none better than the verbenas. Some very fine effects may be obtained with mixed colors, for though they come in great variety it is seldom a jarring or conflicting shade appears and even so the offender may be plucked from thence and cast into the uttermost depths of the trash can. After one has a small stock of verbenas he may propagate from cuttings the colors he admires and the others away. They grow so fast from cuttings that a small child soon increase the stock to enough to fill a garden.

## The Onion Situation in California

By R. G. Risser, Assistant Truck Specialist for the Pacific Coast

**D**ETERMINATION of the quantity of onions yet on the market from the principal onion district in California has been the object of a special trip of investigation following reports of a short crop. East the recent movement of onions has been much greater than prior to September 1 and has been limited only by inadequate transportation facilities, especially the lack of cars. The total quantity of onions moved from the river landings on September 15 was 1165 cars, probably 200 cars of this number ready in the warehouses awaiting shipment.

Of the original area in the state of 8300 acres, 200 acres in the Costa County was abandoned, leaving 8100 acres to be harvested. Of this acreage it is estimated that 1000 acres are grown under contract. The bulbs produced from this portion

*This is Styleplus Week*

Styleplus Clothes \$17

Styleplus Clothes \$21

The same prices the nation over.

*The Big Buy*

Always the greatest value at the price

Styleplus Clothes \$17 (black label) always excel at that price  
Styleplus Clothes \$21 (green label) always excel at that price

Progressive merchants from coast to coast are this week featuring Styleplus suits and overcoats—the only clothes in America sold on a known price basis—all wool and guaranteed.

This policy has made a hit with the men of America. It means that whenever and wherever they buy Styleplus, they know the quality and the price.

We developed the known price idea in clothing. It enables us to concentrate our volume, lower our costs, give exceptional all-wool fabrics, style and tailoring at moderate price.

For three years we have maintained Styleplus Clothes \$17 in the face of war conditions, because we could buy in advance and operate on an increasingly larger scale.

When the United States entered the war, the fabric market underwent violent changes. To

meet these new conditions we added a \$21 grade, thus insuring the wide selection of fabrics and models and enabling Styleplus Clothes to meet every individual demand as usual.

Each grade the greatest possible value at the price. See for yourself at the Styleplus store. Write us (Dept. AB) for free copy of "The Styleplus Book."

Style plus all-wool fabrics + perfect fit  
+ expert workmanship + guaranteed wear.

**Men With Rigs or Autos**  
Make \$100 to \$300 Per Month

Our trial delivery plan makes it easy. No previous experience necessary. Practically every farm home and small town home will buy after trying. One farmer who had never sold anything in his life before writes: "I sold 51 the first seven days." Christensen, Wis., says: "I have never seen an article that sells so easily." Norring, Ia., says: "82% of homes visited bought." Phillips, O., says: "Every customer becomes a friend and booster." Kemmerling, Minn., says: "No flowery talk necessary. Sell itself." Thousands who are coining money endorse the ALADDIN just as strongly. NO MONEY REQUIRED. We furnish stock to get started. Sample sent prepaid for 10 days' free trial and given absolutely without cost when you become a distributor. Ask for our distributor's plan. State occupation, age, whether you have rig or auto; whether you can work spare time or steady; when can start; townships most convenient for you to work in.

rop are intended primarily for  
ng in December 1917 for seed  
ction during the year 1918, and  
ertain that at least a portion  
product of this acreage will be  
for that purpose. But it is al-  
known that part of these onions  
be put on the market, and it is  
le that seedmen may buy up  
than they have grown, or, if  
are high, they may do as they  
st fall, sell some of the bulbs  
arket which were grown espec-  
to be planted for seed product.  
It was reported to the bureau  
here would probably be nearly  
cars of onions used for seed  
ng next year, and this investi-  
followed, but it has failed to  
that the quantity to be used for  
urpose will be equal to the es-  
Contracts for growing seed  
not yet been signed, hence it is  
sible to say definitely, at this  
what quantity will be used. It  
stomary to use from 30 to 70  
per acre, depending upon va-  
and size, 50 sacks being the  
ge. At this rate 4000 cars would  
24,000 acres for seed. Normally  
creage of seed onions in the en-  
tate does not exceed 4500 acres,  
here is no likelihood that such  
crease in acreage is possible for  
year. Seedsmen would like to  
a larger acreage, and if they  
the entire product of the 1700  
yielding 200 sacks per acre  
could plant 6800 acres which  
not be too much under present  
ions. But the seed growers  
had a poor crop and the cost of  
ction has been very high. Un-  
circumstances they are badly  
traged and seedmen will have  
difficulty in signing up the  
ge they desire to grow on terms  
actory to both parties. The  
ion is so serious that it is prob-  
that not over 5000 acres will be  
ed, and this will require 833  
of bulbs for planting.

onions are a little smaller than  
and smut has developed in  
of the bulbs, but the product is  
ally good. The yield is running  
acks per acre averaging 105  
s each.  
ecapitulation follows: 8100 acres  
ions (total crop) averaging 200  
per acre, 1,620,000 sacks, or  
cars. Shipped up to September  
on river landings, 1165 cars. Re-  
ng in fields and on river land-  
4235 cars. Estimated quantity  
planted for seed growing 835  
Balance 3400 cars.  
s impossible to tell what portion  
s balance has been sold, but not  
red. Storage space has all been  
ed and it is probable that a  
quantity will be held over.

#### ICATION OF HILGARD HALL

ornia Nurserymen, room 125.  
ere will be an exhibit of citrus  
semi-tropical fruits in room 215  
of new plant creations in room  
these exhibits both open from  
5.

## WE BUILT THIS CAR FOR YOU

**W**E take it that the  
average American  
buys his motor car to use  
—for himself and his family  
to enjoy, at a cost within  
reason.

We have built this new  
Oakland Sensible Six to this  
idea, and we believe it more  
faithfully expresses it than  
any other car on the market.

It is not a racing car, in  
the sense that comfort is  
sacrificed to speed, nor is  
it a show car, in the sense  
that efficiency is sacrificed  
to size.

It is simply a very well-  
made, competent and com-  
fortable automobile—a  
*sensible* car.

The overhead-valve motor  
in this new Oakland is sim-

ple and compact; it delivers  
at 2600 r. p. m., 44 horse-  
power, or one full working  
horsepower for every 48  
pounds of car weight.

It is exceedingly econom-  
ical of fuel, and in relation  
to the weight of the car is  
perhaps the strongest in  
the world.

The body of the car is  
very roomy and of excep-  
tionally solid construction;  
it is swung on specially  
graded springs of great  
comfort, and is upholstered  
in genuine leather.

We know that the pres-  
ent market cannot equal  
Oakland value except at a  
considerable advance in  
cost.

Oakland Motor Car Company  
PONTIAC, MICH.

 days from date of the transaction, and  
 the subscriber must have mentioned the  
 Cultivator when writing the advertiser.

**THIS WEEK'S COVER**

Walnut harvesting is nearly  
 over. It has been one of the greatest  
 of walnut harvests, especially from a  
 financial standpoint, for never in the  
 history of the industry have such  
 prices been obtained as this year. It  
 is probable the output will be around  
 12,000 tons; it would have been much  
 greater had it not been for the heat  
 of mid-June. Walnut planting will be  
 general this year, for the industry  
 needs encouragement. This country  
 imports more nuts than it grows, but  
 California's increase in walnuts and  
 almonds is reducing this excess of im-  
 ports every year.

**EAT SPUDS**

After sending out many appeals  
 for conservation now comes the de-  
 partment of agriculture with, "Make  
 special effort to eat potatoes October  
 22-27 inclusive." Presumably this is  
 meant as a measure to conserve ce-  
 reals, and as potatoes are more easily  
 and quickly grown than wheat and as  
 nothing on earth is much better than  
 a mealy baked potato, let us all ob-  
 serve potato week.

**BORROWER'S BULLETIN**

There is soon to be issued from  
 the federal farm loan bureau at  
 Washington a "house organ," "The  
 Borrowers' Bulletin." It will contain  
 a great deal of advice and information  
 which will be of interest to borrow-  
 ers and possible borrowers under the  
 federal farm loan system. Informa-  
 tion regarding this bulletin may be se-  
 cured by writing Federal Farm Loan  
 Board, Treasury Department, Wash-  
 ington, D. C.

**F. K. ADAMS**

One of California's busy work-  
 ers, for years identified with the cit-  
 rus industry, manager of two of the  
 largest packing houses in the state,  
 died last week. F. K. Adams, manager  
 of the packing house at West Ontario  
 commonly known as the Narod pack-  
 ing house, busy with work connected  
 with the association and filled with  
 thoughts of how to render best serv-  
 ice to the growers, in his absorption  
 stepped in front of an Overland ex-  
 press and was instantly killed. The  
 community suffers a great loss in his  
 passing.

**DOING; NOT ADVISING**

We have referred to the farmer  
 becoming tired of receiving such a  
 continuous stream of advice as he has  
 for the past eight months. New York  
 farmers, however, are taking advice  
 with more grace because of its being  
 sugar-coated with some practical do-  
 ing on the part of the state adminis-  
 tration. The state council of defense  
 has given, so far as it could, advice.  
 Better, it has secured the purchase of  
 40 medium type tractors. These have  
 been distributed in various parts of  
 the state (through the county agents)  
 where they are taking the place of  
 many of the horses which have been  
 drawn away to Europe.

Give us more practical capitalizing  
 of farm operations if highest efficiency  
 and production is desired.

**MORE EQUIPMENT**

When "twenty a month and  
 found" was the price for most efficient  
 farm labor, the old wheelbarrow to  
 handle farm wastes, cultivators or oth-  
 er implements in indifferent condition,  
 dull axes and other tools were mat-  
 ters of little importance, but today  
 when it is far nearer twenty per day  
 than per month the farmer who  
 would succeed is inspecting every la-  
 bor saving appliance.

The twenty per day is not an exag-  
 geration to make a point, but a fact,  
 if not on the farm; many a factory in  
 the East is paying more than \$20 per  
 day for some of its help—not of great-  
 est efficiency either. But on the farm  
 \$50 or \$60 and found is not unknown  
 in many communities.

True, farming with most up-to-date  
 implements, tools and power calls for  
 large investment, but we believe that  
 more than ever it is a necessity if  
 farming products are to be a factor in  
 these strenuous days.

**LIBERTY LOAN**

It has been said that when the  
 United States has invested as much in  
 the present war as has Germany, in  
 proportion to the wealth of the coun-  
 tries, her bonded indebtedness will  
 exceed \$200,000,000,000. This makes  
 the little \$2,000,000,000 and the \$3,000,-  
 000,000 now asked for seem a mere  
 bagatelle.

The United States will never be  
 called upon to make such great in-  
 vestment, but were it necessary the  
 people would not be found wanting.  
 The first liberty loan was oversub-  
 scribed by 50 per cent. We believe  
 that before the present drive ends it  
 will also be greatly oversubscribed,  
 but the desire of the administration  
 and of the people of the entire coun-  
 try is to make it as universal as pos-  
 sible. As has been said, "Unless we  
 come across, the Kaiser will."

Are you saving your money to in-  
 vest in the second issue of the liberty  
 loan?

**SALVAGE**

The Red Cross is making appeal  
 for salvaging everything of value, and  
 we are all finding that there is much  
 of value that the American people  
 have been wasting. Now even the old  
 newspapers, tinfoil about our chewing  
 gum, old shoes, junk of all kinds, are  
 aiding in the preservation of democ-  
 racy. When Gerard spoke to enthus-  
 iastic crowds in San Francisco regard-  
 ing the second liberty loan the admis-  
 sion charged was an old pair of shoes.  
 These are to be repaired and sent to  
 the needy of France and Belgium.

Now comes the geological survey,  
 reporting on the iron mines of the  
 country, stating that they are all pro-  
 ducing to full capacity, then calling  
 attention to the scrap metal rusting  
 away on farms of the country.

In the Northeastern states scrap  
 metals have long been more or less  
 fully taken care of, mainly by the ubi-  
 quitous junk man, and along most rail-  
 ways and about most industrial plants  
 they are now salvaged systematically.  
 However, in the greater part of the  
 United States little attention is given  
 to saving the old metal scattered  
 about the industrial plants of the farm-  
 ers, where abandoned binders, plows,  
 mowers, rakes, etc., decorate the fence  
 corners and roadsides, and discarded  
 stoves, pumps, pipe, and small uten-  
 sils rust about the barns and sheds.  
 A considerable part of this junk is al-  
 ready on wheels with tongue and  
 whiffletree attached, ready in fact to  
 be "walked on its own legs" to the  
 freight station.

Junk now has real value. Gather it  
 and turn it over to the Red Cross or  
 get it into use in foundry or shed in  
 some way.

**EXEMPTIONS**

Since Cain killed Abel and since  
 David showed his skill with the sling  
 war methods have materially chang-  
 ed, and today the fighting man at the  
 front requires from six to a dozen of  
 us at home to keep him supplied with  
 food and munitions of war. Europe  
 is now proving that the labor and the  
 sacrifices of those at home are  
 amongst the greatest factors of suc-  
 cess. The United States is profiting  
 by Europe's lesson and has determin-  
 ed to interfere as little as possible  
 with activities essential to the suc-  
 cess of the men selected to go to the  
 trenches.

But no law or system can be car-  
 ried out without some mistakes or in-  
 justices. As the liberty boys march  
 away to Camp Kearny or Camp Lew-  
 is, or possibly to the Eastern canton-  
 ments many a farm or shop which is  
 active in producing things needed at  
 this time is left without proper help-  
 ers.

We believe this is felt to a greater  
 extent on the farm than in any shop  
 or office. "Any chump can farm" is  
 the belief of too many, but in reality  
 there are few callings which require  
 more experienced or efficient help.  
 Especially is this the case in irrigated  
 farming. Imperial Valley, for ex-  
 ample, where many of the helpers are  
 aliens, particularly because of its  
 nearness to the Mexican line and be-  
 cause it has proved attractive to  
 thousands of Asiatics, now finds it-  
 self required to send almost every  
 available American citizen of draft  
 age to fill its quota. In fact, in all  
 California this is more largely true than  
 in Eastern farming sections, and Cal-  
 ifornia's food output will be materially  
 lessened unless this labor need is sup-  
 plied.

An entire day is to be given to dis-  
 cussion of these questions at the com-  
 ing fruit growers convention at Sac-  
 ramento. It is to be hoped that some  
 clean cut statement of California  
 conditions will be made which will  
 prove of value to exemption boards.

**Agricultural News News**

There is an 18,000 acre potato  
 at Starks, Wisconsin.

The National Canners' Assoc-  
 will hold its next annual conven-  
 Boston in February.

 It has been shown that the cele-  
 keep in perfect condition for  
 months at least.

In answer to many rumors  
 there will be a suspension of  
 tion of the grain standards act  
 the war, the department of a-  
 ture has announced that the  
 ards will be enforced.

Wholesale fish distributors fr-  
 parts of the country have been  
 ference with the food commis-  
 Washington, to lay plans to p-  
 the sale of fish in order to sav-  
 for shipment to our Allies.

Special licenses will not be re-  
 for shipment of raw cotton to  
 Britian, France, Italy, Japan, Ru-  
 any of their colonies. This pr-  
 is result of a special order of  
 ports Administration Board.

The "Pink Bollworm" bill has  
 signed by the governor of Texa-  
 bill creates a zone embracing  
 ties along the Rio Grande, in-  
 production of cotton is prohibi-  
 bill is designed to exterminate  
 pink bollworm.

The war has had no apparen-  
 on imports of silks, raw silks  
 in for manufacture the pas-  
 amounting to \$156,000,000  
 \$119,000,000 last year which  
 record. The United States is  
 greatest silk manufacturer  
 world.

Careful plans have been m-  
 prevent waste of garbage in the  
 army cantonments establish-  
 different parts of the country.  
 been found that the garbage  
 food served to ten to 15 men w-  
 one hog. Bones and other wa-  
 be turned into fertilizer.

Bean growers and dealers fr-  
 fornia, Colorado, Michigan an-  
 bean growing states recently  
 conference with Food Admin-  
 Hoover in Washington when  
 nounced that the food admin-  
 would not fix a price on beans  
 speculation, and forced high  
 made it necessary.

 that in lots of one pound or  
 agricultural seed offered for  
 the state must be accompan-  
 statement giving name of seed  
 and address of person offerin-  
 sale, approximate percent  
 weight of purity and approxi-  
 centage of germination.

A rumor has been widely  
 throughout the country that  
 ed States government is plan-  
 take from every family all  
 goods in excess of 100 quarts.  
 sections it has been stated  
 excess of fruit is to be taken  
 the country entirely and ship-  
 England. So persistent wer-  
 rumors that the department  
 culture has thought it wise to  
 a statement declaring it an  
 falsehood.

# Agricultural News Notes of the Pacific Coast

## Northern California

Winters, Yolo County, reports harvesting a big crop of peaches.

Growers of wine grapes in Napa County are receiving \$24 a ton.

Lake County reports an exceptionally good grain crop this season.

Some damage was done by the recent rain to beans and raisins in Yolo County.

A new farm bureau center has been organized at Penobscot in Eldorado County.

Slight damage was caused to drying fruits and tomatoes by last week's showers.

Military training of all students at the Davis university farm began September 27.

A carload of hogs shipped to Portland last week from Gridley brought the growers \$2800.

The Capay Valley in Yolo County claims to produce one-fourth of the state's almond crop.

The board of supervisors of Glenn County is providing free poisoned grain to fight squirrels.

It is estimated that 35,000 tons of grain have been grown in the section about Dixon, Solano County.

The rice harvest began in the Sacramento Valley September 18, the earliest date yet in that valley.

Apple growers of Napa County are offering cash prizes for best packs of apples at the Napa County fair.

Sutter County farmers are organizing local farm bureaus in expectation of securing a county farm adviser.

H. P. Eakle and V. F. Dulcini of Yolo County each brought home a string of prizes from the state fair.

The newly organized Western Duroc-Jersey Association has begun an active campaign for the betterment of the breed.

Requisitions have been made for the purchase of more than 100,000 pounds of frankfurters by public institutions of the state.

Seventeen carloads of cattle were shipped out of Dos Rios, Mendocino County, on one day last week. Six and seven cents is being paid.

The government has made a base price on wheat at San Francisco and Los Angeles of \$2.10 per bushel. This is equivalent to \$3.50 per hundred.

There will be a large exhibit of livestock at the San Francisco Land Show, special exhibits of dairy cattle being made the week of October 13-21.

Anderson, Shasta County, shipped its first carload of prunes September 22. Growers are paying 25 cents a box to pickers instead of ten cents as last year.

A big \$100,000 bean cleaning and storage plant is nearly completed at West Sacramento across the river from the municipal wharves. It will be ready in time to handle this year's crop.

H. J. Baade, formerly farm adviser of Napa County, now has oversight of farm bureau work in the eight northern counties of Napa, Marin, Sonoma, Lake, Mendocino, Humboldt, Modoc and Trinity.

The newly established state cattle protective board has opened offices in Sacramento. One hundred fifty inspectors will be placed through the state to enforce provisions of the hide and brand bill.

## Central California

Fresno County will have two assistant farm advisers.

The cannery at Tulare is shipping in tomatoes from the Santa Clara Valley.

Kings County made a big winning at the state fair in Poland-China awards.

Rice growers of the Oakdale section of Stanislaus County report offers of four cents.

The horticultural commissioner of Kings County set aside the week of October 8-13 as squirrel week.

A 20 page bulletin on hog raising has been issued by the agricultural club of the Kerman high school.

Kings County creameries paid \$250,000 to dairymen for August butterfat. The highest price paid was 48 cents.

W. J. Higdon of Tulare County recently made the sale of four pure bred Holsteins to be shipped to South America.

The Tulare National Farm Loan Association has received its charter. Loans amounting to \$40,900 have been approved.

Milk producers of Fresno County are demanding a wholesale price of 20 cents per gallon because of the increasing cost of feed and labor.

The Dos Palos farm center at its last meeting discussed dairy sanitation and the coming wheat campaign to be taken up by the government.

The Stanislaus County farm bureau at its recent annual picnic pledged itself to do its bit in increasing the acreage of wheat and other food products.

Bean growers of Fresno County are planning to hold an after-harvest convention. There will be a general swapping of ideas on all cultural and harvesting questions.

The cannery at Manteca, San Joaquin County, is working night and day shifts to fill government contracts for tomatoes. It expects to pack between \$200,000 and \$300,000 worth of tomatoes.

The newly enlarged plant of the California Peach Growers' Association is now nearing completion, the rush work of packing going on amid the installation of new machinery and equipment.

The water has been turned off the rice fields in Stanislaus County and the harvest is in full swing. Buyers offering four cents have been turned down, the growers anticipating at least a six-cent price.

Chowchilla, Madera County, will soon boast of the biggest plow in the world. It is a subsoiler which will break up a sandstone hardpan to a depth of four feet. It requires three "75s" to operate it.

To furnish labor in the bean harvest the high school trustees of Salinas, Monterey County, decided to abolish temporarily the morning session of school, holding the afternoon session from 1 to 5 o'clock. The boys earn 35 cents an hour pulling beans.

At the recent meeting held in San Francisco, at the call of State Market Director Weinstock, representatives were present from 17 marketing associations including in their membership 50,000 producers of California. Permanent organization will be effected at a meeting to be held in the near future.

## Southern California

The Piru section of Ventura has suffered from forest fires during the past week.

A plant for the manufacture of orchard heaters is to be constructed at Upland, San Bernardino County.

Approximately \$6,000,000 will be the returns to walnut growers of Southern California for this year's output of nuts.

The canning company at Banning is making an addition to its plant to be used as a storeroom for its immense output.

The San Dimas Fruit Exchange reports 875,170 boxes shipped this season, an increase of nearly 300,000 boxes over last year's total.

Dry farmers in the "Mountain Empire" in San Diego County report splendid crops of potatoes, milo, feterita, corn and other products.

It is estimated that the Escondido, Twin Oaks and San Marcos Valleys in San Diego County have a total of 500 acres planted to tomatoes.

Broom corn has proved a success in San Diego County, one grower reporting the sale of his entire experimental crop to a factory in San Diego.

The new \$20,000 walnut warehouse at Saticoy, Ventura County, will this year handle 15,000 tons. The first shipment of 50 tons was made to Pittsburg.

The California Walnut Growers' Association named prices October 1. The association reports having received orders for twice as many No. 1 Softshell as it has.

The ginning of Imperial Valley's cotton crop began October 1. The acreage in that valley is nearly 12,000 and it is thought this year's production will be more than double that of last year.

Nineteen head of steers belonging to a farmer near Brawley recently died. The steers had been grazing on a field of Sudan grass and death is thought to be the result of prussic acid poisoning.

Growers of lima beans this year are expecting to get their share of the high prices paid for their crop. Last year by the time the price had gone up, practically all of the beans were out of their hands.

Winthrop Howland, who for several years conducted a goat ranch near Redlands in San Bernardino County, has removed to Monterey County. The goats, 80 in number, were shipped by auto truck.

A party of 150 men, women and children arrived in the Imperial Valley recently from Texas to work in the cotton harvest. They are from one of the banner farming sections of that state but have been driven out because of the two years' drouth.

The Hemet-San Jacinto Growers' Association celebrated on Friday, September 28, the second anniversary of the building of its cannery. There was an all day gathering of members and friends at the cannery and an inspection of the plant was made.

Directors of the Imperial County farm bureau are seeking to secure exemption from the army draft of Paul I. Dougherty, the local farm adviser, because of his being "engaged in agricultural enterprise necessary to the maintenance of military establishment, etc."

## The Coast

Redmond, Oregon, will hold its potato show, October 18-20.

The Northwest Livestock Show will be held at Lewiston, Idaho, November 8 to 15.

Shipments of the rutabaga and turnip crop of Washington will begin about the 15th.

Idaho will harvest 6,000,000 bushels of potatoes, according to estimate of the state university.

Some government contracts for potatoes have been made in the Seattle district at \$25 a ton.

A largely increased acreage of wheat will be sown in the McAllister district of Arizona this fall.

Some sections of Idaho report the loss of 50 per cent of their prunes by dropping induced by the heat.

Kootenai County, Idaho, is planning to open up a road system through the Coeur d'Alene Indian reservation.

A shipment of Jonathan and King David apples left Wenatchee on the last day of September for Australia.

Yields of from 650 to 850 pounds of beans per acre are reported from the Lenore and Gifford sections of Idaho.

The United States government is spending annually \$20,000 in Arizona and New Mexico in the destruction of predatory animals.

According to estimate of the state agricultural department of Washington that state has harvested 17,431 carloads of apples.

Cattle men of Kootenai County, Idaho, have formed an association to buy and sell cooperatively. E. R. Whitla is president.

This is prune picking season in the Boise Valley of Idaho and despite severe losses by dropping of fruit the crop is sizing up very well.

Idaho's state fair held at Boise September 24-29 was a great success. The exhibit of dairy cattle was one of the largest ever made in the state.

More wool remains in the hands of the sheep men of the Lewiston district of Idaho than for many years past. The sheep men are holding for larger prices.

Dairymen of the Frazer River Valley of British Columbia have formed a marketing association which has become strong enough to fix prices to the milk buyers.

The cranberry crop of Western Washington this year will be about three-fourths of normal. Some of the older plantings will run as high as 100 barrels to the acre.

With the exception of potatoes shipments of fruit and produce from the state of Washington to Eastern markets have been heavier than any preceding year. Several carloads of cantaloupes were shipped as far East as Cincinnati.

Pinto beans, comparatively a new crop, were this year produced in Colorado and New Mexico to the extent of 3,000,000,000 bushels. This is a pinkish bean spotted with brown, a little larger than the Lady Washington and produces well on dry land.

Dr. C. D. Marsh, poisonous plant expert of the United States department of agriculture, has just completed a series of meetings in Arizona showing by lantern slides the poison plants of the district and results to animals of eating them.

# 125 Registered Holsteins 125

## At PUBLIC AUCTION

McClure Farm, Santa Ana, Cal., OCTOBER 16-17, 1917

This sale is suited to the buyer who wants foundation animals of the greatest desirability. Within this sale three entire herds will be completely dispersed, placing at the mercy of public bidding great breeding animals that would not be sold under any other circumstances.

Both breeders and dairymen owning grade herds will find in this sale an unusually good selection of bulls ranging in age from calves up to mature bulls, some of them right in every way to head pure bred herds, and some young fellows that are just right to head grade dairy herds.

### Contributors to the Sale:

E. O. McClure, Santa Ana.  
A. Satterberg, San Jacinto.  
P. H. Jarrett, Lancaster.  
R. Nadeau, Saugus.

Santa Anita Rancho, Santa Anita.  
McAllister & Sons, Chino.  
Aro Herd, Buena Park.

### The Females Include:

A 28 pound cow and her three daughters.  
Sixteen daughters of King Pontiac Netherland Segis, son of King of the Pontiacs.

Twelve A. R. O. cows with records up to 28.43 pounds butter in seven days.

A full sister to a 31 pound four year old.

A granddaughter of Rag Apple Korndyke 8th.

A granddaughter of Tilly Alcartra.

Four heifers sired by a 29 pound grandson of King Segis.

A granddaughter of Hengerveld De Kol.

A granddaughter of Sarcastic Lad.

Eighteen granddaughters of King of the Pontiacs.

Many of these good females bred to sires of famous breeding.

### The Bulls Include:

King Pontiac Netherland Segis, proven son of King of the Pontiacs and out of a good record daughter of King Segis Pontiac. The breeder who wants a high class herd sire should look this bull and his daughters over carefully.

A son of a great 34 pound daughter of Sir Sadie Cornucopia, making him the highest record bull sold at public auction in California.

A son of Colantha Johanna Lad out of a granddaughter of Pontiac Korndyke.

A son of James J. Jeffries' great young herd sire, King Segis Pontiac Jannek, out of an 18 pound junior three year old daughter of a 21 pound cow.

A son of King Pontiac Topsy out of a splendidly bred 18.22 pound junior four year old.

And others of great desirability, including in the summary 14 grandsons of King of the Pontiacs.

Every animal over six months of age tuberculin tested and has individual certificate. Sale Begins Promptly at 10 A. M. Tuesday, October 16. Under Management

## Who's Who

With the issue of August 11 the Cultivator started its series of "Who's Who" articles to bring before its readers some of the livestock producers of California who are responsible for the large development of the industry. Where did they come from and how long have they been engaged in California development, also how do they look, so pencil and camera are to be used, and some homely, everyday photographs and notes regarding them will bring us closer together. Bear in mind we say "homely photographs" and not photographs of homely people. The idea we wish to convey is that so far as possible we will secure photographs in everyday surroundings at the homes of the livestock producers.

Written for California Cultivator By F. F. Stonerod

### E. A. NOYES AND CHAS. NOYES

THE two photographs are the likeness of Ed A. Noyes and his son, Charles. As the two are inseparable and closely associated in the purebred Hereford business we asked

ever win any premiums competing in such fast company. Right then and there E. A. determined he would breed a pen of birds which would beat this cocky gentleman if it cost him a large sum of money. He sent East and got a setting of eggs from

Ed A. Noyes

Charles Noyes

permission to say something about them together.

The elder Noyes has been a cattle man all his life. He graduated from the Hesperin school at Woodland in his early twenties—which was nearly 40 years ago. From that time to the present he has devoted most of his time to his cattle interests, excepting a three-year vacation spent in Santa Cruz. He calls that a vacation, but he did other things besides kill time while there.

Mrs. Noyes has a fondness for Plymouth Rock chickens and at one of the big poultry shows entered a pen of fine birds. Her husband became interested also and together they thought they had a pen of prize winners. When the judge placed them down the line about fourth or fifth another exhibitor joshed Mr. Noyes about the inferior quality of his birds and asked him if he thought he would

a noted breeder and the next year entered a pen of this breeding which won the championship in competition with the unbeatable exhibitor.

His object accomplished Mr. Noyes soon tired of chickens and ocean breezes and bought a big cattle ranch near Sutter, Sutter County, and he has been there ever since. He purchased a pure bred herd of Herefords last year in the East and now owns the foundation for a show herd. He knows beef cattle of course, and there are a lot of other virtues under his broad Stetson which have a charm to those who know him intimately. His son is now the active partner in the cattle business and is fortunate in having a tutor who has had a life long experience in breeding. Both father and son are members of the new Pacific Coast Hereford Breeders Association and of the National Association. They plan to exhibit a show herd at the fairs next year.

## Gophers in Alfalfa Fields

Written for California Cultivator By J. M. Bomberger

HAVE read the article "Protect Snake and Owl" in the Cultivator of September 15, relative to their helpfulness in keeping down the gopher,

and I am sure the snakes and owls are very helpful and should be protected, but on my Green Gold Ranch I found the common yellow weasel very much more effective in destroying gophers in an alfalfa field than any other enemy of the gopher.

In an alfalfa field the mower usually cuts up the gopher snakes so that their number are kept at a minimum, and it is very difficult for an owl to see a gopher in a good stand of alfalfa, while the weasel, whose burrowing habits are very much the same as those of the gopher, is right at home with the gopher, so to speak, being able to get the gophers in their

own runways and the young gopher in their nests. The mower does not get the weasel, even dogs do not get them readily. They are forced out at irrigating time, but are quite able to take care of themselves and should not be killed purposely at that time unless they get very close to the buildings.

On my ranch the gophers had gotten quite plentiful, but when the weasels began to make their appearance and to multiply they solved the gopher problem for us in a comparatively short time. Now since the gophers have been reduced to a minimum the weasels have automatically reduced so that there are now very few gophers and very few weasels. We kill weasels when they get very close to the buildings where the poultry is. We depend upon the cats to keep down the gophers close to the building. I do not know that we have lost any poultry because of weasels.

### Easier, Faster, Better

With less labor, at lower cost and at one operation, you can paint your stables, dairy buildings, poultry and hog houses, cellars, etc., clear, snow white—make them lighter, lean, attractive and thoroughly sanitary—put them in shape to pass the most rigid inspection of health boards or milk commissions. Instead of using white wash and some kind of disinfectant, use

## CARBOLA

The Disinfecting White Paint

Carbolic acid, mineral pigment combined with a powerful 20 times stronger than carbolic acid but not so corrosive or caustic. Positively kills lice, mites, ticks and is a preventive of contagious diseases that affect poultry and livestock. Ready as soon as mixed with water to apply with brush or sprayer. Has no odor and does not blister, scale or peel. One pound makes a gallon of paint that covers 200 square feet. Get some today and have it ready when wanted. Will not spoil by standing.

10 lbs. (10 gals.), \$1.00 and postage.  
20 lbs. (20 gals.), \$2.00 delivered.  
50 lbs. (50 gals.), \$4.00 delivered.  
Total package that covers 250 square feet and booklet for 25 cents postpaid. Get it from your dealer or  
Germann Seed & Plant Co.,  
Los Angeles, California.

## AGRICULTURAL FAIRS FOR COCHISE COUNTY, ARIZONA

By A. L. Paschall, Agricultural Agent  
There is nothing more beneficial in bringing the people of a community together for real and wholesome enjoyment and valuable lessons than district or community agricultural fairs. The farmers bring out samples of their crops, compare them, etc., which bring about better crop growing methods, crop standardization, better community unity and co-operation. The fair committees arrange for sports and games, such as baseball, foot races, potato races, sack races, etc. The ladies provide luncheon, or each bring their own basket lunches, and all have a good time. Every farming community should have a good agricultural fair this fall.

Thirteen of such fairs have been planned for Cochise County this fall, as follows: Friday, October 19—Stronghold Schoolhouse; Saturday, October 20—Light (for the 19th and 20th); Monday, October 22—Rucker Canyon Schoolhouse; Tuesday, October 23—Webb Schoolhouse; Wednesday, October 24—Double Adobe Schoolhouse (near McNeal); Thursday, October 25—McNeal; Friday, October 26—Garces Schoolhouse; Friday, October 26—San Simon; Saturday, October 27—Buena; Tuesday, October 30—St. David; Wednesday, October 31, Pomerene; Thursday, November 1, Cochise; Friday, November 2—Mt. View Schoolhouse near Willcox.

The local farmers' organization, where there is one, will have charge of the local fair. The local president of the organization or of the local fair appoints a committee of one for each of the following: livestock, poultry, field crops, garden, canned goods and other home products, arrangements, sports and games, boys and girls clubs. Each of these committees will set about to secure good exhibits and games, etc.

It is urged that the farmers secure a premium list for the state fair, which can be secured by writing secretary of the state fair, Phoenix, and make out the local exhibits to conform to the requirements of the state fair so that the exhibits can be used for the local fair and then be sent on to the state fair. Transportation for exhibits to the state fair will be free. Every person who has anything at all for a good exhibit should make entry on the form which can be obtained from the secretary of the state fair and make entries before November 3.

### SHEEP SCAB QUARANTINE

The first release of territory in Texas from quarantine on account of sheep scabies since the imposition of the quarantine against the entire state, July 1, 1914, is announced by the United States department of agriculture to become effective October 15. The removal of the quarantine affects 107 counties of an aggregate area of 121,451 square miles, or nearly one-half the area of the state.

At one time Texas, New Mexico, Colorado, Wyoming, Montana and all states to the west were under quarantine. From time to time the states and portions of states to the east also were under quarantine. The disease now has been brought under control to such an extent that the quarantine has been raised from most of this territory. After October 15 there will remain under quarantine only ten counties in California and the portion of Texas not included in the release just announced.

Sheep scabies is caused by a small mite which irritates the skin of sheep, causes the loss of large quantities of wool and sometimes results in the death of the animals. The disease is combated by dipping the affected animals in a weak nicotine solution, or in a solution of lime and sulphur.

### LIVESTOCK AT LAND SHOW

Among the beef breeds and dairy cattle which will be exhibited at the Land Show at San Francisco which opens October 13, B. E. Nixon, manager of the Revada Farms, near Napa, will exhibit his prize Guernsey herd. The State Hospital will send its blue ribbon Holsteins and William Mitchell his herd of pure bred Jerseys.

From other sections of California will come blue ribbon winners. A. J.

## SIXTEENTH SEMI-ANNUAL CONSIGNMENT SALE OF

# Pure Bred Holsteins

AT

LAKE MILLS, WIS.

October 23 and 24

### A Two Day Sale of Mighty Good Pure-Breds from Fine Herds and Absolutely Right

The Dispersal of Recreation Farm Holsteins, owned by Julius Lindstedt, Manitowoc, Wis. Thirty in number, well bred animals, and ten A. R. O. cows.

Some High Class animals taken from one of Wisconsin's best Show Herds, also from one of the good Show Herds of Minnesota.

A large number of Fine Cows—dividend Makers for Winter, many with A. R. O. records. There are 18 pound two year olds, a number of 20 pounders; some 24 and 25 pound four and five year olds, and one with 26.50 pounds.

These cows are in calf to a son of Rag Apple Korndyke 8th; to Count Paul Segis Pontiac, Sir Fobes Oak Homestead, North Star Parthena Sir Beets, Canary Oak De Kol Homestead, Lilith King of Rock, King Pontiac Thanatos and Segis Pontiac of Rock.

A daughter of King Alcartra De Kol Pontiac, the Karlen bull whose dam is a 36.59 pound three and one-half year old and whose sire is the \$50,000 King Segis Pontiac Alcartra.

A daughter of Johanna McKinley Segis; sons and daughters of King Segis Pontiac; a son, daughter and granddaughter of a 31.05 pound cow; a 33.48 pound bull, and a 35.59 pound bull.

Welch of Redwood City will exhibit eight pure bred Guernseys, among them Polly's Beauty, last year third in the United States test for butterfat production. In addition to several

other fine Guernsey herds there will be an impressive showing of Holsteins, Jerseys, Ayrshire, Shorthorns and other pure breeds of dairy and beef cattle.

## The Glenn County Fair

Written for California Cultivator By W. S. Guilford

**A** NUMBER of great district and county fairs have been held in California this year and they have been a credit to the state and the districts in which they have been held.

Judged by the enthusiasm of the directors and exhibitors, as well as the people of Glenn County and the Sacramento Valley, and by the variety and excellence of the exhibits, this was one of the most successful fairs of the season.

Last year the Orland Center of the Glenn County farm bureau held a one day stock show. Briggs of the Cultivator conducted the judging ring; Prof. C. W. Rubel of the state university judged the stock; and Farm Adviser W. H. Heileman was general utility man. At that time it was decided that there should be a Glenn County fair this year, and this has been a prominent subject for discussion at every meeting of the local farm bureau centers and the meetings of the board of directors of the county farm bureau organization. So the Glenn County fair is a farm bureau "baby," just one of the many good things the bureau has done for the agriculture of this part of the Sacramento Valley.

The fair was held at the ball park and on adjoining property, right in the town. A movement is on foot now for the purchase of permanent grounds for next year. Financially it was a success, the receipts for the first day being enough to more than cover all expenses.

Orland folks claim that nothing can stop anything they start. The tents in which the main exhibits were housed were blown down a few days before the fair was to have been held. This compelled the postponement of the event for one week, a thing that would kill some fairs, but this one was held bigger and better than it would have been had it been held on time.

And this one is just a starter. If one quarter of the livestock and agricultural exhibits that enthusiastic growers plan to exhibit next year are brought forward it will take a big area to house the show.

Space will not permit mention of all of the creditable exhibits in the agricultural section. There was a fine community display from Ord, one of the best irrigated sections of the valley. This won first prize. Princeton also made a creditable show and won many prizes in the individual classes. Frank B. Glenn of Glennaire had a show of many varieties of grains and vegetables. There was a lot of Indian corn that would have looked good in a real corn belt show, and all kinds of milo, feterita and such grains. Guilford Farm at Orland won first on citrus fruit display, olives and pears. There were apples and grapes and peaches that had been held in cold storage for weeks by growers all over the county.

In the industrial section there was a big show of automobiles—many of which were sold—and of tractors and farm machinery.

Orland is a real Jersey cattle breeding center, and the show of this breed was in keeping with the claims made. "The biggest and best show of Jerseys outside of the Island of Jersey," is one of the slogans of the Glenn County fair, and the claim is made that the Jersey show was the best made at any state or county fair in America this year. Over 100 head were shown—not a poor one—and hardly a common one in the lot. A detailed list of awards in this class is appended.

Jersey exhibitors were: S. F. Williams, McLouth and Dado, A. J. and Nellie A. Morey, H. D. Ward, D. F. Nickell, R. R. Smith, Al. Standiford, W. G. Gurnett, C. A. Whitsett, H. W. Hand, all of Orland, and Charles L. Leonard of Glenn.

Awards were:

Three year bull—1, Williams; 2, McLouth and Dado; 3, Morey. Two year bull—1, Williams; 2, Ward; 3, Nickell. Senior yearling bull—1, Smith; 2, Williams; 3, Standiford. Junior yearling bull—1, Williams. Senior bull calf—1, Morey; 2, Hand; 3, Gurnett.

Three year cow—1, Morey; 2, McLouth and Dado; 3, McLouth and Dado. Two year cow—1, Morey; 2,

McLouth and Dado; 3, McLouth and Dado. Senior yearling heifer—1, McLouth and Dado; 2, McLouth and Dado; 3, Morey. Junior yearling heifer—1, Morey; 2, Williams; 3, Leonard. Senior calf heifer—1, Hand; 2, Leonard; 3, McLouth and Dado. Junior calf heifer—1, McLouth and Dado; Leonard; 3, Gurnett.

Senior champion bull—William Junior champion bull—Morey. Senior champion cow—Morey. Junior champion cow—McLouth and Dado. Grand champion bull—Williams. Reserve grand champion bull—Morey. Grand champion cow—Morey. Reserve grand champion cow—McLouth and Dado.

Best herd—Morey. Best five cows in milk—McLouth and Dado. Breeder's young herd—Morey. Best females and bull, Jersey Cattle trophy—Morey. Best cow in farm reau cow testing department—W. S. sett.

The attraction of the swine exhibit was the show from Anchorage Farm. A model individual hog house, with fresh water wallow and corn shades and pens, was erected, an exact duplicate of the quarters at farm. The hogs shown were S. Leader, the reserve grand champion Berkshire boar of the world, and sired by him and by Iowa Champion Peer 2d and Mayhew's Leader 6th. Berkshires were also shown by A. L. Stevenson of Los Molinos and B. C. Ranch of Red Bluff.

There was a big show of Dutch Jerseys. H. P. Slocum & Sons of Los Angeles brought their state fair winners to compete with E. A. Kirk and F. Hicks of Orland. Slocum was the leading winner both of breeding stock and fat barrows.

Chester Whites were shown by Harry Hoffman of Chico.

Poland-Chinas made a strong showing of the hog show. They were exhibited by S. F. Williams, Erickson and Yarnall and Wesley McKay of Orland.

There was a big show of horses, particularly of good mares and foals. The prize of the stallion register board is a big incentive to the breeding of good horses. W. A. Greenwald of Orland won this on the get of the first prize Percheron stallion Radiant.

Butte City Ranch won six all-trophies on ponies exhibited by W.

Hanford, Kings County, Cal.

Dwyer, Jr., Thos. R. Dwyer and Richard C. Dwyer.

There is increasing interest in sheep in this part of the country, particularly in small farm flocks. Hampshire sheep were shown by McInnes and Salz of Red Bluff; Cotswolds by W. E. Searce and J. A. Younggreen of Orland; Karakules by W. R. Graves and Brownell Bros., of Orland; Merinos by W. E. Searce, and Shropshires by Guilford Farm of Orland. Guilford Farm Shropshires won the R. A. Beland silver trophy for the best flock of sheep exhibited by a Glenn County breeder. This must be won three years before it becomes the property of the winner.

There were special booths and exhibits at the fair made by the forestry department of the United States, department of agriculture, the Glenn County farm bureau, the Glenn County library and the University of California.

There were special excursions from nearby towns each day—and a big attendance all the time.

## Kern County's Second Annual Fair and Live Stock Show

Written for California Cultivator  
By F. F. Stonerod

KERN County's 1917 show was a lot better exhibition in some respects than the 1916 show and not to be compared with last year in others, particularly livestock.

There had been no material changes made in the buildings for the accommodation of the stock exhibits, and exhibitors complained with reason that new stables and pens had not been installed and that premium money was insufficient to break even on expense of exhibiting. But this fair has great possibilities. Kern County is the second largest county in the state. Her hills and valleys turn off millions of dollars worth of livestock annually. Her alfalfa districts are equaled by few and surpassed by none. The county is just on the threshold of wonderful development of natural resources and needs encouragement. Appropriating appreciable sums of money to finance a first class agricultural exhibit will assure Bakersfield and surrounding country wide recognition. The writer talked with several of the fair officials and was advised that next year's show will be a real attraction if war conditions do not prevent. New and modern stock pavilions are planned, large increase in premium money, elimination of prize lists for breeds of stock which do not show, better transportation facilities and so on.

The swine show this year was the big attraction to fair goers. Poland-Chinas predominated, with a limited number of Berkshires and Duroc-Jerseys on hand. Bassett and Marsh fought it out in the ring, and both breeders were satisfied with the awards. Chief Victor won grand championship honors from I B A Wonder who was placed ahead of him at Sacramento. Both Mr. Bassett and Mr. Marsh made splendid sales of breeding stock during the week. There is no better territory in which to dispose of breeding stock than Kern County. Marsh's big boar occupied a corner pen, and any hour of the day a large and wondering crowd could be seen inspecting this behemoth of the show. He was probably the largest boar ever exhibited in that part of the state.

Alexander and Kellogg showed their string of Milking Shorthorns with no competition, and the beautiful dual purpose cattle got more than their share of attention.

As usual, the horse section was well patronized although the classes were made up from entries of exhibitors of one or two animals. Professor Major judged cattle and assisted Mr. Bassett with the horses. The county farm adviser, assisted by Mr. Major, judged the swine.

The directors of the Kern County fair, headed by Fred Hall, are a fine lot of public spirited gentlemen who are going right ahead with plans for the show next year. Once annual exhibitions are established in Los Angeles and San Francisco these smaller shows on the circuit will secure livestock exhibits worth while, but the different fairs must offer inducements commensurate with the benefit such a

show would be to the community. If they do this it is certain that present facilities will be inadequate.

## San Francisco Land Show

Manager Joseph E. Painter of the livestock department of the San Francisco land show writes to Cultivator readers appealing for more attention to the livestock industry of the state. California livestock interests are increasing at a wonderfully rapid rate but under present stress he feels that still greater development should be urged and to that end has bent every energy to add to the attractions of San Francisco's land show by bringing together a great showing of pure bred and of fat cattle. He writes:

"California has reached near the topmost rung of the ladder in some avenues but is woefully lacking in up-to-date requirements in meat animal production. True, many good cattle have been introduced into the state during the last year or 18 months but these serve only to prove the inadequacy as a whole. It is almost inconceivable that California does not possess a public stockyard or competitive livestock market, and neither of these will materialize until a livestock exhibition worthy of present day requirements is an accomplished fact. As one visits the various county and local fairs, merit of high order is to

be seen. If the enterprising citizens of a locality get together a show of local merit why can not the citizens of the larger cities and communities get together and establish a show where the best of California can assemble and meet the best the entire country produces in a common arena, and upon equal terms. What is the world crying for today if not for meat? Is it not a fact that those peoples and nations, whose basic operations throughout the ages have been found-

## Holstein Bull Calf

High per cent of fat. Dam and sire's dam both test over 4.2 per cent fat.

Dam's official record at two year 24 pounds butter in seven days, 186 days 450 pounds butter. Test 4.28.

Sire's dam official record seven days 34.79 pounds and for thirty days 133 pounds butter. Test 4.21.

Sire's sister Grand Champion at Panama Exposition last year, also at National Dairy show Chicago in 1912. Note the combination high records and show ring type. Very cheap for quick sale. Write for extended pedigree and price. Delivered at your station guaranteed as represented.

## Third Sacramento Sale

State Fair Grounds  
Sacramento, Cal.

OCTOBER 30-31, 1917

**125 REGISTERED HOLSTEIN COWS,  
HEIFERS AND BULLS**

### CONTRIBUTORS TO THE SALE:

A. W. Morris & Sons, Woodland.  
Fred W. Kiesel, Sacramento.  
University Farm, Davis.  
Frank Hatch, Modesto

Bridgford Company, Knightsen.  
McAlister & Sons, Chino.  
Santa Anita Rancho, Santa Anita.

The splendid cattle in this sale will abundantly justify the claim made for them that they comprise the highest average in breeding and individuality of any offering yet made at Sacramento. There are many individuals in this sale, both females and males, that match in every respect the animals found only in the highest class offerings.

This sale will be particularly attractive at this time when breeders and dairymen are seeking the best cattle to be had, and it offers a rare selection of high class foundation animals. Never before in the history of Holstein sales in the West have so many females bred to such high class bulls been offered.

**And to cap the climax of rich breeding and individual excellence every animal in this sale is sold subject to tuberculin retest by the purchaser.**

A brief sketch of a few of the animals listed in this sale shows the splendid breeding which buyers will find on sale day:

- A 28 pound cow of splendid type.
- A show heifer sired by a 33 pound son of Pontiac Korndyke and out of a 21 pound daughter of De Kol 2nd's Butter Boy 3d.
- A daughter of King Walker 5th out of a 29.53 pound cow.
- A beautiful granddaughter of Pontiac Korndyke.
- A daughter of a 37 pound sire, bred to a 30 pound show bull.
- A 25.89 pound cow bred to a bull whose dam made 847.55 pounds butter in one year.
- A heifer whose dam is a 21 pound granddaughter of De Kol 2nd's Butter Boy 3d, bred to a 35 pound sire.
- A daughter of a 29.50 pound cow, bred to the only sire in the west with three 30 pound daughters.
- A daughter of a 38 pound sire and out of a 24 pound dam.
- A granddaughter of Colantha Johanna Lad.
- A granddaughter of Sir Veeman Hengerveld.

This list by no means covers the outstanding females in this sale, and the sires to which they are bred are a story by themselves, for no sale in the West has ever approached this sale in respect to the outstanding breeding of the bulls to which the offerings are bred. We find a very large number of females in calf to such sires as Prince Gelsche Walker; King Mead of Riverside; King Morco Alcartra; Sir Aaggie De Kol Acme, son of Aaggie Acme of Riverside 2nd; Prince Gelsche Walker Korndyke; It, son of the first 37 pound cow and the first cow to make 1200 pounds butter in one year; Sir Skylark Ormsby Hengerveld, the only sire in the West that has three 30 pound daughters; King Segis Alcartra Prilly, son of the \$50,000 bull and out of a 30 pound granddaughter of Prilly; King Segis Alcartra Abbekerk, son of the \$50,000 bull and out of a 30 pound daughter of Tidy Abbekerk Prince.

The unusual offering of high class bulls in this sale will win the approval of the many discriminating buyers now in the market for extra good herd sires. These are typical of those to be sold:

- A grandson of King Korndyke Sadie Vale out of a 29.39 pound three year old daughter of King Segis Pontiac.
- A son of Prince Gelsche Walker out of a 29 pound dam.
- A son of Prince Gelsche Walker Korndyke out of a 27 pound dam.
- A son of Prince Gelsche Walker out of a 24 pound dam that made over 800 pounds butter in one year.
- A son of Prince Gelsche Walker out of a good two year old daughter of a cow that made over 800 pounds butter in one year.

- A son of King Segis Alcartra Abbekerk out of a 26 pound junior two year old daughter of a 30 pound sire.
- A show bull sired by a 34 pound sire out of a 19 pound two year old whose sire is a 33 pound son of Pontiac Korndyke.
- Two sons of King Mead of Riverside out of a 27 pound dam.
- A son of King Mead of Riverside out of a dam that made 24.75 pounds butter in seven days five months after calving, and 29.545 pounds milk and 1077.75 pounds butter in one year.

The catalog of this sale will not be available until close to sale day. Write for a copy now and one will be mailed at the earliest possible time.

## Retained After-births

**Cows can be made to clean easily without using force**

When cows do not clean properly after calving, it indicates a germ infection which is likely to run through the entire herd and result in abortion and barrenness.

Our Government and other authorities assert that retained after-birth, premature calving, sterility and calf scours are all the result of infection by the abortion germ, and retained after-birth is one of the first symptoms.

The after-birth should be removed at once without force and the cow treated with a powerful antiseptic to prevent her becoming an aborter or sterile. Authorities state that while there is no absolute cure for abortion and sterility, nevertheless the infection can be controlled by prompt treatment and the animal saved for successful breeding.

B-K is scientifically correct for this work. Used as a douche for the uterus, it quickly brings the after-birth, dissolves the slimy albuminous matter, kills the germs, stops discharges and controls the infection. B-K does not cause straining, but is soothing and heals the tissues.

Other germicides such as carbolic acid, cresol, Lugol's solution, iodine, etc., tend to irritate, do not dissolve the slimy albumins, but tend to coagulate or thicken them, thereby preventing destruction of the germs and cleansing of the tissues.

B-K is convenient. Just add water as directed, and you have your treatment for calves, bulls and cows and also your disinfectant for general use.

B-K is used so successfully by leading breeders that it is now sold over the entire world and the demand for it has increased five hundred per cent in three years. A well known breeder of registered stock says:

**Clean and clear as water**

"B-K is of great value in douching cows which do not clean readily after calving. Have never known it to fail to bring all things right before the fourth day.

B-K is sold by dairy and farm supply houses, druggists, general stores, etc., everywhere. Dealers wanted everywhere.

Write us for more evidence from users and for our bulletin No. 52, "Contagious Abortion."

## THE FRESNO DISTRICT FAIR

Continued from Page 371

to the others than to advertise because he is a range sheepman and not a pure bred breeder in the strict sense of the word. The judge put his stamp of approval on the Bidegaray exhibit and it was indeed one to be proud of when it is considered that the owner brought his animals in

Looking Their Prettiest in Front of Grandstand at Fresno

from the hills two days before the fair opened.

The swine section was strong in Poland-Chinas and Duroc-Jerseys, particularly the former. H. I. Marsh fought it out with Will Bernstein for Poland-China honors. Bernstein was unbeatable in most of the sow classes, while Marsh got the lion's share of the ribbons on boars. Old I. B. A. Wonder, veteran of many California show ring battles, emerged victorious over Rosebud Chief who was reserve

four years. This herd also lacked condition but had outstanding merit. Prince Riverside Walker, the Higdon herd bull, finished in the third money but looking at him from a strictly dairy standpoint, considering his wonderful breeding, and his having probably the best middle of any bull in the show, this son of Prince Gelsche Walker should leave a lasting impression on the breed in California be-

cause he is in good hands. The Gibson bull seems to get better with every show. He did not show to advantage at Sacramento, but at Modesto and Fresno he was hard to beat. He has wonderful length and quality, and in another year with careful handling he will be a strong competitor in the show yards.

Frank Helm brought out a string of 30 head, and J. T. Phillips, a young breeder showed for the first time. Both exhibited herds more to fill in

First Prize Guernsey Herd

This is B. E. Nixon's great herd, winner of the \$300 feature class, five herds competing.

champion at Sacramento and grand champion boar at Hanford last week. Hale also got in the money with Smooth Orphan.

J. B. Thorp, who had made the Nevada fair at Fallon the previous week showed the classiest lot of red hogs and the only herd of Jersey cattle. He won consistently with his hogs. The Fresno County boys pig club made a splendid exhibit which was worthy of emulation.

The Holstein show was a fine one. Gibson and Bridgford had enjoyed seeing each other get beaten all the way from Sacramento. They had a friendly tilt at Modesto the preceding week and then resumed the battle at Fresno. Professor Rubel tied the ribbons and tied them with satisfaction. He liked the Bridgford Company's cow, Miss Korndyke Mercedes 2nd, as well as did Prof. Kildee at the state fair and gave her senior and grand champion with the sensational Bridgford senior heifer calf, Princess Inka Buttergirl, as junior champion. Gibson Company won senior champion bull on Segis Creamcup Pontiac, but was beaten for grand champion honors by the Bridgford state fair champion, King Segis Alcartra Prilly. Mr. Thornton showed Admiral Burke in this class and ran second. This bull made a remarkable showing considering the fact that he was brought from the Thornton ranch the opening day of the fair without any fitting whatsoever. He is the bull which formerly headed the Sherman herd in Fresno County and whose get are uniformly good individuals, particularly in the rear end. Six of his calves shown by Mr. Thornton were evidence of the ability of this great sire to produce straight backed, mellow fleshed heifers with excellent udders. W. J. Higdon brought up the best herd he has exhibited at Fresno in

the dairy cattle section than to win ribbons because neither had employed a herdsman to fit the stock for competition. That they got in the money several times in competition with animals which had been out for weeks is noteworthy. Mr. Helm showed a splendid two year old cow in Netherland Vale Quesac and won second prize with her. He was first in the junior bull calf class and second in senior bull calves. Higdon, Bridgford, and Gibson captured the lion's

share of the prizes in get of sire, produce of cow, and the herds.

T. T. Miller exhibited the Short-horn herd he had at the state fair and it was even in better condition, which speaks well for the efficient handling of the herdsman, Andy Simpson. Dr. Little, in charge of Alexander and Kellogg's Milking Shorthorn string led a wonderful class into the ring. It was the first opportunity Fresnoans had to see a full herd of the dual purpose cattle, and they showed their appreciation of the exhibit throughout the week of the fair. There was no competition on the Shorthorn classes but both exhibitors had plenty of competition at Sacramento and captured the majority of the big prizes. Mr. Miller plans to show at Riverside and then at San Francisco and possibly Portland.

The Nevada Guernsey herd attracted more attention possibly than any single exhibit on the grounds. It was the first time Fresno fair goers had had the opportunity of seeing a high class display of this breed. The barn was beautifully decorated and old Itchen Daisys May King of Langwater who has been a sensation on the circuit this year turned away the crowds last week. Mr. Nixon's one regret was that he had no competition, and it was George Hemming's first show where he had no competition. However, the pleasure of introducing the Guernsey breed in this part of the state more than compensated the owner, and when the Nevada herd lined up alongside four other herds of a different breed in front of the grand stand on Thursday and won first prize in the \$300 classic of the show, Mr. Nixon had reason to feel proud. The Bridgford Company got second money and third. This feature of the fair is a big one and the amount of prize money offered larger than is offered for a single dairy class in any show in America.

## Feeding the Layer

Written for California Cultivator By Jean A. Koethen

**T**HE wise feeder does not feed his hens always in the same way. He uses the feeds which he has or can procure for the least money and finds ways of adding variety by the use of vegetables or an occasional moist mash or by occasional feeding of green cut bone. Sprouted grains are always an appetizer, but sprouting in summer in California is not as successful as in winter. Hens that are fed all the sprouted oats or barley they will consume need little other grain.

When the pullets are nearly ready to lay additional protein in the form of linseed oil cake or soy bean meal may be added to the mash. These vegetable meals do not take the place of the fish meal or beef scrap; they supplement them and add variety to the ration.

Encouragement is never more necessary, perhaps, than during the molting season. We have so far outlived the idea that hens should be forced to molt at a certain time whether they are ready or not that we are willing to concede that there may be certain advantages in keeping them laying as late in the fall as possible. A few hens lay on clear through the molt, but many more, and they are usually the best layers in the flock, continue laying while the old feathers are dropping. A little care in feeding may keep these hens laying until the first of October or even till November. Vegetable protein in the mash, sprouted oats, clabbered milk, green cut bone, all kinds of greens in unlimited quantity will help them to keep the egg basket full till the pullets are ready to relieve them.

One of the best ways of getting fall

eggs from hens of the heavy breeds is to let them hatch and rear a brood in early summer or late spring. This cannot be done on a large scale, of course, but where the flock is not large it is possible to set nearly every hen sometime during the summer. I prefer to set mine in August, just as they are approaching the molt. The long fast makes the old feathers fall quickly. The hens will not lay as many fall eggs as the hens that have hatched in June, but they are ready for the breeding season in January, and some may begin to lay in November.

Comfort plays a large part in hen efficiency. It is wonderful how hens will sometimes lay in spite of mites, lice, filthy yards and houses, lack of shade and ill ventilated sleeping quarters, but the hen that can keep going with everything against her will be a top-notch if she has a chance. Water is so cheap, why not let them have it always clean and cool? Shade is as cheap as water, why let them swelter in the sun or under the roosts of a henhouse that is as hot as an oven? Elbow grease costs nothing but will power, why let filth accumulate on dropping boards or in runs? As for mites and lice, there are all sorts of powders and sprays and paints; it is pure laziness that lets hens suffer from these pests. If the war teaches us to do the best we know and to let our hens have a chance to do their best, there is that much of a silver lining to the cloud. If it is worth while to save crusts and crumbs it is surely worth while to make the hens for whose living we pay so dearly bring in the greatest possible income.

## Save the Feathers

**T**ONS of feathers are lost each year in small amounts because farmers and poultrymen do not think it worth while to save the small quantities plucked from birds used at home and for the local market. Another reason probably is that the prices are thought to be too small to make saving these feathers seem worth while. If a few minutes be taken when plucking is done to separate the various grades and to practice the best methods of curing them there is no reason why a nice little sum could not be saved and the aggregate make a considerable advance in the annual returns from poultry.

Chicken, duck and goose feathers are always in demand and should be saved but ought to be kept separate and the larger feathers placed by themselves. In no case should chicken and turkey feathers be scalded because hot water removes the animal oil and reduces the grade. Such feathers scalded command only a fraction of the price paid for dry picked ones.

Another good point is to keep the white separate from the colored feathers because white stock brings a higher price than dark. After being

plucked the feathers should be spread out until the moisture is thoroughly dried out of them. During this time they should be turned every day. Turkey body feathers, while too large as they come from the bird are often chopped and used in cheap pillows.

Not long since I heard a dealer state that hen and turkey body feathers have only saving value when dry picked. They should be laid out on the floor and forked over daily and should be in a marketable condition in about three days, when they can be shipped in burlap bags.

Chicken quills should be thrown away and never mixed with softer body feathers because they will spoil the grade. Turkey quills should be graded, the long tails put in one box, those from the first two joints of the wings in another and those from the last joint in a third. The shorter quills and those from the rump ranging from five to eight inches in length should be placed in a burlap bag. After a thorough airing they may be packed for shipment. Moisture allowed to remain in quills rots them very quickly and thus reduces the grade.—Exchange.

## It Pays to Fatten Chickens

To market chickens which have not been properly conditioned through some method of fattening is an economic waste. Chickens will not reach their maximum development of flesh without special feeding. The farmer who sells his chickens without fattening them deprives himself of a large part of his possible profit, since the increased weight produced by an efficient method of fattening is produced at a low cost. The underfattened chicken loses a much greater percentage of its weight in dressing than the chicken which has been properly fed.

The gains which can be made by crate feeding depend upon the quality of the fowls and the skill of the feeder. Cocks may be expected to make a net increase of from 15 to 20 per cent, hens should gain from 20 to 30 per cent and broilers from 25 to 50 per cent in from eight to 15 days.

From 350 to 400 pounds of mash fed to good chickens should produce 100 pounds of poultry meat in from eight to 15 days.

### STATE FAIR AWARDS ON BRONZE TURKEYS

John G. Mee writes that the list of awards as printed in the Cultivator of September 22 was incorrect in regard to his winnings, which were as follows: Old hen, 1, 2, 3; yearling hen, 1, 2, 3; yearling tom, 2.

Not only should the hens be well treated, but the hen house—the home of the hen—should have a thorough housecleaning. Droppings should be removed at least once a week. The nests and roosts should be sprayed often with coal tar disinfectants to insure cleanliness.

## Science Says Buttermilk

Bulletin 162, just issued by the Department of Agriculture, states that Buttermilk is the only preventative of White Diarrhoea. It has been proven that many birds apparently in perfect health have these germs in their system and that they are transmittable to their progeny. Science has discovered that the Lactic Acid Bacilli of Buttermilk kills these poison germs. Write to Berkeley for this important bulletin, free.

The Dry Buttermilk in GLOBE A-1 BUTTERMILK MASH contains 10,000 live Lactic Acid Bacteria to the cubic centimeter.

Globe A-1 Buttermilk Mash is a high protein feed, free from any filler.

Globe A-1 Buttermilk Mash will prevent bowel troubles, keep your flock in glowing health, produce more eggs to market, better eggs to hatch.

Costs no more than non-buttermilk mash.

Satisfaction or Money Back.

## Would you plant your fruit trees in large tubs?

"Without the use of dynamite in tree-planting," says U. S. Bulletin No. 38, "the roots soon meet with the smooth and compacted sides of the hole, through which they have great difficulty in penetrating. The tree is in about the same situation as if it had been planted in a large tub."

But when you plant your trees in holes blasted with

### GIANT FARM POWDERS

STUMPING — AGRICULTURAL

the trees will grow faster, develop deeper, stronger roots, and bear earlier. "When dynamite is used," continues the bulletin, "cracks are formed in the soil to distances of five or sometimes six feet on all sides. This makes the very best conditions for the continued growth of the tree. For tree planting dynamite is recommended confidently as the best method of preparing the soil."

In selecting explosives for your orchard work, be careful to get those that will crack, powder and loosen the soil, rather than pack it or throw it in the air. The proper explosives are the Giant Farm Powders. There are two of these—Eureka Stumping Powder and Giant Stumping Powder—both improved forms of dynamite, made especially to meet western agricultural conditions. They are sold by distributors everywhere. Ask your dealer for them.

## Questions and Answers

ANSWERS BY EDITOR AND STAFF

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

#### Leg Weakness

One of my largest young turkey toms, (three months old) has recently lost the use of his legs. He does not seem sick otherwise—eats and drinks as usual. Can you tell me what ails him, and is there anything I can do to cure him?—Subscriber, Alta Loma.

It is difficult to prescribe for a turkey without knowing anything about his diet. These case of leg weakness sometimes are due to rheumatism, the result of running on wet alfalfa, but more often come from heavy feeding coupled with too little exercise. Sometimes, again, they are the result of a lack of bone making material in the ration. In either of these two latter cases the legs are simply not strong enough to carry the weight of a rapidly growing body, and the bird stops using them. If you will give this tom a mash containing bone meal twice a week (one part bone meal to five or six parts of bran will do) and put him on a ration of rolled oats chopped with onions and other greens and clabbered milk for a while, making him exercise as soon as he seems able to use his legs. I think he will soon be as lively as usual.—J. A. K.

#### Addresses of Agricultural Colleges

Many people order bulletins for which they have no use, simply because they are free. I have known men engaged in stock raising to send for bulletins put out by an Eastern state. Such bulletins, especially those on livestock feeding, while interesting and educational, usually do not apply to our conditions, because the feeds are so different, most of the rations mentioned containing corn which is used little in most parts of California as a feed for stock. While I believe in ordering bulletins, I also believe in being conservative and ordering those of most interest in our particular branch of work and those applicable to our conditions. I would suggest that you publish addresses of nearby agricultural colleges for the benefit of readers in ordering bulletins. Wishing to order some bulletins I was surprised to find that I knew the location of less than half of the agricultural colleges of western states.—Subscriber, Mt. Dome.

The agricultural colleges of the following states, with their locations, may be of interest to the subscriber: New Mexico, State College; Colorado, Fort Collins; Wyoming, Laramie; Montana, Bozeman; Arizona, Tucson; Idaho, Moscow; Utah, Logan; Nevada, Reno; Washington, Pullman; Oregon, Corvallis; California, Berkeley.

#### Spraying Apricots

What time during the winter is the best time to spray for black scale on apricots? What is the most effective spray for the purpose?—Subscriber, Watsonville.

Wait until the trees are entirely dormant, prune and spray with strong kerosene emulsion. The formula for crude oil emulsion, perhaps one of the cheapest and most effective, is as follows: Water, 175 gallons, liquid soap, three gallons, crude oil, 25 gallons. Fill the spray tank with the 175 gallons of water; add the liquid soap; agitate thoroughly for one minute, after which add the crude oil, continuing the agitation. If the liquid soap cannot be had, use 20 pounds whale oil soap dissolved in 10 gallons of boiling water, to which three pounds of lye have been added. During the spraying operation this mixture should be thoroughly agitated and great care taken to wet all of the twigs. From eight to 15 gallons should be used on a tree. The application should be made from November to February. The crude oil

emulsion is especially recommended for black scale, European fruit scale, European pear scale, cherry scale and other scales infesting deciduous fruit trees. It should be applied in the winter when the trees are dormant. To also kill moss or lichens on fruit trees add two pounds of lye to the formula of the stock solution.

#### Melilotus on Heavy and Alkali Soils

Please give information regarding melilotus alba or the white sweet clover. Is it adapted to heavy clay soils and will it grow on alkali soils? What are its moisture requirements?—Subscriber, Hanford.

This question was referred to Prof. R. S. Vaile of the citrus experiment station and he answers:

Melilotus alba, or the white sweet clover, grows well on a wide variety of soils. It will stand more either of acid or alkali conditions than most of our clover crops. While it is not recognized as an alkali loving plant, yet it will grow on land that gives decided alkali reaction. For example, it will probably flourish wherever land is suitable for the culture of sugar beets.

**Catalogues**—Good Printing. Specialists in preparing nursery, seed, poultry and live stock catalogues and all kinds of commercial printing. For prices and information address **WOLFER PRINTING CO.**, 424 Wall St., Los Angeles.

**Our Printing Will Get Results for You.** It will help to sell your goods and earn you profits. Send for samples and price list. G. C. Gallagher, 441 Sacramento St., San Francisco.

### LUMBER

**Lumber—Sash—Doors**—Plumbing Supplies—Building Materials of all kinds, new and 2nd hand. \*A. R. W. Shingles 50c per bundle. Send list for estimate. Dan P. Dolan, 1670 Mission Street, San Francisco, Cal.

### HOGS

**Registered Durocs**—We offer for sale a choice service boar out of a daughter of Mesto King and by a grandson of Burk's Good E Nuff; young sows and boars out of Model Queen of U. F. and by a son of Golden Wonder; young sows and boars out of a granddaughter of John Orion and sired by a son of Model Col.; three young boars out of a great sow of Crimson Wonder breeding and sired by a son of King's Col. Every one cholera immune by the simultaneous method. Registered, crated free of charge. If you cannot visit us write for prices. Derryfield Farm, L. O. O. F. Building, Sacramento, Cal.

**Chester Whites, the Billiken Brand**—The big winners at the California State Fair; Billiken was Grand Champion boar; a son was Reserve Grand Champion and a daughter was Grand Champion sow. Do you want some of this strain? Twenty gilts bred to farrow during October and November. Fifty Billiken pigs, both sexes—March and April farrow. Every animal is cholera immune. Write for prices and booklet on Chester Whites. C. B. Cunningham, Mills, Sacramento County, California.

**Grape-Wild Farm Berkshires**—World's Fair Grand Champion Grand Leader 2nd heads our herd, not only himself a champion but the sire of champions. At the 1916 California state fair his daughters won all of the senior sow classes including the grand champion sow. At the 1916 Oregon state fair a Grand Leader sow was junior champion. We are offering a number of choice boars of exceptional breeding and are also booking orders for fall pigs. A. B. Humphrey, Escalon, San Joaquin Co., Cal.

**Large Yorkshires**—Choice spring boars, gilts and weaned pigs from champion sow P.P.I.E. or from breeding of champion boar and sow Sacramento, 1916. If you see them grow you will like them. Riverina Farms, Paradise Road, Modesto, Cal.

**Superba, World's Grand Champion Poland-China boar and one of the greatest sires of the breed.** Spring boars ready for service, also few sows bred to this noted sire, reasonably cheap. Rough's Greenfields, Arlington Sta., Riverside, Cal.

**Wanted**—Farmers, orchardists, livestockmen to use classified liner advertisements like this. Thousands of people read every ad and the cost is only 3 cents per word per issue, minimum 35 cents. Extra lines of white space above and below cost only 16 cents per line.

**Duroc-Jersey Boars 1 Year Old**—For Sale—Sons of Burk's Good E Nuff, Grand Champion Illinois State Fair, 1914. Out of Queen Is Rite, Grand Champion California State Fair, 1916. A. A. Trueblood, P. O. Box 582, Sacramento.

**Bernstein Sells 20 head of choicest Poland-Chinas at the Big Sale October 19 at Hanford, Kings County. W. Bernstein.**

**Duroc-Jerseys**—See our Gold Models at Riverside, October 9th to 13th. Peters, Lamson & Walker, Devore, San Bernardino County.

**Rancho Rubio Durocs**—Nothing to sell at present. A fine bunch of gilts and a few extra good service boars for this fall. Elmer Lamb, Ceres, Cal.

**Big Type Durocs.** Well grown out February and March pigs of either sex in any quantity. We ship only the tops and butcher the culls. F. M. Johnson, Napa, Cal.

**Most Money in Duroc-Jerseys.** Bred sows and weanlings, either sex all the time. Delta Farm and Live Stock Co., Colton, Cal.

**Large Yorkshires**—The ideal hog for the progressive farmer. Service boars and fall pigs, both sexes, for sale. A. L. Tubbs Co., Calistoga, Cal.

**Large Type Poland-Chinas** are prolific and profitable. Can furnish boars any age at reasonable price. J. A. Crawshaw, Hanford, Calif.

**Large Type Poland-Chinas**—Very best stock. Prices reasonable. Weanlings my specialty. C. R. Hanna, Riverside, Cal.

**Durocs**—P. & L.'s Defender by Defender heads herd. Joseph Prendergast, Route 2, Box 87A, San Bernardino, Cal.

**Model Herd Berkshires** bred for size and quality. Weanlings and gilts. J. L. Gish, Laws, Calif.

**Carruthers' Farm Berkshire Hogs.** Our herd won Premier Exhibitor prize at the P. P. I. E. Exposition, Mayfield, Cal.

**Poland-Chinas**—A few good breeding boars. S. F. Williams, Orland, Cal.

### LIVE STOCK

**Butte City Shorthorns, Shropshires, Berkshires and Ponies.** Stock of all ages for sale. Can supply one or a carload. Get our prices and descriptions before buying. Butte City Ranch, Box C, Butte City, Glenn Co., Cal.

**For Sale**—One Thoroughbred Toggenburg Buck four years old. One Thoroughbred Saanen Buck seven months old. R. Olson, Farley, Cal.

**Registered Shires**—Blackhawk Stock Ranch. Importers and Breeders, Easton & Ward, Burlingame, Cal.

**AUTOMOBILE STORAGE BATTERIES**  
Titian Batteries for Service, get our prices before buying or having an old battery repaired. Call or write, Olive Street Electrical Co., 910 South Olive St., Los Angeles, Cal.

### CATTLE

**For Sale**—Retail Dairy of twenty-four cows. Splendid trade at good prices. Everything up to date, and a fast growing business. Will sell all or half to one who will take full charge of the business. A splendid chance for the right man. Best of reasons for selling. L. R. Thompson, Sierra Madre, Cal.

**Pedigreed Bull Calves, Registered \$50.00, unregistered \$25.00.** Service bulls \$75 and up. Good individuals from producers. Cows with yearly records at a profit, tuberculin tested. Write or come and select. Horses. N. H. Locke Co., Lockeford, Cal.

**D. O. Lively Stock Farm, Inc., 215 Hobart Bldg., San Francisco.** Breeders of Hereford cattle. A few choice heifers for sale. We buy and sell live stock on commission. Farm at Mayfield, Cal.

**Venadera Jerseys,** the herd with official yearly records. Calves of both sexes for sale. Guy H. Miller, Route 1, Modesto, Cal.

**Registered Holsteins out of ARO Dams.** Grandsons of Pieterje Maid Ormsby, 35.55 pounds average 5.31. Geo. Kounias, Modesto Farms, Modesto, Cal.

**Veramont Stock Farm Pure Bred Herefords.** Location Plumas County. Ideal for stamina and vigor. Bulls for sale. Address H. M. Barnegrove, San Jose, Cal.

**Registered Holstein Bulls** from high producing dams for sale at reasonable prices. Also a few choice females. McAllister Sons, Chino, Cal.

**Sunshine Farm Jerseys**—Bulls from officially tested dams for sale. E. E. Greenough, Merced.

**Dairy Cows Wanted**—Carloads or less by the Burr Creamery Co., Station C, Los Angeles, Cal.

**Young Holstein Bulls, bred right, grown right, priced right.** Creamcup Herd. M. Holdridge, Modesto, Calif.

**Registered Holstein Bulls** of various ages for sale. Millbrae Dairy, Millbrae, Cal.

**Registered Jerseys**—both sexes for sale. J. R. Carhart, Fullerton, Calif.

**Holstein Bulls** from record cows. Prices right. A. M. Bibens, Modesto, Calif.

### MACHINERY

**WHY BUY NEW? SAVE HALF**  
Material guaranteed. It's second-hand after used few times, but not worn out. Engine snaps: 6 Stearns, \$89; 10 h. Stearns same as new, \$145; 9 Foos, \$125; 18 Western, \$295; 34 Lambert, \$390. Many others.

**NEW, USED WOOD, GALV. TANKS**  
All sizes; galvanized wagon tank, \$48; 3500 swell corrugated galv. tank, \$72.50; 10,000 gal. redwood, \$75; 10,000 galvanized \$135; 16,000 corrugated galv., \$135; 5000 gal. redwood, \$48; 25,000 gal. redwood with stand, \$135; 8000 redwood and stand, \$75.

**WINDMILLS, SPECIALLY PRICED**  
8, 10, 12, 16-ft. sizes. Pump as much water as new ones, at half price; costs nothing for fuel.

**PUMPS, CYLINDERS, PIPE**  
2½-in. two-stage hor. centrifugal pump, \$38; 2-in. rotary; 3 hor. cent., \$35; 5-in. two-stage B. J. hor. cent. pump, \$175; 8-in. hor. cent., \$150, pumps 200 in. water; deep well double-acting No. 2 Ames, \$130. Large Bulldozer jacks, \$68. Small Bulldozer, \$42.50. Plunger pumps 5x6 air compressor, \$29. Pipe fittings.

**RANCH MACHINERY**  
Walking and riding plows, harrows, cultivators, scrapers; brand new ¾-in. cable, 6c; water troughs, \$4; bone grinder; feed mill; sprayer; mowers, rakes, belting, sundries. Down town office **DEMMITT CO., UP-STAIRS, 120 N. Main, Yards, 816 Yale, Los Angeles.**

**Gasoline Engines, the largest stock of used gas engines in California from 2 h. p. to 100. Thoroughly overhauled. Machinery Exchange, 733 North Spring St., Los Angeles.**

### SEEDS AND PLANTS

**Alfalfa Planters,** fill your fall requirements NOW with GREEN-GOLD seed. High quality because of personal field selection. Low price because of direct dealing. Send for samples and prices. Bomberger Seed Co., Modesto, Cal.

**\*\* ORDER YOUR SEEDS NOW \*\***  
If you are going to need any seed for next season now is the time to render your order. It may be impossible for you to buy what you need later. V. A. Peterson Alfalfa Seed Co., Arbuckle, Cal.  
**\*\*ALFALFA SEED OUR SPECIALTY\*\***

**Alfalfa Seed**—Common variety, Hairy and Smooth Peruvian. Grown under ideal conditions. Do not buy until you have compared my prices and samples with seed others offer. E. F. Sanguinetti, Yuma, Arizona.

**Rhubarb**—\$1127.00 from one acre. A crop every month of the year. Write to me and I will tell you how you can do as well. J. M. Stone, Lodi, Cal., Route 4.

**Vetch Seed**—New crop clean seed, \$4.00 per 100 lbs., on car. Alsike, Red Clover. Price on application. Carlton Nursery Co., Carlton, Ore.

**20,000 Yellow Calla, Elliottiana; Pink Calla, Rhexannii, Spotted Leaf White Calla.** William Richard Nursery, Santa Cruz, Cal.

**For Sale** 50,000 Choice Banner Strawberry Plants—Hugh C. Newton, Castella, Cal.

**New Crop Alfalfa Seed** now ready. Not the lowest in price, but high in quality. Go Turner, Yuma, Arizona.

### MISCELLANEOUS

**Famous Hairy Peruvian Alfalfa Seed**—Highly recommended by U. S. department of agriculture. Only carefully selected seed shipped. Prices and samples gladly furnished on application. E. F. Sanguinetti, Yuma, Arizona.

**Slacked Lime**—Send for sample and information. Price right. Let me help you. H. B. Matthews, 350 Woodberry Road Pasadena.

**To Reduce the high cost of living, send for our Wholesale to Consumer Catalogue.** Smith's Cash Store, 112 Clay St., San Francisco.

### TURKEYS

**Our Geese and Turkeys Win Again**—Grand Champion Sweepstake Special, for best pair of birds in show. For size, vigor and quick maturity, our stock are best, East or West. Stock and eggs in season, also Collie pups. Correspondence solicited. John G. Mee, St. Helena, Cal.

### FARM LANDS FOR SALE

**For Sale**—Splendid opportunity for party with \$40,000 cash, 320-acre ranch in Tulare County, near town and state highway, actual gross income since March 1, 1917, over \$15,000 for sweet cream and hogs alone. Ranch is fenced and cross-fenced with hog tight fence; 160 acres alfalfa, 90 acres leveled for corn and barley, 70 acres summer fallow; all buildings and tools new, including tractor, alfalfa chopper and grinder, corn binder, manure spreader, feed grinder, milking machine, etc. Plenty of water, 2 complete pumping plants; stock consists of 20 head draft horses, fine herd of 90 tested Holstein cows, some registered, 30 head springing heifers, over 100 head young stock, 150 head hogs; stock and tools inventory over \$30,000. There is 30 tons of alfalfa hay ready to chop and blow into barn, 2 silos filled, plenty of feed to winter all stock. Address owner, 1420 E. Eighth St., Los Angeles.

**Choice Apple Orchard in Yucaipa Valley** for sale—One of the finest tracts in the famous Yucaipa Apple District. This choice property consisting of 90 acres can be sold as a whole or in tracts to suit. It is in the very best of condition—nothing better in the valley. This season's crop, now being picked, is grading 90 per cent "Fancy." The price is \$700 per acre. Easy terms can be arranged. This is an opportunity to secure a first-class orchard "Where the Big Red Apple Grows" in the Yucaipa Valley. The varieties are Rome Beauty, King David, Delicious and Winesap. This property must be seen to be appreciated. Dike & Logie, Sales Agents, Redlands, Cal.

**NO PAYMENT DOWN**  
**FARMERS ARE MAKING GOOD IN THE "PROJECT OF NO REGRETS" AT ORLAND, CAL. WATER FURNISHED BY UNCLE SAM WE SUPPLY THE LAND AND ASK NO PAYMENT UNTIL YOU CAN MAKE SAME FROM CROPS. NO BETTER SOIL FOR ALFALFA, ALMONDS, OLIVES, ORANGES, LEMONS, ETC. WRITE US FOR U. S. GOVERNMENT REPORT, AND BOOKLET "ORLAND FARMS."**  
F. D. BURR CO.

**253 RUSS BLDG., 235 MONTGOMERY STREET, SAN FRANCISCO.**

**Lake County, California**—Climate unexcelled. We have two 160 acre ranches; both have an abundance of running water, fruit, grain, wood and pasture land. Orchards of walnut, prunes, pears, peaches, apples, berries, etc. Three room cottage, five room house, barns and out buildings. Fenced and cross fenced. Three miles to good small town, one mile to school. Price \$7,000.00 and \$7,500.00. No exchange. Terms. Address Box 71, Kelseyville, Cal.

**YUCAIPA VALLEY**  
"Where the Big Red Apple Grows"  
We are offering some of the finest unimproved apple land in California at \$285 per acre. Pure mountain water is piped under pressure to the highest point on each tract. Rich deep soil adapted to apple culture. Altitude 2400 to 3000 feet, climatic conditions unsurpassed. Terms easy. Dike & Logie, Sales Agents, Redlands, Cal.

**Oregon, California Government Lands.** Latest Green Booklet Free. Tells "How, Why, Where." Write Joseph Clark, Sacramento.

### POULTRY

**Blue Andalusian Cockerels, Blue Orpington cockerels and Ancona cockerels.** Large vigorous birds, for the shows or breeding pens. Write for prices. J. R. Huddleston, 342 Edgeware Road, Los Angeles.

**Day Old Chix**—Barred Rocks, Rhode Island Reds, Black Minorcas, Brown Leghorns, Buff and White Orpingtons. Other popular breeds a matter of correspondence. Enoch Crews, Seabright, Calif.

**Poultry Wanted**—We pay the highest market price for all the local poultry we can get, no matter how large the quantity; also fresh ranch eggs. We remit immediately. National Poultry Co., 607 E. Third St., Los Angeles, Cal.

**200-290 Egg Fall Chicks, Eggs, Stock, reasonable.** Rocks, Reds, Wyandottes, Anconas, Leghorns. C. Beeson, Pasadena, Cal.

**"Eastman's Bred-to-Lay" Barred Plymouth Rocks.** Fall chicks, eggs, cockerels. Fairmead Poultry Farm, Fairmead, Cal.

**For Sale**—Ringneck and golden pheasant females; \$1.50 each. A. R. Rideout, Whittier, Cal.

### TO LET

**To Let**—Ranch at Bakersfield for term of three to five years. Ideal for dairy; 160 acres (all level), 80 acres in alfalfa, balance in wild grass. Ample ditch water for irrigation always available. Rental (to tenant who will put in twenty additional acres of alfalfa each year), \$1200 first year, thereafter \$300 additional rental each year. Owner, 636 Wesley Roberts Building, Los Angeles.

### PATENT ATTORNEYS

**Patents that protect are secured through The PACIFIC COAST PATENT AGENCY, INC., Savings & Loan Building, Stockton, California; send for our little booklet on "PATENTS"**

**Patents**—Copyrights, trade marks and labels registered. Solicitor of American and foreign. James R. Townsend, 712 San Fernando Bldg., Los Angeles. Phones. Home A4619, Sunset Main 347.

Terra Bella is rejoicing over the arrival of water at the main reservoir of the Terra Bella Development Company's irrigation district. Much of this district will be irrigated through the use of pumps lifting to higher levels but it is stated that an abundant supply is secured for the 12,500 acres surrounding the Terra Bella section.

## Household Department

### THIS DAY

This day is yours; your work is yours.  
The odds are not who pays your hire;  
The thing accomplished—that endures.  
If it be what the days require.  
He who takes up his daily round,  
As one new armored for the fray,  
Tomorrow steps on solid ground.  
Make this a day.

The day is this; the time is now;  
No better hour was ever here—  
Who waits upon the when and how  
Remains forever in the rear.  
Though yesterday were wasted stuff,  
Your feet may still seek out the way.  
Make this a day. —Exch.

### SOME ANT EXPERIENCE

Written for California Cultivator  
By Marine Crawford

NE who considers the ways of the ever busy ant, or attempts to cope with its activity, becomes wise to the fact that human engineers, with much scientific knowledge and ingenious implements, can still be

outwitted by these small insects, some of whose methods they have doubtless imitated.

The ants' need of food for rapidly increasing numbers is so insistent that in five minutes after untiring scouts have located a supply that must look large to them, double columns of ants from a colony may be seen hastening eagerly to the rich lode and returning laden with a tiny morsel for the storehouse.

They must have locality and memory well developed to guide them back and forth, as well as marking the trail with a scent, nor do any rest from the toil while any food remains to exploit. With a community feeling they put one another on to a good thing the scouts have located as if assured of an unlimited supply for all, working together like trained soldiers with a common purpose. But if disturbed and their foraging checked by a barrier they are thrown into a panic, run over one another, each one acting for itself, giving no mutual help to escape the threatened peril, the stronger ones escaping and leaving the weaker to perish.

Their bodies, hard as sand grains, are charged with endurance, persistence and ingenuity out of proportion to their size, that no obstacles can daunt. Their life is brief and subject to many accidents against which even their wisdom cannot provide, while thousands animated by the same industrious spirit continue to pour out from the home colony to fill vacant ranks; so theirs must be a round of rapid reincarnations to afford each one experience to enable it to pass on to higher forms of life.

While respecting their ingenuity and constructive skill they were too many to share honey and sugar with even if prices of sweets were not soaring, so to preserve mine I filled a large soup plate with water strongly tintured with red pepper, set a can in the center, banded nearly to the water line with commercial paste, warranted to catch any insect and on the can was set an earthenware jar filled with sugar. This was covered with a cotton cloth pressed down with the satisfaction with which Darius Green surveyed his "flyin' machine" and said, "Now I have them."

All day scores of ants ran around the plate rim, testing the water and consulting over methods of assault. They must have smelled the sugar or they would not have wanted to cross to it. That night I slept well, free from sugar and honey worry. On entering the kitchen the next morning I looked at the moated sugar jar with satisfaction that quickly passed when I saw the cloth over the jar covered with tiny black specks moving busily, and, I fancied, humming sharply out of tune with my conception of the music of the spheres.

I looked at the band of paste around the jar and saw something so interesting that with the aid of a magnifying glass I sat down to study it. It reminded me of a thrilling description of the Turkish siege of Constantinople during which the besiegers passed over the water filled moats surrounding the city on bridges formed of the dead bodies of their hosts of fighters who perished for their religion.

The strong ant swimmers had crossed the water space only to get stuck, one by one, in the paste around the can. With a ruthless instinct, each swimmer pressing on, had run over the bodies of the stuck ones only to stick itself on the other side, thus extending a bridge of bodies across the paste band to the jar for the oncoming ones who must have regarded the previous swimming as good, even if hot, since they felt vigorous enough to tunnel through the cloth over the jar, load with sugar, pass back over the dead bridge, swim to the plate rim and hasten homeward as if their feat were common in ant annals.

### STOPPED TOO SOON

Last night's gale irresistibly calls to mind the Welsh farmer's lament in a letter to a friend: "Today we had the most awful storm. The wind blew everything off the farm except the mortgage." —London Evening Standard.

### FRUIT BUTTERS WITHOUT THE USE OF SUGAR

Written for California Cultivator  
By W. V. Cruess and J. R. Zion

WING to the high price of sugar, the making of jams from fruit becomes very expensive. It is possible, however, to make very palatable fruit jams or "butters" without the use of sugar. By utilizing surplus fruits in this way it is possible to conserve excess apples and peaches at the end of the season when the weather has become too damp and cold for successful drying in the sun. The sugar necessary for fruit butters is furnished either by grape juice or by apple cider. The grape juice or apple juice that is used should not be very sour, but should be made from very ripe fruit in order that it will have the maximum of sugar and the minimum of acid. If the fruit from which the juice is made is not thoroughly ripe the butter will be too sour to be palatable. To make a good apple butter or peach butter, etc., it is necessary to cook the product very slowly, usually taking four to six hours and also to stir the product continuously or very frequently.

The first step in the process is to concentrate the fruit juice down to about one-half its original volume. Then an equal volume of the fruit is added to the mixture and is cooked down to a heavy jam.

### Apple Butter

Boil four gallons of sweet cider down to two gallons. Peel and slice enough apples to make four gallons of sliced product. Mix the boiled cider and apples together and cook them down very slowly to a thick jam. During the cooking process about a half a teaspoon each of ground cinnamon, cloves and allspice are added to each gallon of the butter. When the butter has reached the desired consistency it should be packed boiling hot into hot sterilized jars or cans. To make sure that the product will keep the rubbers and caps should be placed on the jars and they should be set in boiling water for about ten minutes. This will sterilize them. The butter may also be kept by packing it hot into open cans or jars and sealing once with smoking hot paraffine. The product is improved if about one pound of sugar is added to each gallon of the butter, but if very sweet cider is used no sugar need be added.

Apple butter may also be made with grape juice instead of apple juice. Choose very ripe grapes. Press out the juice and concentrate to one-half the original volume by boiling. To each gallon of the concentrated juice add two gallons of sliced apples. Boil down with constant stirring to a thick jam and flavor with spices as directed above.

### "FIFTY-FIFTY BISCUITS."

Have you tried "fifty-fifty biscuits," Uncle Sam's latest idea for saving wheat flour in hot bread? You use two cups of corn meal, soy beans which can be home ground, finely crushed peanuts, or rice flour, to two cups of white flour. Or you can use one cup of corn meal and one cup of ground soy beans or crushed peanuts with the wheat product.

You can make "fifty-fifty" muffins with one and one-half cups of cooked and mashed sweet or Irish potato or cooked cereal, or ground soy beans, to an equal amount of flour. Then there are "fifty-fifty" recipes for wafers and for corn meal cookies.

How to make all these "fifty-fifties," as well as home methods for entire corn meal gems and yeast breads and rolls made in part of finely crushed peanuts, sweet or Irish potato, soy bean meal which can be made at home by grinding soy beans in a handmill, rice, corn meal or cooked cereals, are described in detail in United States Department of Agriculture Circular No. A 91, "Partial Substitutes for Wheat in Bread Making." Here is a simple recipe—the one for "fifty-fifty" biscuits:

"Fifty-Fifty Biscuits" — Two cups corn meal, ground soy beans or finely ground peanuts, rice flour or other substitute; two cups white flour, four teaspoons baking powder, two teaspoons salt, four tablespoons shortening; liquid sufficient to mix to proper

# The Cultivator Patterns

- 55—Girls' Coat. Cut in sizes 2 to 14 years. coat has a convertible collar and a one-straight gathered skirt.
- 42—Ladies' Waist. Cut in sizes 36 to 42 bust measure. The waist has plaited and a convertible collar.
- 60—Girls' Dress. Cut in sizes 4 to 14. Long or short sleeves may be used.
- 32—Ladies' House Dress. Cut in sizes 36 to 42 bust measure. The dress has a three-piece, gathered skirt.
- 50—Ladies' Dress. Cut in sizes 36 to 42 bust measure. This long-waisted dress has a five-piece skirt.
- 85—Ladies' Skirt. Cut in sizes 24 to 34 in-waist measure. The skirt is cut in three pieces.
- 47—Children's Rompers. Cut in sizes 1 and 2 years. The rompers are very simple and easy to make.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH.

## HOW TO ORDER PATTERNS

Write your name and address plainly in full, give correct number and size of each pattern you want, and add ten cents in coin or (1 or 2c) stamps for each number. In order to please our readers with the very latest New York City styles, all pattern orders are filled in New York City. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

Pattern Department  
California Cultivator  
Los Angeles

consistency (one to one and one-half cups).

Sift together the flour, meal, salt and baking powder twice. Have the shortening as cold as possible and cut it into the mixture with a knife, finally rubbing it in with the hands. Mix quickly with the cold liquid (milk, skim milk or water), forming a fairly soft dough which can be rolled on the board. Turn onto a floured board; roll into a sheet not over one-half inch thick; cut into rounds; place these in lightly floured biscuit tins (or shallow pans) and bake ten to 12 minutes in a rather hot oven. If peanuts are used, the roasted and shelled nuts should be finely crushed with a rolling pin.

In making the flour and peanut biscuits the flour and other dry ingredients should be sifted together twice and then mixed thoroughly with the crushed peanuts.

## USE MORE SKIMMILK

Skimmilk is a waste product in many farm homes and it is not appreciated by people in cities and towns as a food. Two quarts of skimmilk contain about the same amount of energy as one quart of whole milk. At the same time this amount of skimmilk contains more than twice as much body building material as the quart of whole milk. When whole milk is selling for a given price per quart, about half that price will usually buy skimmilk.

Dr. Louise Stanley of the University of Missouri college of agriculture mentions a few of the uses which can be made of skimmilk in the home. Chocolate, on account of its high fat content, can be made very acceptably from skimmilk.

Cream soups are a valuable means of using skimmilk in the dietary. These are made by a combination of skimmilk with the liquor in which a vegetable has been boiled, thickened and seasoned. Since butter is used as a seasoning, it makes up for the lack of fat. The usual procedure is to strain the vegetable, rubbing as much of the pulp through as possible. Use equal amounts of juice and milk, or more milk if the vegetable extract is sufficiently well flavored to make this possible. To each cup of total liquid, add a tablespoon of flour and one of butter. A smaller proportion of flour may be used when starchy vegetable pulp is added. Celery, cauliflower, spinach, tomato, corn, and potato—in fact any vegetable may be used in these soups.

## RISEN CORNBREAD FOR SUPPER

The spoon breads are equally good for supper and always make a substantial dish with a meat stew. When company is coming or you want to surprise the family, try risen cornbread for supper. It is not advisable to attempt it for breakfast because meal ferments so rapidly with yeast that the product is likely to be sour by morning.

One cake compressed yeast, two cups sweet milk, scalded and cooled, two tablespoons brown sugar, two tablespoons lard, two and one-half cups white cornmeal, one cup sifted flour, one teaspoon salt, two eggs well beaten. Dissolve yeast and sugar in lukewarm milk and add melted fat. Stir in the cornmeal, flour, salt and add well beaten eggs. Beat thoroughly. Fill greased bowl two-thirds full. Set to rise in a warm place for about an hour. Be careful that it does not over rise. It should be baked as soon as light. The baking will require from 20 to 30 minutes, according to thickness of pone.—U. S. Food Administration.

## SUGGESTION

Mrs. J. W. Burch of Galt writes: "I would like to say that I learn a good deal from the household department. I tried drying sweet corn in the oven and like it very much. And here's a suggestion to the department:

"Don't waste fruit peelings but cook and drain them as for jelly. Peach and pear peelings will not jelly but by adding sugar, less than for jelly, and boiling to a syrup you have something good for the table, especially good for griddle cakes."

With men, as with pebbles, when you give 'em a flop, The big ones most usually come to th' top.

# The Instant Summons

"Instant, through copse and heath, arose  
Bonnet and spears and bended bows;

\*\*\*\*\*

As if the yawning hill to heaven  
A subterranean host had given."

The whistled summons of Roderick Dhu, the hero of Scott's "Lady of the Lake," caused his Highland warriors literally to spring from the earth. Ere the echo died away, from behind bush and rock emerged the loyal and ready clansmen. In armed silence they awaited their chieftain's bidding and typified his might.

Today the Commander-in-Chief of our nation's armed forces and the resources behind them, can, by lifting the telephone receiver,

instantaneously set in motion all the vast machinery of warfare, munitions, transportation and food conservation.

Like the Scottish mountaineers, the American people must stand in loyal readiness to perform any service in furtherance of the nation's high aim. Such a spirit of co-operation and sacrificing of individual interests can alone make certain the accomplishment of the great task to which our country is committed.

Quotations by Nichols-Loomis Com- pany. Wholesale prices to growers f.o.b. L. A. carlots.	
Tame Oat	21.00@23.00
Volunteer Oat	16.00@18.00
Wheat	17.00@20.00
Barley	18.00@21.00
Alfalfa	18.00@21.00
The Alfalfa Growers' Association of Southern California writes: "The Association is now asking \$23.50 for No. 1 cow hay f. o. b. cars Los An- geles and Southern California points. The later cuttings are short and we are experiencing a shortage in our crops. Hay is selling very readily and all buy- ers are offering high prices. We have heard nothing under \$20 per ton being offered the growers for alfalfa. That price offered is of course net to the grower. We find that little hay is stored for this winter's use and that there will undoubtedly be a shortage before spring."

# Farm for Profit

## and Help U. S. Win the War

Authoritative tests have proved that as high as 50 per cent increase in  
crop production may be expected from the proper use of fertilizer. Do  
you realize what that increase means? Fertilizer is the basis of crop  
production, and compared to the prices of the crops they help to produce,  
fertilizers were never so cheap as they are today.

## MORE CROPS

will be raised in America this year than ever before. Make every acre  
you own or rent, produce to the limit. Fertilize your land—the increase  
in yield and price of crops will more than pay all the fertilizer expense—  
it will enable you to farm with profit. Don't spend your time working  
worn out land. Make it pay—Fertilize with Hauser's Organic Fertilizer.

## Citrus Fruit Market

Los Angeles, October 10, 1917.  
 Valencias are selling in the New York market all the way from \$1.85 to \$6.80. Other markets average around \$3.00. Light shipments are now being sent forward as the groves are nearly cleaned up. Predictions of the coming year's orange crop range from 4000 to 5500 cars. Tulare districts expect to begin picking early navel about the 20th of November. Shipments of navels for the Thanksgiving market will probably be very light and Valencia growers are hoping to capture most of that trade.

Lemons are bringing remarkably good prices, averaging close to \$6.00 and all offerings are taken quickly. Owing to the rest given to the lemon trees by the removal of fruit in the June hot wave growers are expecting heaviest spring and summer pickings ever known.

## WEEKLY WEATHER AND CROP REPORT

October 9, 1917.—During the forepart of the week unusually high temperatures prevailed. They averaged from 10 degrees to 11 degrees above normal in Sacramento and San Joaquin Valleys, and from five degrees to eight degrees above normal in the San Francisco Bay counties and in the Santa Clara and Salinas Valleys. In Southern California and in the coast counties north of Point Arena the temperatures averaged only slightly above normal. The highest October temperature on record occurred on the 3d, as follows: San Francisco, 96 degrees; Red Bluff, 102 degrees; San Jose, 98 degrees; San Luis Obispo, 102 degrees. At Sacramento the thermometer registered 100 degrees on the 7th, which is also the highest October temperature for that city. At Fresno maxima of 99 degrees on the 3d and 4th, which is within one degree of a record-breaking temperature. No rain fell in the principal agricultural sections.

The high temperatures and ample sunshine were very favorable for drying fruit and by the close of the week the major portion of the Muscat raisin crop in the Fresno district was safe in stack and deliveries are now being made. Some raisin grapes are still out in Kings, Tulare and other counties; but they will soon be safely secured. The hot weather was unfavorable for wine grapes, apples and tomatoes. It shrivelled the grapes and made fermentation difficult. Some apples burned on the trees and dropped before they were ripe, and tomatoes matured too rapidly. The wine grape harvest is about half finished; the apple harvest is well advanced and the canning of a fine crop of tomatoes is under good headway. Walnut and almond picking has become general and both crops are turning out if anything a little better than expected. Oranges and lemons have made normal progress.

A large crop of beans is being harvested under excellent drying conditions. The rice harvest has become general and the crop is the largest and best ever raised in California. Late potatoes have matured nicely in the northern counties and the crop will be dug within a week or two. The September rains in the north were insufficient to start much new grass and the pastures and ranges are dry. Some cattle men in Humboldt County are selling their stock as rapidly as possible because of this shortage of feed. A good crop of corn is being put into silos and the weather was very favorable for this work. The sugar beet harvest is progressing rather slowly.

Cotton picking is in full progress and the crop is turning out better than expected. The irrigation ditches in Imperial County are now running full for the first time in two months and irrigation for the next crop of barley has just begun. Labor is still scarce in several localities; but the shortage is not so acute as it was a few weeks ago. The season on the whole has been very successful for deciduous fruit, hops, cotton, beans, sugar beets, potatoes and grains of all kinds. The hot weather in June severely damaged citrus fruit; but the recovery from this damage has been better than expected.

Note — This is the last weekly bulletin of the season. Reports will be issued monthly hereafter until spring, when the weekly reports will be resumed.—E. A. Beals, district forecaster, U. S. Weather Bureau, San Francisco.

## The Only Real Non-Skid Tires

### Non-Skid on All Roads in All Seasons

IT'S the tread! And this is the period of the year when your safety and peace of mind must be assured by tires that *actually* prevent side slipping.

Fisk Non-Skid Tires give this surety on all roads.

They hold fast on hard, wet, slippery surfaces, and take a firm grip for the pull ahead on softer road beds. They are the ideal all-year-round tire.

When you buy a Fisk Non-Skid you are getting more than temporary anti-skid protection. The buttons wear—they preserve the non-skid character of the tire through month after month of usage.

There is an extraordinary amount of mileage in the buttons alone, and throughout their entire long life you

have the perfect protection which makes Fisk the safest non-skid tire you can buy.

#### Examine this illustration

The basic principle of Fisk Non-Skid protection is perfectly simple. When you understand it you will realize why the Fisk Non-Skid Tires are the only auto tires that furnish such complete protection.

Fig. 1 is the outside rib that makes an uninterrupted counter against direct side slipping or skidding—Fig. 5 is the same protection on the other side of the tread.

Fig. 2 is the outside row of buttons, connected by a second rib of solid rubber. The buttons which are slightly higher than the connecting rib, offer perfect resistance against skidding and because they grip the road so firmly, make the pull forward in soft ground ever so much more positive and certain—Fig. 4 has these identical qualities, but from the opposite directions.

Fig. 3 is the master button around which the Fisk Non-Skid tread is constructed. It supplies resistance against slipping in any direction—no matter which way there is a tendency to skid there is always a flat resisting surface to prevent that skidding, and to assist the sure forward movement of the wheel.

The Company behind the tire, its ability and eagerness to make the best product it knows how to build, the Fisk policy of insisting that users shall have full satisfaction and the product itself which embodies and justifies the policy—these explain why Fisk is the best dollar-for-dollar tire value now for the motorist.

# Actual Service Gives Leadership To Firestone SUPER CORD TIRES

**W**ITH numerous makes of cord tires contesting, the past year has witnessed the sharpest rivalry for Tire Supremacy that motordom has ever known.

In this contest the Firestone Super Cord rightly came into its acknowledged leadership, rightly because of the construction which is designed to produce strength, durability and flexible action.

The body of the Firestone Super Cord Tire is built of walls of stout cord, each cord imbedded in pure gum, no two cords ever touching to cause friction. The cushion (which is under the tread to absorb shocks and protect the inner body) is a thick layer of pure gum; the tread is tough and thick. The beads which hold the tire in the rim are specially reinforced. The sidewall is also reinforced, giving extra strength against rim-cut and raising the bending point of the tire safely high. More mileage at less cost. Users of Firestone Cord Tires are getting the highest average mileage enjoyed by car owners.

That motorists find extra values in Firestone Tires is proved by the fact that our sales increased 72 per cent this year up to September 1. Our total business this year will exceed \$60,000,000.

## New Fabric Tire Features Suggested By Success Of CORD CONSTRUCTION

### Firestone FABRIC TIRES

have benefited by every feature of cord tire construction which can be used to advantage. THICK, TOUGH TREAD gives longer surface wear. MORE RUBBER BETWEEN LAYERS. Added protection against internal friction and greater resiliency. THICK CUSHION STOCK. Still more resiliency, protection against tread separation and stone bruise. REINFORCEMENT IN SIDE WALL. Greater strength at the bead. Firestone dealers will show you a cross section of the newest output of FIRESTONE FABRIC TIRES, explaining the features that add more miles to Most Miles per Dollar.

chased and an administration and laboratory buildings erected.

Even after it was determined to secure the larger tract of land the problems presenting themselves for immediate solution were so many that Director Webber secured a lease on an orchard planted in 1891 at Arlington. This lease was secured in 1915. The orchard was badly "run down;" it was almost non-productive and considered by many not worth saving, especially in view of its quarter of a century of

the management will be enough to make this great institution of value to every department of culture which may call for its services.

In planting the citrus plot it is the idea of conducting a series of experiments. In the 65 acres of citrus trees there are alternating rows of Washington Navel, with grapefruit and Valencia—more than 140 varieties of the citrus—these so set every experimental plot will have check plot so that experiments in

Citrus Experiment Station Farm

Plot not yet planted. Administration building and laboratory at right. Only small portion of the building is shown. Barns, stables and shops in distance at left of center. Dean Webber's residence is only a step from where the camera stood in taking this picture.

service and lack of care. This orchard was divided into 48 plots, on which some 20 different experimental treatments were tried. In one plot alfalfa was planted, and this has been allowed to grow since. On others straw mulches, coarse manure mulches, different methods of irrigation, commercial fertilizer tests and other tests were made. These experiments are still being prosecuted and a full report will be made on them at the proper time.

Primarily the new station will have to deal with questions pertaining to citrus and semi-tropical fruits but, as shown in the planting of beans, potatoes and other crops, in time of need

tilization, pruning, soil improvement, plant physiology, pathology, insect control, irrigation, etc. may be conducted, with opportunity of keeping complete and perfect records. The trees for this planting were grown on the Rubidoux grounds from buds collected by A. D. Shamel of the department of agriculture.

The staff of the graduate school at the experiment station is made up of the following: Herbert J. Webber, dean; J. T. Barrett, W. P. Kelley, J. Quayle, H. S. Reed, H. S. Fawcett, L. D. Batchelor, R. S. Valle, H. Young, C. O. Smith, E. E. Thomas, W. M. Mertz, H. B. Frost, O. F. Berger, A. F. Swain.

### NURSERYMEN IN ANNUAL SESSION

Account of the gathering of the seventh annual convention of the California Association of Nurserymen held in San Jose last week is in hand, together with some of the valuable suggestions there made. Owing to a crowded paper some of the best matter must be eliminated or its publication deferred until next week. It's too good to lose. It will appear in next issue.

### FOOD SITUATION IN FRANCE

Continued from Page 395

customers, nor could the bakers and restaurants choose the mills they would buy from. Lists were made out, telling each miller to whom he could sell. This was in order that one section should not be able to eat up the stock of flour belonging to another section or one baker deprive the customers of another, when all were short.

### Wheat Situation

Let me give you the official figures on the wheat situation in France so that there can be no question.

It is estimated that there will be a deficit of approximately 5,000,000 tons of wheat in France over the period from September 7, 1917 to September 1, 1918.

The normal annual consumption of wheat in France is from 9,200,000 tons to 9,400,000 tons. France has always been an importer of wheat, her average production for several years before the war being 9,000,000 tons, or slightly less than the consumption. Since the beginning of the war her production has fallen off radically. In 1914 it was 7,700,000 tons, in 1915, 6,085,000 tons and in 1916, 5,840,000 tons, while for this year the crop is estimated at 4,000,000 tons with a possibility of rising to 4,500,000 tons, leaving for the period from September, 1917 to September, 1918 a deficit of nearly 5,000,000 tons, which must be made up by imports.

### Wheat Must Come from America

Where can those imports come from except from America? Italy by reason of her position in the Mediterranean takes the first toll from the wheat of the Far East, while England, whom the Far Eastern wheat producing countries are colonies, takes the remainder. France can get a little from South Africa. Argentina has stopped the exportation of wheat. The

**SATISFACTION  
GUARANTEED**

A. J. TOWER CO. BOSTON.

country is the only resource left to France.

I have spoken of the scarcity of flour, resulting from the shortage in wheat. Let us try to see what this means to France. In the first place it must be realized that there bread is the staple article of food. It is the base of all meals, especially among the working population. Breakfast consists of coffee or chocolate and bread. Luncheon is bread, soup, coffee and often, though not always, some meat or fish and a vegetable. The big dish is bread. Bread is again the base of dinner or supper, however the meal may be called. Bread and cheese will make an entire meal for a French peasant, with a glass of wine to wash down.

### Bread Allowance and "Bread Cards"

The French soldier's allowance of bread was a trifle over a pound and a half a day. On account of the shortage of wheat it has been necessary to cut this ration to a pound and a third a day. And it is not necessary to say that only dire necessity will countenance the cutting of the soldier's ration.

Another thing that has happened is "bread cards" in some localities. There is no national "bread card" in France as there is a "sugar card," but in some parts of the country it has been necessary to restrict the use of bread by local regulations. I have in hand several letters from my friends among the peasants of Brittany, telling of the privations they were enduring because their bread was cut down so much. Remember that bread is the chief article of diet among those people.

### France Suffers in Silence

Do not think they complained. There is no finer souled, stronger or braver people in the world than the French peasants. They are heroes among a nation of heroes. No trial at justice and right could demand and wring a complaint from Josephine Herve, one of the grandest women among a grand race. That simple peasant woman can neither read nor write, but without a word of bitterness she gave her husband to her country, and she is schooling her five sons and raising them for her country. The oldest goes to the army with the next class that is called out. When the Charlot, next to the youngest of her boys, writes for her and tells what they are enduring, there is no complaint, no bitterness. It is a simple statement of facts in plain and homely language, the story of a peasant cottage told to the child she nursed and reared.

And one cannot help her. One can lend her money, but it is not money she needs but bread.

## Legal Queries

Postmaster:

Is it lawful for a married woman to hold a post office position, be entitled to assistant post-master and Miss?—Subscriber.

No law preventing the holding of such position is known to the writer; the appellation of "Miss," "Mrs.," or "Mr." is purely one of courtesy and custom.

### Wife's Bank Deposit

What becomes of the cash a wife has in the bank at her death? There are no children.—Subscriber.

If the cash is community property, that it acquired through the earnings and savings of the husband and wife, either of them subsequent to marriage, it belongs to the husband without administration. If it is separate property of the wife, that is owned by her, or the product of property owned by her, before marriage, or acquired by gift, bequest, or devise after marriage in the above stated case, one-half goes to the husband and the other half to the parents of the wife. In the case of cash in bank under \$1000 it is unnecessary to take administration upon the estate to get the money from the bank upon receiving an affidavit stating that the depositor is dead, that the affiant is the surviving husband or wife of the decedent, that the whole amount the decedent left on deposit in any and all banks of deposit in this state does not exceed \$1000, and then pay to the affiant any deposit of the decedent not exceeding that,

and the receipt of the affiant is a sufficient acquittance to the bank for the deposit.

### SQUIRREL CAMPAIGNS

Squirrel campaigns have been started in nearly all the counties. Yolo County has just started a drive on the noxious pests and Sacramento County is making preparations. Commissioner G. H. Hecke is in receipt of a letter from W. C. Jacobsen, United States biological survey, in which he tells of the work of squirrel control. He adds: "At present we are assisting Commissioner Knowlton of Kern County and Farm Adviser Kreutzer. Next month we shall be with Commissioner Sharp of Riverside and Farm Adviser Parker. Mr. Garlough has been assisting Commissioner Van Dyke of Mendocino in the matter of gopher control."

### NURSERY LICENSES

State Horticultural Commissioner Hecke writes: "Practically every nurseryman in the state of California has received notice from the state commission of horticulture and should have secured license numbers. Out of 1200 who have received notices only 200 have so far responded. County commissioners should now notify their inspectors to hold up all shipments which do not conform to the law."

Tool sheds haven't risen in price nearly so fast as farm machinery.

Yuba-ize your farming. Make your land and your labor pay better. Plant more. A world at war needs food. Plow deeper. Utilize the fertility of the lower soil.

Yuba Ball Tread Tractors are your allies. They are strong and sturdy. They'll fight and win your battles if you'll supply the officers. They need no ambulance corps.

Yuba Ball Tread Tractors are pluggers—always on the job—day or night—in any kind of soil or weather—their evenly distributed weight does not sink, or pack the soil—their force and power shows up best at the draw bar.

### Tracover Plan Book

Build a suitable home for your Tractor. Protect it from the weather. Have a place for tools and repair work.

The Tracover Plan Book has blueprints and material list for the building. Send for a free copy.

Mechanical perfection is the other name for the Yuba Ball Tread Tractors. Built like a ho-witzer, for heavy work; they are as efficient as machine guns at lighter jobs.

Like any other machine the Yuba requires care; the more you know about mechanics the better, of course, but you'll find there are fewer break-downs, or stops, due to need for repairs, than is the case with most farm machinery. That's because the Yubas are made right in the first place.

# A Wartime Economy "Z" —the "Z" Farm Engine

The 3 and 6 H. P. successfully operate on

## KEROSENE

because they're built for kerosene—not a "converted" makeshift.

The 1½ H. P. uses gasoline only.

Same power from a gallon of kerosene as from a gallon of gasoline.

More work in less time at a low cost is true economy. That's the thought thousands of farmers had in mind when they bought their "Z"s.

You'll buy a "Z" when you do as they did—check it point by point with all other engines—especially those that are high in quality and price.

These are strong statements, doubly so, when you consider the responsibility back of the name plate.

See this sturdy engine in operation, and you'll soon have one working for you.

Buy  
It From  
Your  
Dealer

He sells the type "Z" engine and carries it in stock. Go to his store and ask him to demonstrate it to you. He will show you more quickly than we can tell you the things you want to know about it. He'll prove that it meets your idea of a real farm engine. When you buy it he'll be constantly on the alert to see that you get continuous engine service and satisfaction.

# The Sugar Beet Situation

Is the sugar beet grower getting a fair deal? If not, isn't it time that Hoover or some of the rest of us were discussing the problem as to how it can be brought about that he may? We note an article in the Artesia News written by Clarence Dougherty, a practical sugar beet farmer. From it we quote some points regarding costs of production and returns to the farmer and returns, as the farmer sees it, to the sugar factory:

The sugar beet is the king of vegetables. It is one-fifth sugar in Southern California. The part that is not sugar produces much fat when fed to dairy cattle and steers in the form of pulp, syrup and beet tops. How the cattle men are rushing the steers into the beet growing sections to finish them off! What would our dairymen do without beet pulp? California fruit growers need more sugar to promote their fruit canning and preserving. The soldiers need jams and preserves. France is begging for more sugar.

Think what an acre of sugar beets means. The average yield per acre is 14,000 pounds. The average test is 20 per cent, or one-fifth sugar. One acre of sugar beets means:

Twenty-five hundred pounds of sugar worth \$181.25.

Two hundred pounds of butter worth \$100.

Two hundred pounds of beef from the tops and syrup, \$40.

Total, \$321.25.

This year in the beet growing section and in Southern California we are short of feed and need these by-products and without them there would be just that much less of meat and fats produced. Reducing the sugar beet acreage would cripple the fruit industry by 2500 pounds of sugar for each acre of beets. An acre of wheat does not compare with an acre of beets in increasing the food supply. In actual weight an acre of wheat produces only one-third as much wheat as an acre of beets does of sugar.

To increase the acreage of beets would not affect the wheat supply as beet land is not wheat land. The beet acreage could be increased 50 per cent this year and Southern California could do no greater service than to boost the beet planting.

Now why not? The factories are getting eight or ten dollars more out of each ton of beets than before the war. Yet 30 per cent of the beet farmers will quit raising beets this year and turn to crops not one third

as efficient in feeding the war. Now what is the matter?

Here it is. Out of that eight dollars increase in the value of ton of beets the farmer receives \$1.75 and the hot dry weather has him hard. He takes 90 per cent the risks of the sugar business, why this small increase? He wishes two-thirds of the capital in the business. A thousand beet factory costs from \$600,000 million dollars as variously estimated. To keep this going for 100 days requires from 1200 to 1400 acres of land that cannot be bought for less than three hundred dollars per acre on the average or some four million dollars in the aggregate.

Three hundred men are employed daily to harvest the beets, and bring them to the factory require service of from four to five hundred horses. The aggregate wages of men have been increased as much in the factory. The cost of maintaining the horses, wagons and equipment has increased 50 per cent. After the factory has closed these or five hundred horses and four of hundred men must labor for 150 more to plant and plow and thin the hoe before the crop is laid by. Why should the farmer, contributing two-thirds of the capital and receive so small a share of the increase?

The price of wheat has been set at a minimum of \$2.00 per bushel, a fair method of grading provided, should not a minimum price on sugar beets be set and a fair method be provided by the government for the beets. The men who control the sugar business have not always failed to their desire to increase the production of sugar. They have more interested in maintaining a margin of profit. If the farmer had encouragement to promote the growth of this great industry, why not give him? The division of profits should be left to the judgment of disinterested parties.

The sugar crop in Europe has increased the production of other crops by its fertilizing value and merit as a rotation crop, yet this industry, marvelous as it is, has not grown in this country as it should.

The sugar beet is the greatest crop where it can be grown. Wheat or corn will not compare with it. It should be encouraged, not starved in the dark.

The sugar refiners will cut a good melon this fall or in the new year, but the farmers will not participate.

## Preliminary Estimate of Lettuce in Southern California

URING the shipping season of 1916-1917 the shipments of lettuce from Southern California were double those of the previous season. The most notable increase was from the Imperial Valley which shipped 27 cars in the first part of the year 1916 and 413 cars in the first part of the year 1917, with prospects of another big increase in the first part of the year 1918. On account of the freezes which did so much damage to lettuce in Florida, Texas, and the Eastern shipping sections, the Eastern markets were opened to California lettuce as never before. Lettuce was thus made for the first time the leading winter vegetable in point of quantity to move from the southern part of California. Stimulated by the big prices received last season growers are preparing to have a still larger output.

At present lettuce is shipping from Inglewood and early points around Los Angeles principally in mixed cars. The weather is warm and the shipments have been limited by a temporary shortage of solid heads. As soon as the weather develops a larger supply of good solid heads, shipments will begin to be heavy and it is expected that the Los Angeles County movements will continue to be big until the Imperial Valley product is ready. Growers are planting both in Los Angeles and Imperial sections and have already signed contracts for

delivery of a large portion of the acreage in the valley.

A preliminary estimate of acreage by districts follows. As some sections are planted to a second crop with conditions are favorable it is impossible to give acreages exactly. There is no time of year when all of the acreage is growing in the fields, but the area is continually changing. The first figure shows acreage in 1916:

### Los Angeles County

Newmark 225, 330; San Gabriel 125, 250; Tropic and Glendale 300; Santa Fe Springs 85, 120; West Adams Street 75, 75; Sawtelle 185, 2; Venice 5, 100; Inglewood 225, 3; West 48th street 90, 120; Lomita 160; Wilmington 25, 75; South Pasadena and Watts 150, 250; Eagle Rock 75; El Monte and Arcadia 50, 2; Irvingdale 2, 30; Lamanda Park 1; Pasadena 100, 150; Burnett 40, 1; Vegala 15, 75; Gardena and Montebello 45, 100; Compton 0, 50; Puente 0, 2; total 1762, 3205.

### Orange County

Fullerton 50, 300; Tustin and San Ana 3, 40.

### Packages

Lettuce is usually shipped in the pony lettuce crate, which weighs 10 pounds gross. About 310 crates are loaded per car. The average is given as 4½ to five dozen heads from Los Angeles County; 3½ to five dozen heads from Imperial Valley.

## Arlimart Corn Contest

ARLIMART, Tulare County, will hold a corn contest on Saturday, October 27. Prizes are offered for best exhibits of milo, kafir and feterita. The object of the contest as announced by the management is:

To get pointers on how to raise grain and more of it to the acre especially to gain information to the grower in making selection of corn. General informal discussion in regard to the raising of the different varieties above mentioned will be the order of the day.

Some growers say two pounds of seed per acre is enough. What do you say?

Some of the growers say 'Plow the ground and use the planter,' others, 'Use the lister.' What is your experience?

When should seed be planted? Some plant in March, some in April, some in June or July. Which is the best?

Which variety takes the least water? Which produces the most per acre? Which has the greatest feed value? Which can be harvested at the least expense? Which kind stands up the longest after it is ripe,

feeding commences at 10 a. m. Coffee will be served at noon.

## PRODUCTION OF LIMA BEANS

From reports of voluntary reporters and special inquiries concerning the crop, the bureau of crop estimates, United States department of agriculture, estimates the production of lima beans in California this year at 552,000 sacks of 80 pounds each, equivalent to 2,069,000 bushels, the standard of measure in general use by the growers.

Figured by counties, Los Angeles county is given credit for 198,000 sacks, Orange County 270,000 sacks, Diego County 60,000 sacks, Santa Clara County 72,000 sacks and Ventura County 952,000 sacks. These figures indicate a decrease in the production of lima beans compared to last year, although a slightly larger acreage was planted in 1917. The decrease in average yield per acre of lima beans is generally attributed to the late cooling, which prevented the crop being planted under the best possible conditions, thus causing a poor root development early in the season, although the extremely high temperatures prevailing in the lima bean growing sections about the middle of the season probably affected the crop to some extent.—E. E. Kaufman, bureau of crop estimates, California field station for beans, fruits and nuts.

## AULIFLOWER IN SOUTHERN CALIFORNIA

Approximately 1200 cars of cauliflower were shipped from Los Angeles during the season of 1916-17. This represented an increase of about 50 per cent over the shipments of the previous winter, according to report of G. R. Risser, assistant truck crop specialist, bureau of crop estimates. It is estimated that there are 3500 acres in the county this year. Of this 1310 acres are grown by Chinamen. The principal shipping point is Long Beach which will have about 1600 cars.

About 70 per cent of the plants have been set in the field and are growing. Shipments started in 1916 on October 25 and the heaviest movements were in November, December, January and February. This year the shipments will begin about November 15 and will begin to be heavy about December 1.

The normal yield is 400 pony crates per acre having a capacity of one dozen standard heads each and weighing 10 pounds gross. These crates are packed 500 to the car; 600 dozen crates are used per acre, hence 600 crates of this kind would be a per-acre crop or maximum yield. A car to an acre is considered heavy production and 400 crates is the quantity figured on. It is believed that if accurate records were available they would show the average crop to be considerably less than 400 crates.

Some growers pay to be suspicious whenever they find a sick hog in the herd. Pork prices are too high to take chances on hog cholera.

# PAIGE

*The Most Beautiful Car in America*

## The True Meaning of Economy

Webster defines Economy as the "wise, careful administration of our affairs."

Please note that word, wise. Also note that there is no reference to cheapness or frugality.

In this definition, you will find proof that Webster was not merely a master of the English language, but a philosopher as well.

The cheap expenditures are never the wise ones. The near-wool clothing, the "marked down" shoes and the cut price harvesting machinery cost less to be sure—in the beginning.

But cheap clothing shrinks to boy's size in the first spring shower. The cheap shoes "wear out" after a few months of service and the cheap harvesting machinery fails you at the critical moments. So—in the long run—your cheap purchases become shockingly expensive.

And so it is with a motor car.

There are many cars that sell for less money than the Paige. We could readily build them ourselves if we considered that policy the best one. But we don't.

We firmly believe that Self-Respect, Comfort and Enduring Satisfaction have an actual market value. So we build those things into our product.

We take just a little more time—just a little more care in selecting materials—just a little more pride in our work. And the result is a real motor car—not a makeshift or compromise.

Unless we are greatly mistaken, the Paige "Six-39" is just the kind of car that you want. It costs \$1330 and it is worth every penny of the price.

If you are truly Economical—truly wise and careful—it will be the car of your choice.

Essex "Six-55" 7-passenger \$1775; Brooklands 4-passenger \$1795; Linwood "Six-39" 5-passenger \$1330; Glendale "Six-39" Chummy Roadster \$1330; Dartmoor "Six-39" 2 or 3-passenger \$1330. All Prices f. o. b. Detroit. No handsomer line of enclosed vehicles can be found on the market.

## OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertiser in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

## THIS WEEK'S COVER

A milestone in California's agricultural history was passed last Saturday when the new structure, Hilgard Hall, was dedicated "To Rescue for Human Society the Native Values of Rural Life." It was a notable occasion calling together some of California's brightest and best people. The Cultivator camera was brought into action as Hon. W. M. Newhall, president of the Stanford University trustees, was making the opening address. The setting in the grove of magnificent eucalyptus trees, with Hilgard Hall and Agricultural Hall in the background, made it a scene long to be remembered. The new building far more than doubles the housing facilities of the agricultural college of the university, and, excepting that the attendance at the college has been much decreased by the demands of war, the coming year of the agricultural department promises greatest value to California.

## NURSERYMEN'S CONVENTION

We were at the convention of nurserymen. There was a fund of information developed which is of interest to orchardists as well. We have the information ready to pass on to our readers but find at the last moment that it must be greatly reduced or held over until another week. It is too valuable to eliminate. We hope our readers will pardon this delay in its appearance in the Cultivator for it will be equally good a week later.

## GOING UP

Publishers are laboring with the question of the H. C. of L. as few others. To be personal, it is some problem with the Cultivator these

days, but this is not to speak of that, but of one of the most valuable books which has to do with the livestock industry, "Feeds and Feeding" published by Henry and Morrison, regarding which they write that they have held prices down as long as possible and now find it necessary to raise from the old \$2.25 price to \$2.50. The Cultivator will receive orders at the advanced price.

## MORE HONORS

Less than a year ago California live stock people were highly elated over the winnings of the division of animal husbandry of the University of California at the great International Livestock Show at Chicago. California Favorite and Jock sent back word as to the honors they had carried away under the direction of Prof. Gordon H. True. Both proved champions which attracted the attention of the world. Now comes from the National Swine Show at Omaha news which appears on page 410, with photos of two Californians, Rookwood

ly a higher price than this is being made, that is 21½ cents f. o. b. Eastern points—this because of certain freight complications which induced the shippers to hold the nuts entirely under their own control until delivery to the consumer.

The crop will be large, though it has been materially lessened from expectations of the earlier season. The hot weather of mid-June, with occasional mild attacks of blight, has resulted in this reduced production, and in larger percentage of small sizes. It is estimated that the walnut crop will bring to California about \$6,000,000. The crop of France, our principal competitor, will be 40 per cent below normal.

## PRODUCING MORE

The article on third page of this issue makes most graphic the situation confronting the people of France. If not actually suffering from hunger, at least it is shown in this article and two others to follow that the French people are having little of the luxur-

## SECOND LIBERTY LOAN

The first liberty loan was offered May 14, 1917. It consisted of \$2,000,000,000, three and a half per cent United States bonds maturing in 30 years. The second liberty loan was offered October 1. It consisted of \$3,000,000,000, four per cent United States bonds maturing in 25 years. The first offering was oversubscribed 50 per cent. The second should be supported with equal enthusiasm.

This is not in any sense a contribution or donation to the government; it is an investment in the best security in the world, paying four per cent interest to the investor.

Have you done your part? The three billions if apportioned equally to every man, woman and child in the United States would average \$30. Let every American do his share. All Europe, especially central Europe, is watching the American people. Germany knows we are a people of varied opinions. We should show that we are united in this one thing, at least, the support of the American armies in the great war. Germany should not be permitted to count on our apathy to help her win.

Lady and Baron Duke who have been declared grand champions. These animals are both from the herd of F. A. Brush. Prof. J. I. Thompson who was present at the show writes the article.

California has been a world beater in fruits; now come great honors to her animal industry.

## MORE SUGAR

With guaranteed price for wheat and some other products of the earth the question has been propounded as to whether it is not a good idea to encourage greater sugar production by giving to sugar beet growers some guarantee or assurance of what they may receive. The beet growers are in no very pleasant frame of mind as the harvest season ends, notwithstanding many statements which have been given to the press as to what the factories were willing to pay this year. The published price has been, as a rule, fairly good, but when the grower takes his load of beets to the factory—which analysis by agricultural chemists has shown contain about 20 per cent sugar—and is paid on a 12½ cent basis, he naturally feels peeved. Herein is opportunity for federal or state aid. In lieu of that the one hope for the producer is cooperation and competent inspection of his own.

## HIGHEST EVER

Carload lots of the best brand of budded walnuts cannot be purchased today for less than 24 cents per pound. This is the highest price ever made on California walnuts and was fixed October 1 by the California Walnut Growers' Association. It is considerably more than double the price of three or four years ago. Number 1 Softshells will sell on a basis of 20 cents, f. o. b. Los Angeles, but real-

ies of life and are even suffering for need of some staples. These articles should aid California producers to appreciate the situation and the necessity for exerting themselves to the utmost.

It was our pleasure recently to have conversation with H. B. Humphrey, cereal pathologist of the bureau of plant industry of the department of agriculture, when he referred to his mission in California, which is to induce Californians to prevent some of the losses which now occur because of lack of attention to diseases of grains which are easily preventable. From one disease, preventable smut, the country is losing in excess of \$20,000,000 yearly. Besides, there is a dockage loss in millers' prices which probably exceeds \$10,000,000. This is an especially serious loss in California and yet wheat and barley producers go on growing smut because of unwillingness to spend four cents per acre to treat the seed, which would prevent practically all of the smut infection.

In a word, the treatment consists in dipping a sack only half filled with the grain, tied at the top, lifting the sack so that it may be worked back and fourth in the solution of one pound of formaldehyde to 40 gallons of water, leaving the grain in the dip for ten minutes, occasionally shifting as noted above. The sack may be hung up until the grain dries, or the grain may be dried in piles on the floor, at intervals shoveling to permit all the grain to dry out. So simple is this treatment and the expense so near to nothing that it is a wonder grain growers do not dip every bit of grain sown.

California's 6,000,000 bushels of wheat looks exceedingly small beside Kansas' 123,000,000 bushels, and this never will be a grain state in the sense that it will be much of a factor in the wheat supply, but as far as possible at this time California grain growers should produce to the limit.

## Agricultural News Notes

Parcel post service to Greece has been discontinued owing to war conditions.

As a part of our war tax letters now carry three cents postage; cards, one cent.

All shipments of coal to California from lake ports have been forbidden by Fuel Administrator Garfield.

The transportation situation is so serious and the bureau of markets urging heavier loading of grain cars.

Sweden has passed a law regulating all supplies of milk. Hereafter will be sold only on coupons issued by the government.

Under the provisions of the war income tax bill tax is levied on incomes over \$2000 for married sons, over \$1000 for unmarried.

The present English law allows government to take possession of farm land that is not being cultivated so as to increase, so far as practicable, the food supply.

The food administration has named the coming week Food Pledge Week and all housekeepers in the United States will be asked to sign the pledge making them members of the food administration.

Liberty bonds of the second issue are now on sale. They bear four per cent interest and are exempt from local and state taxes and all federal taxes except to those whose incomes are over \$5000 yearly.

The post office department expects that congress will soon be asked to turn over to the delivery service the post office department all military air planes and motor trucks which found unsuitable for army use.

Food Administrator Hoover is making experiments in Philadelphia in production of a five cent loaf of bread. It is proposed to establish a standard war loaf which will effect a saving in sugar, lard and milk and yet be wholesome.

A guaranteed minimum price for hogs to stimulate production was offered on the government as the strongest safeguard against a meat famine next year at the meeting of swine breeders of six states recently held at Waterloo, Iowa.

Food price manipulators and profiteers will have the trained men and resources of the secret service to combat them. Herbert Hoover, the food administrator, has asked President Wilson for the service of the corps, and it has been granted.

October 26 is Arbor Day in Pennsylvania. The state highway commissioner urges all people of the state to plant trees along the highway on that day. Cherry and apple trees are the favored varieties for this highway planting.

The policy of the government is now to encourage visitors to the national forests in the belief that the building of trails and use of the forests will do much to protect them from fire. During the past season it is estimated that a million travelers, campers and sportsmen visited the national forests in California.

M. H. Houser, federal grain commissioner for the Northwest, announced that he has received confirmation of reports that large quantities of Australian wheat are being shipped here. "The Australian wheat," Mr. Houser said, "will be available for milling here, and this will release a corresponding amount of Northwest wheat for shipment overland to Chicago."

# Agricultural News Notes of the Pacific Coast

## Northern California

Yuba grape buyers are paying a ton.

The almond crop of Sutter County is exceptionally light this year.

Yarysville has been selected as the distributing post office for all Yuba county mail.

Creameries of Mendocino County are sending exhibits to the land show in San Francisco.

M. Gates of Vacaville has been appointed horticultural commissioner of Solano County.

Farmers of Anderson Valley, Shasta county, met at Anderson October 6 to organize a local farm bureau.

Preparations are being made for the fruit growers convention to be held at Sacramento, November 21-24.

A meeting of Jersey breeders was held at Lockeford, October 7 for the purpose of bringing new members into the Milk Producers' Association.

A county farm bureau campaign has been started in Sutter County and a committee has been appointed to carry on local organization work.

The Sebastopol Berry Growers have secured for its growers \$142 a ton for sweet berries. The association shipped 16,627 crates of berries to Eastern markets.

Wheat growers of the Greenville section of Plumas County report one of the largest crops in years. Oats are giving a good crop and are of high quality.

The war department has requisitioned 250 carloads of prunes from the California Prune Growers' Association. These will be shipped to France for use of our soldiers.

There was an exceptionally fine exhibit of agricultural products at the Yolo County fair at Woodland last week. The exhibits were in charge of the Yolo County farm bureau.

A campaign against gophers has been started among farmers of the Arena district of Mendocino County at the instigation of County Horticultural Commissioner Van Dyke.

At the suggestion of the state fish and game commission the geese and ducks which ravage the rice fields are being fought with gas bombs night and morning for three days, when the marauders give up and don't come back.

An experiment is being made on a ranch near Chico, Butte County, in the growing of Korean winter rice. It is stated that this rice has been seen growing through one-fourth of an inch of ice. It is planted in late fall and harvested in July.

## Central California

The recent warm weather has colored up the oranges in the Lindsay district.

T. C. Mayhew, farm adviser of Madera County, has been granted a leave of absence of one year.

The Peach Growers' Association has completed its warehouse at Kingsburg at a cost of \$21,000.

Over 90 per cent of the dairymen in the Fresno district have joined the San Joaquin Valley Milk Producers' Association.

September price of butterfat at the Danish creameries in Fresno County was fixed at 52 cents. This eclipses all previous prices.

J. M. Bomberger of Modesto has been appointed a member of the agricultural production board, a branch of the food administration commission.

The Merced County council of defense passed a resolution offering assistance to drafted men in the settlement of business and harvesting of crops.

Visalia has determined not to hold a citrus fair this year. General conditions caused by the war and in addition the torn up highways are given as the reasons.

California's biggest raisin crop, 150,000 tons valued at \$15,000,000, is being hauled to packing sheds and some shipments have already gone forward to Eastern markets.

The agricultural club of the Kernan high school sold \$2200 worth of registered Poland-Chinas and Duroc-Jerseys at an auction sale held Saturday, October 6. The highest price paid for a brood sow was \$90.

The Ahwahnee farm loan association which was formed nine months ago has just secured checks from the bank at Berkeley for three loans. These are said to be the first loans granted by the bank in Madera County.

Dairymen of San Joaquin County have organized the San Joaquin Valley Milk Producers' Association, affiliating with the California State Association of Dairymen. The newly formed association proposes to market products of its members, eliminating speculators.

Dr. Chas. Keane, state veterinarian, is warning farmers against a gang of fake veterinarians who have been conducting operations under the guise of deputy state veterinarians, securing fees for so-called tests of tuberculosis, whereas the state veterinarian does this work free of charge.

## Southern California

Five dead is the toll of the Sespe forest fire.

Egyptian cotton is quoted at one dollar a pound.

Yucaipa will hold its Southern California Apple Show November 1-4.

The Riverside Fair, "biggest south of Tehachapi," is drawing big crowds this week.

Practically all of Southern California's walnut crop has been disposed of at the biggest price ever.

A public market is to be opened at Camp Kearny near San Diego, where farmers may take their produce.

A meeting was held at San Bernardino, October 19, to take further steps toward organizing the citrus growers of that county.

Yucaipa apple growers are getting remarkably good crops considering the damage done by extremely hot weather of early summer.

Bean growers of Ventura County have been favored with the best of harvesting weather. Most of the crop is safe in the warehouses.

El Cajon Valley, San Diego County, has sent out its record shipment of green grapes this year, 109 carloads in all. This does not include express and truck shipments.

The annual meeting of the stockholders of the San Fernando Fruit Growers' Association showed a total business for the year of 212,000. Directors for the coming year reelected are: B. F. Wolff, F. D. Parker, V. H. Craig, Mrs. E. M. Craig, H. E. Fox, G. W. Vaughan, A. H. Dexter.

Orange County producers find themselves in need of a harbor and shipping facilities of their own, and in order to secure one various chambers of commerce are petitioning the board of supervisors to call a bond election to secure a fund for the improvement of Newport harbor.

The farm adviser of San Bernardino County announces schedule of meetings for the remainder of October: 22, San Bernardino; 24, Daggett at Barstow; 26, Apple Valley and Lucerne Valley at Apple Valley; 29, Colton; 31, Bloomington.

Chino had a mass meeting and unanimously resolved "that all persons contemplating the giving of expensive Christmas presents to their loved ones at home, be earnestly requested to use the money, so intended to be spent, in the purchase of Liberty Bonds, to the end that those most in need, our government and our soldiers, be better provided for."

## The Coast

Apple waste from vinegar factories is to be converted into stock feed.

Apple buyers from Australia and Cuba are in the Wenatchee district of Washington.

The cannery at Lynden, Washington, handled 300,000 pounds of raspberries this season.

A particular feature of the Arizona state fair at Phoenix is the large attention paid to work of boys and girls clubs.

The Pacific International Livestock Show will be held in Portland, November 19-24. Fat stock only will be shown.

The Polk County Cooperative Warehouse Company, composed chiefly of farmers, has opened a warehouse at Dallas, Oregon.

Pasturage in Tillamook County has been severely cut down by the dry summer. It also affected the potato and bean crops.

There will be extensive exhibits of farm crops and dairy products at the Manufacturers and Land Products' Show held in Portland, November 3-24.

Examinations for forest rangers will be held on October 29 at all forest headquarters in New Mexico and Arizona. A large new force of foresters is needed.

Over \$25,000 in cash prizes will be paid to prize winners at the Arizona state fair to be held at Phoenix, November 12-17.

The federal farm loan bank at Spokane, which serves the Northwestern states, has already placed in the hands of the farmers a little more than \$2,550,000.

County Agent J. L. Smith of Coos County, Oregon, has been appointed by the war department to take a survey of the food and implement resources of that county.

In the recent motorcade trips made by farmers of Cochise County, Arizona, more than 1000 farmers participated. Visits were made to bean, melon and other ranches where successful methods of culture were pointed out by the county agent who was conducting the trips.

Announcement made in Salt Lake by Directors of the Utah-Idaho Sugar Company that the company will offer a profit-sharing contract for 1918 crop is expected to result in doubling the beet acreage in the Yakima Valley next year. Under the terms of the offer growers will get \$7.00 a ton for beets containing 15 per cent of sugar and share in profits over a certain amount.

Putting Their Heads Together

Two young Durocs, junior champion sow and boar at Riverside fair, owned by Alford Farm. They were sired by Peters, Lamson and Walker's grand champion boar, Grand Golden Model.

## Breed Leaders

Every breed of livestock has its outstanding character the same as the huma  
kind. A great dairy cow has proved her ability to produce anywhere up to 15 tons  
milk annually; the trotting horse has secured his record around two minutes; th  
beefmaker has shown his ability to make the least amount of feed into the great  
amount of food; swine, sheep and others of the livestock family have shown the  
selves great characters. In addition—and here is where their worth is proven—the  
animals can transmit their productive power to their offspring.

Beginning with the issue of August 4 the Cultivator gave an account of Pietert  
Bloom of the university farm dairy herd. Some things she has done and more the  
her daughters have done were chronicled. She was a most worthy leader in th  
series of articles. Others of her kind follow. More of the "handsome is as handsom  
does" type of animals will be given in the columns of the Cultivator during the nex  
few months.

Written for California Cultivator By C. B. Cunningham

### BILLIKEN

**BILLIKEN**, 37567, was far-  
rowed September 2, 1915.  
His sire was Wm. A., 26-  
161; his dam, Elmo's Pride,  
62496. If ancestry counts  
for anything, if the individual merits  
of ancestors are of any value; if blood  
will tell; then Billiken is entitled to  
everything claimed for him.

His sire, Wm. A., was grand cham-  
pion boar at the National Swine Show

of Wonder, Combination, Chickasaw  
Chief, St. Elmo, Juanita and Lenor  
mean much to the Chester breeder  
who know their families.

Billiken is a great individual; first  
shown at the 1916 state fair, he wa  
easily first as a senior pig. In th  
showing at the 1917 state fair, he wa  
first in his class as a senior yearling;  
senior champion and grand champion.  
A son was junior champion and re-  
serve grand champion, while a daugh-

"Billiken" 37567

held at Omaha in 1916. He also won  
first on get of sire, and a son of Wm.  
A. was junior champion and reserve  
grand champion. Wm. A. was also  
grand champion boar at the various  
state fairs where he was shown. He  
traces directly back to the old Won-  
der, the most famous boar of the  
Chester breed. His dam, Elmo's  
Pride was a two times grand cham-  
pion at the Sioux City, Interstate  
Fairs. She traces back to Chickasaw  
Chief on the sire's side and to St.  
Elmo on the dam's side. The names

ter was junior champion and gran  
champion. Billiken also was first o  
get of sire. He certainly is transmi  
ting his good qualities to his offsprin  
and I feel assured that he will leav  
his mark of quality on the Chester  
White breed in this state. With th  
ancestry back of him, each one po  
singing the merit and quality th  
made them the best at their respec  
tive periods of life, it makes him th  
animal that he is and gives the a

good qualities to his get

## Southern California Duroc-Jersey Breeders Hold Enthusiastic Meeting at Riverside

Written for California Cultivator

**S**OUNDING the keynote of co-  
operation in the advance-  
ment of the breed in this  
section of the state, discus-  
ing the selling, breeding  
and advertising features of the busi-  
ness, the recently formed Duroc-Jer-  
sey Breeders' Association held a most  
interesting meeting at the Reynolds  
Hotel, Riverside during the fair, Wed-  
nesday, October 11.

J. S. Prendergast was elected presi-  
dent, H. S. White, vice-president, and  
R. K. Walker, secretary.

Fifteen enthusiastic young breed-  
ers talked over these important mat-  
ters for five hours and accomplished  
a great deal in that short space of  
time.

Walter Gatton spoke on the subject  
of type and the desirable points of  
the show hog.

Dr. L. M. Hurt made an interesting  
talk on the importance of immuniza-  
tion of hogs for the prevention of chol-  
era. Dozens of questions were fired  
at the expert, and he supplied a fund  
of valuable information which stamps  
him as one who knows what he is  
talking about. He advocated the  
serum alone treatment for pigs up to  
50 pounds weight, and the double  
treatment when they reached 80  
pounds. The cost per pig for both  
treatments approximates \$1.25, sure-  
ly a small item of insurance.

Mr. Peters, president of the firm  
of Peters, Lamson and Walker, read  
a fine paper on the methods practiced

on their ranch in the feeding and  
breeding of pure breeds from birth  
maturity. He laid particular stress  
on the necessity of instructing pu-  
chasers of breeding animals as to th  
proper method of feeding to attain  
maximum growth. Space does not  
permit going into detail about th  
many valuable questions discusse  
The meeting was an inspiration to th  
young breeders present, and if th  
carry out the plan of holding his  
class consignment sales, exhibit the  
herds collectively at the differ  
shows ever year, and push the bree  
along the lines laid out success  
bound to come.

At the close of the meeting a p  
per from the pen of J. I. Thompson  
formerly of the animal husbandry d  
partment at Davis, but now located  
Kansas experiment station, was read  
and it contains so much matter o  
value to every hog breeder in Califor-  
nia that we print it word for word.  
It shows that Professor Thompson r  
tains an active interest in Californ  
hog matters, and the breeders fe  
that they are indeed fortunate i  
having a man of his ability and cha-  
acter located in the Middle West  
where he can and has been doing  
them a world of good. A vote o  
thanks was sent him by telegram. Th  
paper and contents follow:

"Will give you, in brief, some of th  
things I have noted while I have bee  
in this region. I attended the low  
state fair where 882 Durocs were

**Blacklegoids**

NO DOSE TO MEASURE.  
NO LIQUID TO SPILL.  
NO STING TO BLOT.

BLACKLEGGOIDS are small pills. Each pill is an accurate dose of blackleg vaccine.

BLACKLEGGOIDS are easily administered—simply inject them under the skin with a vaccine injector.

**TAKE NO CHANCES.**

Don't wait until your calves become infected. This means certain loss—there is no cure for blackleg. Vaccinate now—before the deadly disease shows itself.

**THE COST IS SMALL.**

BLACKLEGGOIDS are economical. The expense is trifling compared with the loss you are liable to sustain if you do not use them.

ORDER THROUGH YOUR VETERINARIAN OR DRUGGIST.

Better service is assured by the advertiser if when writing you mention the California Cultivator.

shown, and it was a wonderful show. To me one of the most interesting features was the regularity with which new, relatively small breeders slipped into the prize list. The second prize junior yearling boar was bred by a farmer and sold to Waltmeyer's for the small sum of \$2500. Duroc breeders here are laying unusual emphasis on size; they must be big in order to win. Allow me to suggest, however, that your association take special pains to see that this 'size' business is not overdone. Size is important in all classes of livestock, but it alone is not sufficient. A hog must still be a hog, even though he is big. Unusually heavy lumpy ears, coarse shoulders, a low back, slack heart girth, droopy rump, crooked legs and weak feet and pasterns are not to be overlooked simply because an animal happens to be big.

"There is probably no better way to learn more about Durocs and the Duroc business than to study the other breeds. You all know that the Poland-China here in the Corn Belt is admittedly the biggest breed, referring to size of hog only. Last week at auction in an honest to goodness, on the square sale, a boar sold for \$6600. Here are the two interesting features about him: First: He was bred by a small farmer who has not more than eight or nine brood sows. Second: He is not the biggest boar of the breed by a good deal, but is a real hog, with abundance of quality for his size, and a real, wide, deep meaty chap. That is the type that the Duroc men will want and must have to hold the territory already acquired and expand into new fields as they should.

"I attended a number of Duroc sales and the interest shown was a surprise to me. In all cases the bidding was lively and prices ran as high as \$1500. One sale averaged \$187. One thing that would probably surprise many of you is that most of the more prominent breeders do not keep over 30 brood sows and many of the very best breeders keep only 12 or 15 sows, but they are good ones. Each year, perhaps one, two or three gilts are kept to replace as many older sows that have passed their usefulness, but I noticed two or three men that had one or two sows six and seven years old that could not be bought at any price. Feed has been very high here, higher even than in California, but the good breeders do not seem to hesitate. They are breeding their regular number of sows and do not seem to be concerned about the high priced feed, evidently convinced beyond a doubt that their hogs will return them as much or more for the grain as the market offers.

"Breeding stock is unusually high. I recently paid \$250 for a Duroc boar for the University of California, that I could have readily bought last year for \$125. But, understand that it is the good ones, the real tops that sell high, at \$187 averages; the ordinary ones go to the butcher.

"I hope to see auction sales, square, reliable auction sales, become more numerous in California. Several of the best breeders here will not sell you a single hog at private sale. All of the best ones are sold at auction, the rest go to market. And these same breeders' sales are models. No by-bidding, no unfair jockeying; just plain, square, honest selling, the hogs backed by a guarantee that is a real guarantee. That they are the kind of sales that they should be is evidenced by the fact that a number of the same buyers return each year to acquire what they want. This, it seems to me is one of the things your association can encourage. When one man has too few hogs for a sale, two or more can combine or the association can handle them. I know that it may be missionary work for awhile but it's bound to come.

"Devise means to reach the new breeders if possible and encourage them to buy one or two good pure bred sows. By all means do not let them start with too many. If the association can help them to dispose of their first surplus stock it will be doing a wonderful work, for simply raising good pure breeds is only half the business; they must be well sold in order to make the proposition worth while. Study the breeding of the more prominent hogs, especially the boars. When one or more members need a new cross, if the other members do not have what he needs, and if such blood is not to be found in the

# A Guaranty Consignment

At the California Breeders' Holstein Sale at Sacramento, October 30-31. We are making a "guaranty" consignment consisting of 16 heifers—12 of them are in calf to our herd bulls; 9 of these heifers are in calf to our own famous sire "It," the "Premier Sire of the West." The young bull we are consigning is a grandson of King Korndyke Sadie Vale out of a 29 pound three year old daughter of King Segis Pontiac, her next dam is a 28 pound daughter of King of the Pontiacs. You can't beat this breeding.

**WE GUARANTEE VALUE RECEIVED**

because we offer to buy every calf sired by our famous herd sire "It" at five months of age at the price the dam brings in the sale. This is an extraordinary offer but we are glad to do so to demonstrate our unlimited confidence in the future of "It." We will make money on calves we are lucky enough to buy on these terms.

**The Calves Sired by "IT" will be Worth more than their Dams will sell for at this Sale.**

**WE GUARANTEE HEALTH**

We guarantee every animal over six months of age to be free from tuberculosis and not to react to the tuberculin test within 60 days after the day of the sale—subject to the conditions covering the same guarantee of the Holstein Breeders' Guaranty Sale, December 5. This is the most liberal guarantee we have ever seen and one which should be appreciated by the buyer. We offer to you at the

**Sacramento Sale, October 30, 31**

quality—sound cattle and value received and more—a great speculation. Be there and buy!

**McAlister & Sons**  
CHINO - - CALIFORNIA

## Elliott-Brant Rancho Guernseys Are Persistent Producers

The results of our first two years of official testing show our herd to average 10,172.28 Pounds of Milk and 507.97 Pounds of Fat. One half of these cows were heifers with first calf who averaged 8,670.24 Pounds of Milk and 436.01 Pounds of Fat (only seven pounds under the average of all A. R. records). Our mature cows averaged 12,710.5 Pounds of Milk and 621.52 Pounds of Fat (120 pounds over the average of the mature cows of the breed).

A bull from these cows will increase the production of almost any herd.

**Elliott-Brant Rancho, - Owensmouth, Cal.**

state, you will know better where to go to get what you want.

"Hold meetings occasionally where various topics can be discussed; particularly feeding. Remember that the University of California wants to help you as much as it can. Their only way of knowing when you want help, however, is for you to ask for it.

"The National Swine Show comes next week at Omaha. I wish each and every one of you could be there. If I return to California next year, one of the things I am going to ask of your association is, "how many round trip

tickets do you want for Omaha at \$60 each.

"The university will run a "Bacon Special" train in November, carrying pigs from an experiment designed to throw some light on how much grain to feed in conjunction with alfalfa at present high prices. If you think the results would interest your association, write the Animal Husbandry Division at Davis, telling them where you would like to have the train stop in your territory. You have my best wishes for the continued success of your association."

## Riverside Has Best Fair and Livestock Show on Record

Written for California Cultivator By F. F. Stonerod

**A**DVERTISED as a real old fashioned county fair the Riverside show this year surprised the visitors by being right up to the minute in its high class amusement features, and best of all the number and quality of its livestock.

If exhibitors of other years were unable to be present their places were taken by new showmen, and with few

year. He won first in his class and then captured grand champion honors. He is long and deep, a beautiful head and top line, exceptional rudimentaries well placed and handles nicely considering that he had very little care previous to the fair.

Stalder won first and senior champion bull on King Pontiac Netherland Segis 3rd and senior and grand champion cow on Meadow Holland Nudine,

First Junior Yearling and Grand Champion Duroc Sow  
Model Defender Lady, owned by Peters, Lamson and Walker

exceptions the stalls were occupied by a splendid array of cattle, horses, sheep, goats and swine.

The crowds marveled and admired the Shorthorn exhibit of T. T. Miller and F. L. Hall. Miller's entry just came down the circuit loaded down with blue and purple ribbons, and as his herd is a hard one to beat in any company this year Mr. Hall had reason to be proud of the prizes he won. He was particularly strong in the young stuff, graded herds, and got in the money in the aged classes occasionally.

Brandsby's Jinny, the great import-

a cow of outstanding merit and one of great promise as a producer. This cow should have been shown at the state fair. She had a close competitor for the big prize in another Stalder female, the beautiful junior calf, Abbekerk Pontiac, one of the sweetest things in the entire show. This heifer won first in class and junior champion. Most of the herds and the bulk of the firsts went to the Rosamines entry.

There were but three Jersey exhibitors but they brought out some high class stock. J. E. Wherrel carried off the lion's share of the prizes, includ-

Winner of Blue and Junior Grand Champion  
Abbekerk Pontiac 371114, calved April, 1917, owned by Stalder Bros.

ed cow, came into her own at last by winning the grand championship. White Mayflower was an easy winner again although she was not looking as smooth as at Sacramento. The rigors of the California fair circuit are commencing to tell on the animals.

Rosamines Rancho made a crackerjack exhibit of Holsteins. This herd is owned by Stalder Bros., and their string reached half way down the long barn. Delta Farm and Live Stock Company and the George Junior Republic were new exhibitors. In Dictor Spofford Korndyke Lad 5th this school has one of the best junior yearling bulls in the show yards this

ing grand champion bull and female. W. P. McClasky and Geo. W. Thomas and Son had some nice ones out. Mr. Wherrel's champion cow was Beauty of Walnut Park, a solid fawn type individual with great capacity and quality. The bull is an Oxford bred dark Ireland type sire named Rloter of Willowood. Most of these Jerseys are from the shipment brought out last year by "Jersey" Roberts, and Southern California certainly got a nice lot of cattle and distributed them among the right kind of breeders when this shipment arrived.

The swine division was probably the biggest single feature of the show

### KENDALL'S SPAVIN TREATMENT

The old reliable remedy for curb, splint, bony growths, ringbone, spavin or other lamenesses. 40 years of remarkable results. \$1 a bottle, 4 for \$5. At all drug stores. Ask for Free Book, "Treatment on the Horse." Dr. D. J. Kendall Co., Rosburg, Va., Va.

because there was keener competition, especially in Duroc-Jerseys. Berkshires, Hampshires, Tamworths, and Poland-Chinas were shown, but competition in these breeds was very limited except in the Berkshires. If the pace set by the energetic body of Duroc breeders in this section is continued the other breeders will have to hustle to keep in the van. There were seven exhibitors in the Duroc class, and right here be it said that the junior yearling and grand champion sow, the junior champion sow and boar will compare favorably with any competitor we have seen at any of this fall's shows. The breeders in this section have fortunately gotten into a strain of big type smooth stuff that carries enormous scale and carries it easily. Peters, Lamson and Walker, and Falfadale Farms fought it out in most of the classes although they did not have things entirely to themselves. Jos. S. Prendergast showed a dandy aged boar and some classy young stuff. Delta Farm and Live Stock Company had a few nice ones on deck. W. M. Taylor, a young breeder of great promise, brought down some nice ones from his ranch in San Bernardino County. The Fontana Land Company had a nice young herd although this big concern is more in the market hog business than in the show class, that is they have not maintained a regular show herd.

P. L. and W. Company has a Waltmeyer bred junior yearling sow that is a dream. Smooth as an apple all over, carries out uniformly from shoulder to hain, of great depth and length. Her hams running clear to the hock bone, she scales full 600 pounds and has had a fine litter of nine pigs and raised them all. She is Gold Model bred on both sides and is championship timber in any show yard in the country. She has a litter sister that is about 99 per cent as good as she is—the pair certainly make a picture.

The Falfadale entry shown by B. H. Wilkinson was strictly high class. He won eight firsts, three seconds, one third and two championships, and this was Mr. Wilkinson's first show. Young herd, get of sire, produce of dam, and breeders young herd all went into the Falfadale maw. The under six months boar pig, G. and W's. Grand Model, and the same age sow pig, Bonnie Jean, both sired by Peters, Lamson and Walker's grand champion boar, Golden Model, won first in their class and then got the coveted purple in the junior championships. Peters, Lamson and Walker also won the silver trophy offered by the Duroc-Jersey Association for the best litter farrowed after March 1, 1917.

Fontana got first on under year boar and third on junior yearling sow. Taylor won second on young herd, third on produce of dam, third on get, and third on young herd. The other exhibitors had only a few head entered as they are just starting in the business. Enthusiasm ran high and it is safe to say that all these 1917 exhibitors will be out next year and will bring some new ones with them.

Llano Vista showed their world's champion herd of Hampshires, and the exhibit attracted wide attention. Sioux Queen, the sow who won grand champion at San Francisco, was returned a winner again. This remarkable sow has farrowed three litters since the exposition, the last one of 13 pigs, and she raised 12 of these. At four years of age she is a rare example of the combination of a great breeding animal and a show sow. Roy Dawson of Gardena had the best senior yearling boar, winning junior champion as well as first in class.

Hollow Hill Farm and F. L. Hall showed a nice bunch of Berkshires. The Hall stuff runs strong in the Ames Rival breeding and contains a toppy lot of sows. Mr. Hall was awarded junior champion boar on Favorite's Rival by Ames Rival 115, a boar who has given a number of prize winners of both sexes.

Hollow Hill's Otto's Rancho carried off senior and grand championship in the boar class and this herd was also strong in the under six months lot.

J. D. McKay had a few fine Toggenberg milch goats and one pen of Hampshire sheep with no competition.

Rancho El Rincon exhibited a full herd of Tamworths with no competition, but there were several outstanding individuals in the bunch that showed the top bacon qualities for which the breed is famous.

## Public Demand for Holsteins Grows

Never before in the history of California have registered Holstein cattle been in such great demand as at the present time, and every indication points to a still keener demand for years to come.

Fewer cattle will be offered in the fall public sales in this State than have been offered in the fall sales for several years past, and the ones that are to be sold are of higher average quality than in previous years. Breeders are making an honest effort to select and develop their sale cattle more carefully, and from every angle of present conditions, where the drawbacks and difficulties of dairying are to a large extent being brought under control, no season has appeared more favorable for the purchase of good registered Holsteins. It is the common opinion of Holstein breeders and dairymen that demand has already brought about a sharp advance in cattle prices, but that present advances are small compared with the advances that seem sure to come quickly, and that the buyer who is fortunate enough to secure cattle this fall will have a big advantage over next year's prices.

The foregoing is not an empty introduction to a sale advertisement. It is a deliberate statement made after a visit to a large proportion of the leading breeding farms and dairy sections of California, and we are firmly convinced that the man who stocks up with registered Holsteins this fall is going to have a substantial advantage when the great scramble for cattle sets in within the next six months.

And there will be no better place to secure high values in registered Holsteins than in the

### Third Sacramento Sale 125 REGISTERED HOLSTEIN COWS, HEIFERS AND BULLS State Fair Grounds, Sacramento, October 30 and 31, 1917

EVERY ANIMAL OVER SIX MONTHS HAS INDIVIDUAL TUBERCULIN TEST CERTIFICATE AND IS SOLD SUBJECT TO RETEST BY THE PURCHASER

And we go on record with the statements that the cattle in this sale are

- the highest average offering in breeding;
- the highest average lot in individuality;
- sold under the best health requirements;
- bred to the highest class bulls

of any Holsteins yet offered at public sale in the State of California.

Judge for Yourself the Opportunities in a Sale Which Contains Such Outstanding Animals as These:

- A beautiful 27 pound, 4 year old daughter of a 36 pound sire and out of a 26 pound dam.
- FOUR GRANDDAUGHTERS OF KING KORNDYKE SADIE VALE.
- A daughter of a 38 pound sire out of a 24 pound dam.
- A daughter of a 37 pound sire bred to a 30 pound show bull.
- A daughter of a 29.50 pound cow bred to Sir Skylark Ormsby Hengerveld, who has three daughters above 31 pounds.
- A granddaughter of Aralla De Kol out of a 29 pound daughter of De Kol Burke.
- A daughter of King Walker 5th out of a 29.53 pound dam.
- FOUR GRANDDAUGHTERS OF TILLY ALCARTRA, the world's greatest dairy cow.
- Several daughters of 33 pound sires, out of good dams.
- A daughter of Segis De Kol Pontiac Burke.

- A daughter of Prince Gelsche Walker Korndyke out of a splendidly bred dam.
- FOUR GRANDDAUGHTERS OF PRINCE GELSCHÉ WALKER.
- Two daughters of a 31 pound sire, bred to It, whose dam is the first 37 pound cow and the first cow to make 1200 pounds butter in one year.
- A granddaughter of Sir Veeman Hengerveld.
- A granddaughter of Pontiac Korndyke.
- A granddaughter of Colantha Johanna Lad.
- A daughter of a 26 pound cow.
- A daughter of King Morco Alcartra out of a daughter of Prince Gelsche Walker.
- A daughter of King Korndyke Pontiac out of a daughter of Prince Gelsche Walker.

#### BULLS FOR THE BREEDER AND DAIRYMAN

The enormous records for both milk and butter production behind the young bulls in this sale will no doubt be fully appreciated by breeders in search of a high-class herd header and by the dairyman who wants to place a bull of proven blood at the head of his herd. The bulls in this sale are not only very richly bred, they are great individuals as well. Among them are:

- A son of a great 30 pound cow that made 612 pounds milk in 7 days. This calf is a beautiful individual, winning first prize at 1917 California State Fair.
- A son of Prince Gelsche Walker out of a 29 pound dam.
- A grandson of King Korndyke Sadie Vale out of a 29.39 pound 3 year old daughter of King Segis Pontiac.
- A son of King Segis Alcartra Abbecker out of a splendid heifer that made 25.06 pounds butter in 7 days with second calf.

- A son of Prince Gelsche Walker Korndyke out of a 27 pound dam.
- A son of King Mead of Riverside out of a dam that made 24.75 pounds butter in 7 days and 29,545 pounds milk and 1077.75 pounds butter in one year.
- Two sons of King Mead of Riverside out of a 27 pound dam.
- A son of Prince Gelsche Walker out of a 24 pound dam that made over 800 pounds butter in one year.

#### GREAT BULLS TO WHICH FEMALES IN SALE ARE BRED

Earlier in this announcement we made a statement concerning the bulls to which cows and heifers in this sale are bred, and the following list of reference sires is among them:

##### PRINCE GELSCHÉ WALKER

Sire of the 36 pound junior 3 year old Miss Valley Mead De Kol Walker, and a list of daughters that have held 15 California records during the past two years. His sons and daughters are in great demand at high price levels.

##### IT

The great young son of Pontiac Clothilde De Kol 2nd, the first cow to make over 37 pounds butter in 7 days and over 1200 pounds in one year. Many of his daughters have sold above \$1000 each at public auction in the East, indicating the favor in which they are held by breeders.

##### KING MEAD OF RIVERSIDE

Sire of the great Aaggie Acme of Riverside 2nd, 35.36 pounds butter in 7 days and now making a yearly record that promises to exceed 1300 pounds butter. He is remarkable for the excellent type of his sons and daughters, the splendid short time and yearly records of his daughters, and the fact that all of his daughters on yearly test have averaged over 4 per cent butter fat throughout their year's work. The demand for his daughters is especially keen, and none have ever yet been sold either at public or private sale.

##### SIR SKYLARK ORMSBY HENGERVELD

The great sire that has the distinction of being the only sire on the Pacific Coast that has three 30 pound daughters, and the only sire on the Pacific Coast that has two daughters and a granddaughter with records above 30 pounds, all under mature age.

The outstanding breeding represented in this sale, coupled with pleasing type throughout, and backed up by the strongest health restrictions yet attempted in a California Holstein sale, make this sale unusually attractive to the buyer seeking high-class breeding stock.

E. M. HOLJE,  
OwnerHOMER HEWINS, Jr.,  
Manager**WASCO FAT STOCK AUCTION**Written for California Cultivator  
By Col. O. S. Grant

The Wasco Farm Bureau Fat Stock Auction is getting to be one of the big events in the county. At the sale held Saturday, October 6, the top car of hogs fed by Mr. Hull sold for \$16.60, next car for \$16.35, and the third car \$16.00. A mixed car sold at \$15.00. Stock hogs sold for \$10.35 to \$12.50.

The grade of fat hogs in this community has improved greatly since these sales started less than a year ago. These sales give the small rancher with his three or four hogs the same selling chances that the big man with his full carload has. All four cars of hogs went to Los Angeles buyers.

Other articles were sold: one bull, several cows, wagons, chickens, in fact anything the farmers wish to dispose of.

**FIELD NOTES**

M. Bassett recently sold 20 fine young boars to the Kern County Land and Cattle Company.

Butte City Ranch reports the recent sale of 14 Berkshires, two Shorthorn bulls, one Shropshire ram and two ponies. The interest in pure bred livestock in Northern California is rapidly increasing.

The big Poland-China consignment sale at Hanford, Friday, October 18, promises to be the best yet. A large number of prize winners are cataloged, animals from some of the leading herds in the state. Copies of catalog can be secured by writing Fred D. Ross, Secretary, Hanford.

Frank Guerin writes that Lady Leola, his 28 pound Holstein mortgage lifter, has just completed a seven day test in the eight months after calving class. She made better than 13 pounds of butter. This splendid cow, and also Gaiety Girl 2nd, are listed in the big Sacramento guarantee sale in December.

Tagus Ranch is planning an addition of 20 more registered Angus bulls to their herd and also some registered cows. In all probability they will have a show herd of Angus cattle out next year. The California fairs certainly missed the Tagus show herds this year, but H. C. Merritt Jr., manager of the big ranch, says it was absolutely impossible to show this year.

Minor and Thornton's herd bull, Admiral Burke, is getting some wonderfully smooth straight backed calves. He puts remarkably fine handling qualities in his get too, and his heifers are all high testers.

Alexander and Kellogg sold a number of nicely bred bulls during the fair at Bakersfield. Dr. Little in charge of the herd says he could have sold a carload of yearlings if he had them on hand.

Tehachapi Cattle Company brought over 250 head of Hereford bulls from the mountain range to lower pasture last week. To see that number of registered bulls in one large alfalfa field is a sight not soon forgotten. There is many an individual in the bunch which would be one, two, three in the show ring with special fitting. This concern buys the best bulls obtainable for their purposes and the results are seen in the splendid calves.

Rancho El Rincon, Riverside County, exhibited Tamworth swine at the Riverside fair for the first time this fall. They secured their foundation from Joe Sefton, the San Diego capitalist who has a large herd of high class bacon types. Messrs. Remington and Milster are the owners of the herd and will exhibit at the fairs next year.

An average daily gain of 1.70 pounds per hog is the record made by the Tehachapi Cattle Company on over 800 head of shotes. This is a very creditable gain on a small bunch in the feed lot and is extraordinary for such a large bunch. Alfalfa and Sudan grass pasture, tankage, grain, pure water, and sanitary methods tell the story.

The name Hartsook is a familiar one in the field of photography on this Coast. The man who established this big photography business has caught the livestock fever and purchased a number of pure bred animals for his two large ranches in Southern California. He bought some choice Shorthorn bulls from the Jack London Ranch and his foundation of Poland-Chinas from Hale I. Marsh, Model Major breeding.

## Egg Laying Contest at Mountain Grove

By C. T. Patterson, Director Missouri Experiment Station

**G**RIT and lime, not grit or lime, should be supplied to hens which are producing eggs. It will be observed that the first expression, "grit and lime," includes both, while the last expression, "grit or lime," means one at a time. The same expressions might be applied to feed and water. If we give hens feed or water instead of feed and water, it would mean failure.

Grit is some sharp, hard substance used by the fowl to grind the food in the gizzard. The most common form of grit is a silicate, the common flint being used more than any other. This, however, contains no lime, and although the hens may be furnished an abundance of grit, would not get lime from it to make the egg shells, or they

enough to dissolve readily, it is too soft for grit to grind the food.

Grit and lime are supplied at all times to pens which make a high egg producing record. The hens in the egg laying contest are furnished grit in the form of crushed flint rock thrown into the yard, and lime is furnished in the form of crushed oyster shell supplied in hoppers.

### The Contest

The hens in the contest laid 3339 eggs during September, or an average of 11.5 eggs each. The 290 hens in the contest have laid 49,069 eggs, or an average of 169.2 eggs each during the 11 months.

The pens occupying the five highest places for September are: R. C. Reds, Missouri, 98 eggs; W. P. Rocks, Mis-

Various Kinds of Grit

The above illustration shows six ounces of grit and oystershell passed from 365 hens during one night in 39 pounds of droppings. No. 1 is coarse grit worn smooth. No. 2 is fine grit worn smooth. No. 3 is oystershell worn smooth. Oystershell should be crushed fine and fed for lime and not for grit.—Photo by University of Missouri.

may be furnished an abundance of lime, yet not have any grit to grind the food. Lime may be supplied by giving the hens crushed lime rock, oyster shell, clam shell, or by giving a mortar made of lime and sand such as our ancestors used in the cracks of log houses, or a plaster made of lime and sand.

One mistake often made is to try to supply grit and lime in the same substance. The trouble is if the material is hard enough for grit it is too hard to dissolve enough to make enough egg shells for high egg production, and if the material is soft

souri, 98; W. P. Rocks, Idaho, 97; R. C. Reds, Missouri, 89; W. Wyandottes, Missouri, 84; W. Wyandottes, Missouri, 84; S. C. R. I. Whites, Illinois, 83; R. C. R. I. Whites, New Jersey, 83.

The five highest hens are running a close race, there being a difference of only eight eggs between the first and fifth hen. The five highest hens to date are: W. Wyandotte, Missouri, 256 eggs; S. C. W. Leghorn, Missouri, 251; W. Wyandotte, Missouri, 250; W. Wyandotte, Missouri, 249; R. G. R. I. White, New Jersey, 248.

## Storrs Egg Laying Contest

Storrs, Connecticut, October 5, 1917. Report for forty-eighth week ending October 2.

Although the average production of

birds all over the country is gradually falling off at the present time, there were six individuals in the laying contest at Storrs that laid seven eggs during the forty-eighth week and 79 birds that laid six eggs each. The total production for all pens amounted to 2930 which is a drop of 209 eggs from the preceding week but 419 eggs more than for the same week last year.

The three best pens in each of the principal varieties are as follows:

### Barred Plymouth Rocks

Applecock Farm, 1997; Merritt M. Clark, 1842; Michigan Agricultural College, 1739.

### White Wyandottes

Merrythought Farm, 1731; Grant Buler & Son, 1681; Obed G. Knight, 1678.

### Rhode Island Reds

Allan's Hard to Beat Reds, 1861; Pequot Poultry Farm, 1739; Hillview Poultry Farm, 1714.

### White Leghorns

A. P. Robinson, 2058; Windsweep Farm, 1922; J. O. LeFevre, 1909.

### Miscellaneous

Cloyes & Sullivan, (Buff Wyandottes, 1805; Holliston Hill P. Farm (White Rocks) 1718; Obed G. Knight, (White Orpingtons) 1612.

While we are talking about substitutions, let's replace the squirrels with livestock.

Ready for  
Strong Winter  
Laying

**DR. HESS  
POULTRY  
PAN-A-CE-A**

Will Start Your Pullets and  
Moulted Hens to Laying

The moulting season is on. It's the most trying time of all the year for poultry. You know it takes a good deal of extra strength to grow all those new feathers. Pan-a-ce-a is a great help to your moulting hens because it enriches the blood, gives better appetite, aids the digestion, which gives them the extra strength required to force out the old quills and grow the new feathers.

Then, when the moult is over, you want your hens to start in promptly to laying again. There is a dealer in your town that will supply you with Dr. Hess Poultry Pan-a-ce-a for your flock. It's to help your poultry through the moult—it's to start your pullets and moulted hens to laying, otherwise he will refund your money.

Packages, 25c, 50c and \$1.00. 25-lb. pail, \$3.00. 100-lb. drum, \$11.00.

**The Globe Mills, Los Angeles**

# The Second National Swine Show

Written for California Cultivator By Prof. J. I. Thompson

**T**HE battle ground of champions is the National Swine Show. At the various state and interstate fairs grand champion honors have been awarded to a boar and a sow of each breed. Wherever hog men congregate you may hear questions similar to the following: Is the Pacific Coast champion equal to the one from Massachusetts? Is the Hawkeye winner superior to the champion Jayhawker? There are two ways of deciding this. One way is for the partisans to thrash it out around the stove this winter while Jack Frost reigns supreme outside. This method has one advantage. Each side may win. One other way is to collect the various wearers of the purple at some central point and leave this momentous decision to some competent judge.

This is about what happens at the National Swine Show. Of course, exhibitors knowing that they have the best, provided they show in tip-top form, keep theirs at home while the others are risking their fame at the state fairs. Some few other exhibitors, knowing that they have won at a state fair much higher honors, than they could hope to win in a national contest leave their exhibits at home and content themselves by discussing

with their friends how far up the line they "might have been."

The result is that several hundred hogs are gathered together at Omaha, and there are more real tops than can be found at any other show and fewer culls. All breeds are represented but Durocs, Polands, Hampshires, Chester Whites and Berkshires make up the greater per cent of the show and ranged in numbers as listed above. A new feature this year, and one that it seems to the writer should be adopted by state fairs, was the official weighing of every animal. The result was a shrinking in the number of 1000 pound hogs, yet several individuals exceeded that weight, the heaviest one I noticed, a Poland-China boar, being 1115 pounds. It is quite possible that there were at least two heavier ones whose weights I failed to get.

The chief interest from a California viewpoint, of course, would center in the Berkshire show here because of the presence of the herd of Frank A. Brush of Santa Rosa under the very able management of C. E. Barrows. The Associated Press has already announced that both championships went to this herd, Baron Duke 201st, 200001 winning first in the aged boar class and later senior and grand championship. Rookwood Lady 100,

207887 won corresponding honors in the sow class. Mayfield Laurel XV, the senior sow pig that defeated Rookwood Lady 100 for championship honors at the California state fair, was too heavy in pig to show to advan-

Winners at the National Swine Show

Baron Duke 201st, grand champion Berkshire boar, and Rookwood Lady 100th, champion sow, at the great National Swine Show just closed at Omaha. These prize winners are the property of a Californian, F. A. Brush of Sonoma County.

tage so had to be content with fifth place.

However, the thing that struck me most forcibly was not the ability of those two individuals to win cham-

pionships but the fact that while this firm had two entries in all of the other classes but one, only once were they outside the money. Most of these younger animals were bred by the exhibitor and all of the youngsters were bred in California. When you recall too that these hogs came 1800 miles and were showing against the three strongest herds that are out this year, namely, Corsa, Iowa Farms, and Hood Farm, and finished in the classes inside the money every time but one, and with both championships, the possibilities open to California hog men seem limitless. The fact should not be overlooked that these hogs were handled by a very experienced fitter and they showed in excellent condition.

When will other exhibitors of this and other breeds venture over this same long trail to do what they can for the advancement of the swine industry in California and incidentally their own interests?

## The Land Show

The Land Show which San Francisco says is the biggest the earth has ever seen is now on at Eighth and Market Streets. The opening night and following Sunday called out immense crowds. The exhibits in the large structure and the tents near the entrance are of the usual land show character, that is, various counties make exhibits of products, one of the strongest features of which is the display of fruits and vegetables in large glass jars.

A new feature, however, is the live stock which occupies a separate tent the first week being given over to dairy animals; beef and other live stock will come later.

The Petaluma poultry people have asked for a special poultry day and on that day every attendant is to receive a carton with two eggs guaranteed to have been laid within the 24 hours preceding delivery to the customer.

Manager Brown in his opening address said:

"The San Francisco Real Estate Board deserves congratulation for its untiring efforts in bringing about the assembling of all California and the displaying of California's most wonderful products in the 1917 California Land Show.

"The counties of California and the industries participating are the ones, however, which are wholly responsible for the wonderful success in the installing of the various exhibits, and without their efforts this, our show would be very ordinary. In each and every instance the participants have used their best material, have watched the details in an unprecedented manner, and they are therefore the real makers of this show, which in itself shows California and her unparalleled resources in an unusual manner."

Mr. Stonerod is on the ground and will give the story of the livestock exhibits to Cultivator readers.

## Avocado Growers to Meet

The California Avocado Growers Association will hold its next annual meeting in the music room of Mission Inn, Riverside, October 26, 27.

The first evening's session will be largely given up to a lecture and lantern slide exhibition based upon the fruits and other exhibits. The sessions of the day and evening of the 27th will be filled with discussions. That of the forenoon will be a symposium led by F. O. Popenoe who will discuss the matter of injury caused by the hot weather of mid-June and of lessons as to most resistant varieties or methods of culture which will reduce loss in the future. Some seven or eight other growers will join in this discussion.

Another symposium later in the day will be led by Dr. Keller of Yuba Linda. This will have to do with irrigation, its effect upon quality and quantity of fruit. This also will be joined in by other growers.

Points of interest to avocado growers will also be brought out in the address to be made by the president Thomas H. Shelden of Monrovia.

Forward looking farmers are making necessary repairs on their machinery before putting it away for the winter.

## It's Construction That Insures Lasting "Caterpillar" Tractor Service

Expert knowledge of materials, coupled with thirty-five years of experience in farm machinery designing and building, has enabled Holt Engineers to make the "Caterpillar" Tractor a machine of exceptional service and efficiency.

It is that knowledge which has taught them to make certain parts of the "Caterpillar" Tractor steel, certain parts of special alloys, some surfaces chilled and some surfaces case-hardened.

Expert knowledge and choice of materials and solid construction insure lasting service—a feature of this tractor that puts bigger profits into the hands of "Caterpillar" Tractor owners. The experience of the thousands of satisfied "Caterpillar" Tractor owners is a safe guide for you to follow.

We will gladly send full "Caterpillar" Tractor information on request.

Winston-Salem, N. C.

## Household Department

### THE SONG OF THE DEFENDERS

We march to the music of bugle and drum,  
We push through the perilous sea,  
With thunder of wings through the zenith we come,  
Where the cloud and the tempest go free;  
We have heard the great throb of the nation's advance,  
We have yielded our blood and our breath;  
Where the stately blades glance, in the trenches of France,  
We meet the wild glory of death.

For Freedom, for Freedom!  
For man's undying right!  
For the hope that God gave to the just and the brave—  
The dream of peace and light!

The ravagers blaze through their pathway of shame,  
With ruin and woe in their track;  
The hearts in our bodies are ramparts of flame,  
Our thunders shall harry them back,  
For we know the straight road of the free and the strong;  
We press to a goal that is far;  
Though the strife may be long we shall follow with song  
The gleam of the ultimate star.

For Freedom, for Freedom!  
For man's undying right!  
There is only one way to the great coming day—  
The reign of peace and light.  
—Marion Couthouy Smith in New York Times.

### OUR PART

OUR boys are going to the front to fight. Our government is working day and night to equip and safeguard them and to safeguard us who stay at home. New conditions, new exigencies everywhere confront us. What is our part?

The answer to that question is still

Food Pledge Emblem

largely a matter of personal decision. But, surely, first of all it is to send our boys, not as sacrificial lambs to the slaughter, but knowing in our hearts that they are men going to fight the good fight, and in our hearts proud that ours are among the chosen, worthy a place at the battle front. For all the heartache, we would not have them less.

Of the smaller things is the chance in our every day work to answer the call of Food Administrator Hoover to work with his commission. The coming week, October 21-28, has been named National Food Pledge Week. The purpose of this "Week" is explained in the following communication from the food commission:

Under the direction of the federal food administration, a national food pledge campaign is planned for the week of October 21 to 28. This will be an intensive drive to enroll all American families as members of the food administration.

A million and a quarter signatures were secured to the pledge cards during the summer by the woman's committee of national defense. This was a great achievement, for the handicaps were many, but the goal of this new campaign is to secure pledges from the rest of the twenty-two million American families. It will be worked as a sharp campaign to cement all America into one great fighting family.

Every man or woman who signs the pledge card becomes voluntarily a member of the United States food administration, and promises to carry out its directions and advice on food economy as far as possible. Thus America seeks to accomplish what Europe has wrought by stern legal enactment.

The plans of the campaign were mapped out in Washington, September 12, at a conference of the federal food administrators with the United States food administration heads.

In his address to the state officials, Food Administrator Hoover explained the psychology of the pledge-card. "We need," he said, "some sort of a moral, definite attachment to every household in the country to national service that will form a binding link, that will maintain the constancy of reaction in the household over the entire period of the war."

The state campaigns will be worked through state executive committees. The federal administrators have complete lists of families by counties, and the campaign workers are prepared to reach every family from the most crowded city tenement to the remotest farm home.

All existing organizations will be utilized in reaching these. It will be a man and woman proposition, calling for the voluntary services of enthusiastic community leaders. Their work will be backed up by the publicity furnished by newspapers, moving pictures and terse posters that carry the story. The fact that the campaign will be carried on by communities and states will doubtless inject into it a large element of competition. The results will be communicated each day from the county committees to state headquarters, and from there wired to Washington. Each town and county is expected to try for a 100 per cent record and the food administrators count on a final tally of all America.

This means that in the windows of every American home will hang the emblem that pledges that family, man and wife, young and old, to food conservation, and to an open declaration of allegiance to the government.

When washing small articles have at hand a bag made of cheesecloth, into which handkerchiefs, collars, etc., may be put during the boiling process. They will be much easier to handle if the work is done in this way.

The person who wastes food during war time is helping the enemy.

### FOOD PLEDGE CARD

#### TO THE FOOD ADMINISTRATOR:

I am glad to join you in the service of food conservation for our nation and I hereby accept membership in the United States Food Administration, pledging myself to carry out the directions and advice of the Food Administrator in my home, insofar as my circumstances permit.

NAME .....

STREET .....

CITY ..... STATE .....

There are no fees or dues to be paid. The Food Administration wishes to have as members all of those actually handling food in the home.

Anyone may have the Home Card of Instruction, but only those signing pledges are entitled to Membership Window Card, which will be delivered upon receipt of the signed pledge.

Cut out this slip, sign and mail to Food Administration, Washington D. C.

**Comfort at lower cost**

## CHRISTMAS MAIL FOR OUR BOYS IN FRANCE

**C**HRISTMAS packages for our boys in France should be in the mails by November 15. The time is approaching to give thought to bringing Christmas cheer to the American soldiers and sailors abroad.

Arrangements have been perfected whereby the Christmas mail to the American expeditionary forces in Europe is to be delivered by Christmas morning. Without the fullest cooperation on the part of the public it will be impossible to accomplish this result.

The three essential respects in which the public can aid in assuring a happy Christmas at the front are mail early, address intelligently, and pack securely. For this reason it is urgently requested that all persons having Christmas mail for the soldiers and sailors and the civilian units attached to the army in Europe observe closely the following directions:

### Directions for Mailing

Mails to reach the soldiers in France by Christmas morning must be posted not later than November 15.

Every package must bear conspicuously the words "Christmas mail," the complete address of the person for whom it is intended, and in the upper left-hand corner the name and address of the sender.

Every parcel must be packed and wrapped so as to admit of easy inspection by the postmaster. No parcel will be dispatched to France which has not the postmaster's certificate that it contains no prohibited articles.

The time of sailing of transports and regular liners, the examination of parcels on this side so as to obviate their having to be examined by censors, and the uncertainty of land transportation on the other side has to be allowed for. It is essential also that the packages should contain nothing that is unmailable under the parcel post regulations of this country; and that the parcels shall be securely wrapped, but may be readily opened by the postmaster to determine the character of their contents.

Measures have been taken to have packages received in France, which are marked for Christmas delivery, delivered on Christmas morning. Parcels so marked will be held at convenient stations for delivery on that day. This will insure a real Christmas to our boys in France if parcels are mailed here promptly, and prevent the Christmas character of the parcels being destroyed by too early delivery.

The rate of postage on parcels to members of the American expeditionary forces in France is 12 cents per pound from any place within the United States.

## THANKSGIVING OFFERING FOR THE FRENCH

Once a generous hearted Frenchman came to the aid of the American colonies, and at Yorktown the French soldiers outnumbered the Americans. Today the land of Lafayette is asking of America 100,000 tons of sugar, to relieve her distress. We can but share our abundance with our Allies of yesterday and today.

Americans consume sugar at the rate of seven and a half pounds a month per person. The French have been on an allowance of less than two pounds a month, and must soon go without any unless we can help.

Less candy, less sweet drinks, less sugar on oatmeal, less cake and pie for the next two months—then we can make a worthy Thanksgiving offering from America to the people of Lafayette.

## TO MIX CAKES CONTAINING BUTTER

Cream the butter, beating till light. Gradually add the sugar, beating till light and creamy. Add the yolks of eggs beaten till light, then the flavoring. Beat in alternately the liquid and flour, the latter mixed with salt and baking powder. Lastly, add the beaten whites, and fruit, if used.—Sperry Cook Book.

## NOTHING EASIER

"Don't you find it hard these times to meet expenses?"

"Hard? Man alive! I meet expenses at every turn."—Boston Transcript.

**A COMPACT 'ELECTRIC LIGHT AND POWER PLANT FOR YOUR FARM OR COUNTRY HOME**

**SELF CRANKING AIR COOLED THICK PLATE LONG-LIVED BATTERY BALL BEARINGS NO BELTS BURNS KEROSENE**

## Over 40,000 Satisfied Users Endorse DELCO-LIGHT

Over 40,000 owners of farms, country homes and stores, throughout the world, representatives of over sixty different lines of business are finding DELCO-LIGHT to be a dependable and trustworthy electric light and power plant.

Here is just one of the thousands of testimonial letters on file:

I purchased Delco-Light on account of its simplicity and ease of operation and I am satisfied with the results it is giving. There are 36 lights in the house, barns and milk-houses. Operating expense one year \$15.00.

FRANK W. CONNELL, R. F. D. No. 1, Hillsboro, Oreg.

Price \$350 and \$420 f. o. b. Dayton, Ohio, except Western U. S. and Canada

## MORE BETTER LIGHT

Install a PRIVATE GENERATING PLANT and have ELECTRICITY FOR LIGHT AND POWER. The Uni-Lectric system generates the standard 110-volt direct current, which will operate from 1 to 50 lights. It will run your sewing machine, electric iron, vacuum cleaner, churn, washing machine, etc.

### NO BATTERIES—NO SWITCHBOARD

High speed gasoline motor, generator and automatic governor, all complete. Uses standard lamps and fixtures. Can be used for one or more houses.

## HAY

Quotations by Nichols-Loomis Company. Wholesale prices to growers f.o.b. L. A. carlots.	
Tame Oat	22.00@24.00
Volunteer Oat	17.00@19.00
Wheat	18.00@21.00
Barley	19.00@22.00
Alfalfa	19.00@22.00
The Alfalfa Growers' Association of Southern California writes:	
"The Association is now asking \$23.50 for No. 1 cow hay f. o. b. cars Los Angeles and Southern California points. The later cuttings are short and we are experiencing a shortage in our crops. Hay is selling very readily and all buyers are offering high prices. We have heard nothing under \$20 per ton being offered the growers for alfalfa. That price offered is of course net to the grower. We find that little hay is stored for this winter's use and that there will undoubtedly be a shortage before spring."	
Straw	7.00

Our Heavy Engine Chisel is made to use with the larger Tractors for extreme deep chiseling and is an excellent tool for preparing the ground for Beans, Beets or other crops. If used before the winter rains, it will open up the ground to a depth of ten to fourteen inches, aerating the soil and allowing the moisture to penetrate below the usual plowpan, which is to be found in almost all of our land.

The frame is of the "A" type, with steel casings and extra large standards. Wheels are twenty-four inches high, with six-inch face. Any style of chisel can be used in place of the "V" blade shown in the cut.

**STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS, MARCH 21, 1916.**

of California Cultivator, published weekly at Los Angeles, Cal., for October 1, 1917.  
State of California, County of Los Angeles, SS.  
Before me, a Notary Public in and for the State and county aforesaid, personally appeared Frank H. Thomas, who, having been duly sworn according to law, depose and says that he is the publisher and business manager of the California Cultivator and that the following is to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to-wit:  
1. That the names and addresses of the publisher, editor, managing editor, and business managers are:  
**NAME OF PUBLISHER** Cultivator Publishing Co. Los Angeles, Cal.  
**EDITOR** C. B. Messenger Los Angeles, Cal.  
**MANAGING EDITOR** Business Manager, Frank H. Thomas Los Angeles, Cal.  
2. That the owners are (Give names and addresses of individual owners, or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock.) Cultivator Publishing Co. Los Angeles, Cal.  
Frank H. Thomas Los Angeles, Cal.  
R. M. Teague San Dimas, Cal.  
3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.) None.  
4. That the paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities as so stated by him.  
5. That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is— (This information is required from daily publications only.)  
Sworn to and subscribed before me this 5th day of October, 1917.  
W. E. STORRE, Notary Public in and for Los Angeles County, California. (SEAL)

## All You Can Ask in a Car —the Maxwell

The day's work is done.  
The lamps shine cheerily. All is quiet  
and serene in the home.

Now—let's sit down and talk about  
that motor car you want to buy.

You are exacting in your ideas about  
motor cars. You demand mechanical  
efficiency, economy, and a smart appear-  
ance.

That is why we affirm that the Max-  
well is *your* car, above all others.

Mechanical efficiency! We are pleased  
and proud to discuss Maxwell efficiency  
with you.

The Maxwell builders have only one  
chassis model, which is never fundamen-  
tally changed, but constantly improved  
and refined.

Four years of concentration by one  
of the largest organizations in the motor  
car business has brought the one Max-  
well model to the pinnacle of mechan-  
ical perfection.

The engine is without a  
peer. The smooth clutch  
runs in oil. The perfected

transmission is efficient and trouble-  
proof. The mighty axles laugh at strains  
of the road.

This mechanical efficiency bears fruit  
in economy of operation. Thousands of  
Maxwell owners run their cars at a cost  
of \$6 to \$8 a month.

This year we have lengthened the  
wheelbase six inches and have put in  
6-inch instead of 3-inch steel frames.

But we have not added one pound to  
the lightweight Maxwell.

And, having perfected the Maxwell  
mechanically, we are now enhancing and  
perfecting its beauty.

This year the windshield is sloped, the  
body lines more graceful, and the body  
roomier.

The Maxwell has the same style today  
as the up-to-date models of the highest  
priced cars.

Visit your nearest dealer. See the  
Maxwell. Get the figures on the car's  
records and performances.

Then, we *know* you will insist on own-  
ing a Maxwell.

## 7th Annual California Nurserymen's Convention

Nurserymen Gather in San Jose and in Berkeley and Discuss Matters of Transportation, Recorded Trees and Many Other Items of Interest to the Nursery and Orchard Industry. Santa Clara Valley Proves Royal Host

**M**IKE Flannery, the Westcote agent of the Interurban Express Company, leaned over the counter of the express office and shook his fist. Mr. Morehouse, angry and red, stood on

the other side of the counter, trembling with rage. The argument had been long and heated, and at last Mr. Morehouse had talked himself speechless. The cause of the trouble stood on the counter between the two men. It was a soap box across the top of which were nailed a number of strips, forming a rough but serviceable cage. In it two spotted guinea-pigs were greedily eating lettuce leaves."

And Mike and Mr. Morehouse, who were the heroes of Ellis Parker Butler's story, "Pigs is Pigs," had no more serious problem than that which confronts nurserymen of California and the Western Classification Committee of the railroads. All have probably read "Pigs is Pigs," and the comical situation in which Mike is placed is so far fetched and makes such an improbable story that it affords many a hearty laugh. Nurserymen of California, in annual session in San Jose, found themselves in much the same situation as Mr. Morehouse, and Mike Flannery seems to be an excellent prototype of the classification committee. The committee maintains that for some reason a citrus tree is entirely different from an evergreen tree of any other kind and hence first class rate and a half obtains with citrus trees, and the nurseryman or planter, as the case may be, pays 33 1-3 per cent penalty because of the unreasonableness of the classification commit-

California Nurserymen Ready for the Eats

The San Jose Chamber of Commerce and Nurserymen of Santa Clara Valley gave Royal Good Time to Nurserymen at Alum Rock Park, one of the Beauty Spots of the State.

tee. Mr. Meriwether, chairman of the committee on transportation of the state association, has written, then written again, and finally made a trip to Chicago in order to secure a reasonable adjustment of this and some other problems in transporting nursery stock. The chairman of the committee representing the railways has agreed to a meeting on the Pacific Coast when the matter can be pre-

sented to the classification committee, but like Mike's guinea-pigs the problem has only grown larger and the question has been referred from one to another of the classification committee and the Pacific Coast meeting has been deferred indefinitely.

All the nurserymen want is reasonable treatment and a ruling which ordinary railway agents—some of

## Better Seed---More Wheat

The Food Commission is Appealing to California to Produce Thousands of Acres More of Wheat Than Last Year. Seed is an Important Factor. Treatment for Smut Another. Letters Show That Provision is Made for High Grade Seed

**A** SUBSCRIBER who is anxious to serve his country and grow food and incidentally increase his own profits has written asking the Cultivator as to seed wheat, where it can be secured, how much it costs and how it should be handled. The handling, i. e., the practice of seed bed preparation, drilling or broadcasting, and other items are worthy of separate articles. But as to the seed:

The Cultivator has written to several seed houses and has information which follows, showing that there is abundance of seed and that it may be had at reasonable prices. The department of agriculture has issued warnings that in our zeal for planting more extensively we must be careful and not pay exorbitant prices for seed nor permit any abnormal expenditures. The fancy grades of wheat are being offered at long prices and the wheat grower may benefit himself by making some experimental plantings, but the main crop stick to the proven varieties. It is to be noted that the Grain Corporation, which names the prices on commercial wheats, permits the handling of seed wheat at additional prices, to allow for extra cost of cleaning with reasonable price to the grower. The large millers have agreed to handle and clean wheat at actual cost.

From a university standpoint we have the following from

Prof. Jno. W. Gilmore

As you probably know, the provisions of the law referring to the storage of grain in warehouses do not apply to those stocks of grain which are to be used for seed. In other words, while commercial stocks must remain in the warehouse more than 30 days, yet for material design-

ed for seed this does not apply. There is now concerted action on the part of several of the leading millers of the state, including the Sperry Flour Company and the Globe Milling Company and also many of the warehouse men, to locate and set aside good stocks of standard varieties of wheat for seed purposes. These stocks will be cleaned and graded in order to rank as No. 1 wheat. Farmers are being requested wherever possible to put in their orders for seed wheat early, dealing in every instance through the local seed dealers or warehouse men. This procedure is desirable for if a sufficient amount of the desired variety may not be on hand, the milling companies have agreed to see that it is secured at once without extra cost to the farmers. By dealing through the local warehouse men or dealers the necessity for credits is oftentimes obviated. In those counties where farm bureaus are organized and where farm advisers are at work the farmers are pooling their orders to be supplied through the farm bureau. By this means the desired seed can be secured in the locality oftentimes in carload lots, thus saving expense to all concerned.

There are also under the direction of the state university five men in the field and available to give demonstrations and suggestions to wheat planters regarding the treatment of their seed wheat for the prevention of smut. These men are working mostly in the counties where farm bureaus have not been organized but are in a position to go into any part of the state where they may be wanted for assistance regarding the planting of the fall crop of wheat. We are also attempting to indicate to those who desire to know the standard varieties of good milling wheats which will in

all probability do well in the various sections of the state.

Sperry Flour Company

We carry a supply of seed wheats, oats and barley, all these grains recleaned. Of course we are more interested in wheat than either oats or barley, and in the course of the season try to pick up white milling wheats for sowing purposes as true to type as it is possible to get them. We also test these wheats for seed if they have the proper milling and baking qualities, as wheats generally retain their characteristics, and one of the most essential things to do in raising wheat is to obtain seed with the best milling qualities possible to get.

After the grain comes from the farm it is thoroughly recleaned and a heavy suction put on to draw out all the light grains, leaving only the large healthy kernels.

You ask about the prices on these wheats and in reply will state that at all times we have to pay a premium in order to get the best. We intend selling recleaned wheat for sowing purposes at actual cost, plus the cost of cleaning and carrying charges.

One of the best milling wheats grown in California is the White Australia, the price of which is \$4.00 per hundred weight here today. Another milling variety that promises to do well in California is the Early Baart and the price of this wheat is \$4.50 per hundred weight. Club and Sonora wheats are \$3.90 per hundred weight and Red Oats \$3.40 and barley \$2.75 per hundred weight f. o. b. Stockton. These are prices that we are quoting today but they are subject to change at any time. (Letter written October 1.)

Great Western Milling Company

Seeds are a matter of vital import-

ance, but we find the farmers in a very large percentage of cases want to consider price first, over purity and cleanliness. Therefore it becomes necessary for us, in order to meet competition to give the farmer anything he wants.

We are in a position to furnish any of the seeds from any locality and we can also furnish samples of any varieties, and with the new testing apparatus we are just installing we will be able to give exact percentages of foreign substances or seeds contained therein.

Morris & Snow Seed Company

There will probably be enough seed grain to supply the demand this winter and we will be in position to supply most of the varieties used here. As to price this always depends on the supply and demand. Seed grains usually run 50 cents to \$1.00 per hundred above the commercial grades.

Germain Seed & Plant Company

We have selected and put aside for the coming season the following varieties: Sonora wheat, Defiance, Propo, and Durum, or Maccaroni.

We are endeavoring at the present time to obtain a supply of White Australian. It has been a good many years since any of the genuine White Australian wheat seed was brought into this country, and there seems to be very little to be found at the present time, although in a great many sections this wheat gave excellent satisfaction, bringing a better price on the market than any of the other varieties grown here.

In San Diego and Imperial Counties they are obtaining some very good results from the Defiance wheat. This wheat is a most reliable rust-proof

Which accurately describes and prices more varieties of trees, shrubs, vines and roses than any other Nursery Catalogue in the United States.

### This New Illustrated Catalogue and Practical Planters Guide

(REVISED AND COMBINED)

**SENT FREE ON REQUEST**

**Some important features of this book are:**

- Beginning right.
- Best methods of planting.
- Proper pruning for big crops.
- Soils, Cultivation, Irrigation, etc.
- New varieties of trees you will want to know about.
- Roeding's Landscape Service Department.

This book is equally valuable for the small fruit grower as well as the grower who controls hundreds of acres. Even though you have only a few vines or trees, you will find this book useful as it tells you about all kinds of plants and trees and how to grow them.

**Fancher Creek Nurseries**  
202 Holland Building Fresno, California.

## Recorded Nursery Trees

**P**EDIGREED vs. recorded trees has been discussed at some length by Dr. Colt in former issues of the California Cultivator, and nurserymen and orchardists have never yet fully decided on the proper term to apply to selected buds from trees of known productivity. To the orchardist the term is immaterial; what he wants is to be certain of securing quality trees; the nurseryman wishes to use the word which will convey to the orchardist information as to his trees.

In the issue of the Cultivator of January 20, this year, Dr. Colt discussed this matter, advocating the use of "recorded," also the sealing of such stock by the county horticultural commissioner or his deputy. Details of this plan are given in the issue of the Cultivator above referred to. Dr. Colt was invited to discuss this subject more fully at the State Nurserymen's Convention where he gave much of the information already given to our readers in that issue, in addition referring to the advisability of securing buds and scions from recorded trees. He said:

Proceeding now from the realm of science to the matter-of-fact concerns of practical orcharding in this state; what do we find? We find that with the possible exception of the nectarine, none of our California orchard fruits have so far given rise to a sport which possesses any marked commercial value. While the Navelencia and Thomson Improved oranges have been advertised for many years, you nurserymen know that they are not now being planted on any large or commercial scale. Furthermore if sports of great apparent value appear it will be necessary to test them for a number of years or else repeat the failures of those who a few years ago were planting large acreages to Thomson Improved ranges.

The overwhelming majority of the sports which occur in this state, whether they are comparatively rare as with apples or more frequent as with citrus fruits, are retrogressive and represent deterioration in the type. These aberrant forms have crept in unnoticed and have been increased by propagation and widely disseminated. The Australian Navel orange is a good example of these degenerates. There are probably similar cases among walnuts, figs, prunes, and other fruits. The frequency of these off types in any class of fruit probably depend upon the degree to which they are heterozygous or the amount of genetic disturbance established by previous crossing.

The popularization of the idea of improvement of tree fruits by bud se-

lection has confused the common mind and led many to lose sight of the fact that the greatest function of bud selection in California is the rescue of our degenerating varieties rather than their improvement. The production of our orchards is subnormal. Bud selection is an efficient means of bringing it back to normal. The scientific principles involved in the improvement of varieties by bud selection by no means understood. Our journals are filled with scientific discussion of the subject. On the other hand, there is not a particle of doubt about the efficacy of bud selection in standardizing our orchard trees and bringing their yields back to normal. The greatest function of the performance record is to mark poor trees for elimination. It also has some value helping to locate mother trees for cutting.

Now I take it that the nurserymen of this state who are business men are interested in facts rather than theories. It is a fact that they can be of inestimable benefit to the fruit growers of this state if they will propagate from selected buds only. It costs little more to produce such trees, unfortunately the public has not been educated to the point where they will pay the increased cost for all trees produced. There are many planters however, who are willing to pay an adequate price for trees of known quality.

In regard to terminology, I wish to take this opportunity to again go on record as opposing the use of the term "Pedigreed" in connection with plants propagated by cuttings, buds or grafts. The word pedigree is derived from the French pied-de-grue, meaning foot of a crane and refers to a table or chart of ancestry showing the lines of descent converging to a common point like the toes of a crane's foot. The word was evidently coined for use in connection with animals. Many people who are poorly versed in horticultural matters have a more or less vague idea that if a tree is said to be pedigreed it must necessarily be of fine ancestry. This is often taken advantage of by the astute tree salesman. Therefore my chief objection to the term "pedigreed" is that it implies more than is justifiable, and as long as the general public does not realize this, it possesses unwarranted selling power.

The term "recorded" trees is to the mind much to be preferred to pedigreed. They are trees for which a record has been kept both of the fruiting performance of the tree from which the buds were taken and of the propagation of each individual tree placed in the nursery.

## Date Palm Scales Eradicated

**H**ORTICULTURAL Commissioner G. H. Hecke is in receipt of a communication from Walter T. Swingle of the United States bureau of plant industry, that the government experts have solved the problem of controlling the troublesome scales which infest the date palm. This news is received with especial interest in Southern California as the date industry is becoming a very important one in this section.

For some time there has been on the statute books of the state a law restricting the movement of date palms from one locality to another, because of the danger of spreading the Parlatoria and the Marlatt scales—the two worst pests of the date palm.

Now comes a report from the government that these pests can be controlled and that strict watch will be kept over importations in future. Mr. Swingle's letter says in part:

"You will be interested to know that Mr. Shamblin, working for the federal horticultural board in cooperation with me, reports very gratifying progress in the eradication of Parlatoria blanchardi from the date palms in California. It is highly probable that this scale will be entirely eradicated within the next year or two, provided strict control is exercised on importations. I am contemplating recommending to the federal horticultural board that in future importa-

tions of date offshoots from abroad be held in permanent quarantine and never released for distribution small lots, in other words, that they be planted on a tract and kept there and only clean offshoots grown from these imported trees, when declared free from scale insects, can be sent for general planting.

"I feel that unless some such modification is made of the regulations the federal horticultural board immediately after the close of the year unprincipled importers may import large numbers of date offshoots of inferior varieties and sell them at retail all over Imperial County and the eastern half of Riverside County. The present regulations are not sufficient to guarantee that such offshoots are entirely free from scale insects, and experience has shown that the work of inspection rendered very costly by small plantings, in dooryards, etc. It is therefore my intention to suggest that future imported offshoots be planted only in large blocks where they can be held permanently in quarantine and observed easily by the inspector. "Mr. Shamblin also finds he is making great progress in controlling Phoenicoccus marlattii and thinks it may be possible to grow Marlatt scale free offshoots from infested trees, provided they are sprayed in proper manner. Every effort is being made to prevent the spread of the scale to seedling palms in Riverside

ty and I believe successfully, like the cooperation of Horticultural Commissioner D. D. Sharp and agents. I feel that we will have

accomplished a most gratifying result if we are able to eradicate *Parlatoria blanchardi* and to control completely the *Phoenicococcus marlatti*."

## Citrus Performance Records

**TOP-WORKING** with buds from trees of known productiveness will do much to improve yields of citrus fruits. Deterioration in a number of California citrus orchards has been cause of complaints from growers who find that in some cases they are securing lower yields and a larger portion of low quality fruit than in previous years. Investigation by experts of the United States department of agriculture has shown that this trouble is due to the unintentional propagation of strains which are undesirable because of bud variation. It is to correct this condition that top-working is recommended.

Bud variation is of more or less frequent occurrence in the trees of citrus varieties, as is stated in the Farmers' Bulletin No. 794, "Citrus Fruit Improvement: How to Select and Use Tree-Performance Records." It is not in itself frequent enough seriously to affect the commercial product of the orchard. It is because undesirable bud variations have been indiscriminately propagated in nurseries along with the desirable strains of citrus fruits that it is now found in the commercial orchards a sufficient number of undesirable trees seriously to affect the commercial quality of the fruit and yield of the orchards. While there is no generally accepted theory to account for bud variation it appears probable that the effects of it, as far as commercial citrus plantations are concerned, can be controlled through the use of buds selected from individual trees which are known to be consistently heavy producers of fruit of the most desirable kind.

The first step in the improvement of an orchard by this method is to obtain records of the individual trees. For this purpose the bulletin mentioned recommends a system of numbering under which each tree is given a number, one indicating the division of the orchard to which it belongs; the second, the row; and the third the location in the row. These numbers should be painted conspicuously on the tree. After each tree has been numbered a record should be kept of the amount and grade of all fruit picked from it. This involves a slight additional expense in picking, but the advantages will more than offset the additional outlay. Ordinarily it has been found best to have one man from each picking crew assigned to this work.

The data obtained in this way should be transferred to a form showing the records of several successive seasons. The information afforded by these records for two successive seasons will, it is said, demonstrate to every grower the importance of the system. The records for four successive normal seasons will probably afford an adequate basis for selecting the best trees as sources of bud wood for propagation. This wood should be cut only from the best trees of the most valuable strain, and only fruit-bearing bud wood should be used for propagation. Every bud stick should have one or more typical fruits attached, if possible. The wood should be used as soon as possible after it is cut, but if it is necessary to keep it for some time it should be packed in sterilized sphagnum moss and stored in a cool room, with a temperature preferably of about 70 degrees Fahrenheit and a relative humidity of 90 per cent. The spring is the most favorable time for budding, but it can be done at any time during the growing period of the tree.

Two or more of the main limbs of an undesirable tree which it is proposed to top-work should be selected as the foundation for the new head. The selected buds should be inserted in these limbs about one to two feet from the trunk of the tree and after they have made a union with the tree the limb should be sawed off about six inches above the inserted bud. The freshly cut surfaces should be covered with some pruning compound and the remainder of the tree coated liberally with whitewash or other ma-

terial as a protection. After about a year's growth the limbs should be cut back again so that only one bud is left on each.

The Cultivator still has on hand a few of the annual and period tree record blanks which aid in keeping records of every tree in the orchard.

With corn worth two cents an ear, or more, it pays to husk the cornfields clean. The ears that are missed don't help to feed the Allies.

### GOOD PRICES FOR OLIVES

MANAGER Vernon Campbell of the California Growers' Association writes

As result of our last year's olive pack at our association plant at Hemet we returned our growers, as follows: For small olives, \$104.27 per ton; medium, \$142.50; large, \$187.32; extra large, \$216.04; mammoth, \$282.14.

This season we expect to return our growers at least \$50 per ton more for the various sizes, as the canned olives will bring more on the market.

One reason we are able to make the growers such returns is that the same factory which handles the deciduous fruits handles olives in the winter time. On account of the very large tonnage of other fruits handled the expense borne by the olives is very small and thus reduces the cost of

packing. No plant operating on olives alone can ever pack at so low a cost as we are able to pack in these co-operative canneries.

If the olive growers would become members of the California Growers' Association and take advantage of the association's canning plants in the packing of their olives, they would be able to realize more for their crop than has ever been paid in California.

### INCREASE QUARANTINE INSPECTION

I have just received the report of Avery S. Hoyt, southern field deputy, upon his trip to Florida to investigate citrus canker, and the serious situation which he found in that unfortunate state leads me to urge everyone of you to keep up, even increase, the efficiency of the quarantine inspection. We must keep the citrus groves of

## There'll Be A Difference

**I**F your neighbor plants an orchard in holes dug with a spade, and you plant in holes made with Hercules Dynamite, there will always be a difference in your favor.

The difference will show in the first cost in time and labor; in the size and strength of the trees a year from now; in the quantity and quality of the fruit obtained four and five years hence; and lastly, in the profits deposited in the bank. Eventually your neighbor will follow your method of tree planting. The difference will make him.

## HERCULES DYNAMITE

not only makes holes more quickly and cheaply but it makes *better* holes. The soil is loosened and broken up. Roots have a chance to spread as they should. The tree has nothing to do but live and grow and prosper.

When planted in a spade-dug hole it

has to fight for life. The difference always shows.

Find out more about the use of Hercules Dynamite on your farm. Write today for the 64 page book, "Progressive Cultivation." It is sent free on request. The coupon below is ready for your signature.

TOM W. LOW, Assistant Manager  
A. F. MOLINA, Chief Clerk

Farmers can best do their bit by doing their best now.

California clean as far as it lies in our power to do so.

Mr. Hoyt will take a trip through the citrus sections of northern California the week of October 1 to 6 and will address meetings of the growers at Fair Oaks, Orland, Oroville and other points. Upon his return to Southern California the latter part of October he will be prepared to give a stereopticon lecture on the Florida situation.—G. H. Hecke, State Horticultural Commissioner.

### BETTER SEED—MORE WHEAT

Continued from Page 419

wheat, does well on the high, dry hills in San Diego County and will do better under irrigation in the Imperial Valley than almost any other variety.

The following varieties of wheat comprise what we have to offer, and the prices quoted are per hundred pound bags. In larger quantities we shall be glad to quote special prices on request: Defiance, \$5.00; Durum or Maccaroni, \$5.50; Sonora, \$5.00; Turkey Red, \$5.50 Propo, \$5.00. We also quote: Rye seed, \$4.25; barley, common, selected, re-cleaned, \$3.00; oats, Texas grown, red, rust-proof, selected stock, \$3.75; speltz, or emmer, \$5.00; buckwheat, \$5.50. (Prices as given October 4.)

We are at the present time working on a lot of Beardless barley, also Hulless and Bald barley, to be shipped from Oregon or Washington; but are unable at this time to state definitely whether we shall be able to get this seed in time for fall planting.

Globe Grain & Milling Company

It is our opinion that all varieties of seed grain will be held very high this year, due to the peculiar existing conditions. While a maximum price has been placed on wheat by the administration, this does not apply to seed wheat. We are disposing of considerable Oregon Bluestem and Early Bart, to various sections of the country for seed purposes. Regarding chicken feed varieties: There are still ample stocks of choice Sonora remaining in the San Joaquin Valley warehouses to take care of any demand which may arise, and we do not anticipate extremely high prices on this particular variety.

The California oat crop was very short this year, and practically everything raised in this state was either moved to the San Francisco territory or retained at shipping point for local use. Southern California has been compelled to depend entirely on shipments from Texas and Oklahoma, and prices have not been exorbitant, compared with values of other grains.

We are disposing of a fair quantity of seed barley in this territory, most of which is grown in the north end of the San Joaquin Valley. This is choice quality, fairly heavy, clean, bright, and has always given very satisfactory results.

Aggeler & Musser

We are usually able at all times to furnish high grade seeds of wheat, oats, barley, etc., at the market price.

C. C. Morse & Co.

In reply to your letter asking for information as to barley and other grains for seed, we would say that we are carrying these and are putting out an extra good grade.

The price of this cleaned seed is of course higher than the market price, for everything that is taken out is a loss and the labor charges are high these days. It is however, by far the cheapest seed that a planter can put in, for there is no use in paying for dirt, infertile seed or wastage of any kind.

### NURSERYMEN'S CONVENTION

Continued from Page 419

which are of Mike Flannery's type—can understand.

But the report of Mr. Meriwether for his committee made only a very small part of the interesting program and discussions which occurred in San Jose last week at the seventh annual session of the California Association of Nurserymen. Leonard Coates, the president, and Joe Brooks, all around chief factotum and Poo-Bah of the Santa Clara Valley, had made complete preparations for a great week, and indeed it was a week of pleasure and, we believe, of profit to all nurserymen attending.

The sessions began on Wednesday evening when the mayor or city manager of San Jose extended a welcome to the visitors, and his proffer of the entire city to the visiting nurserymen was surely kept for everything which the nurserymen could desire was turned over to them until the closing session on Friday evening, an executive session in which nurserymen discussed in a heart to heart way their own business affairs.

However, the real closing session of the convention was that held in the city of Berkeley on Saturday afternoon. Dean Hunt appeared at the first session of the nurserymen on Wednesday night and gave personal invitation to attend the dedicatory services of Hilgard Hall. The invitation was unanimously accepted for practically every nurseryman who attended any of the sessions of the week appeared before the speaker's stand at the dedication. Later in the day the first convention to hold a session in the new building was called to order.

The association now has 152 members but the attendance, especially at opening time, was much smaller than President Coates had anticipated, in fact, not till the closing day when George Roeding arrived and gave some additional pep to the discussions was the chamber of commerce hall fairly well filled.

State Horticultural Commissioner Hecke and his deputies, together with other officers of the state commission, were also present during the closing sessions, and while there was some discussion on the part of nurserymen to the effect that the present state law was one of the most unreasonable ever written into any statute book, the officers of the state and county commissions each maintained that reasonable enforcement of the reasonable measures of the law would only result in good to the entire fruit growing industry. The dependence of the fruit grower upon the nurserymen and vice versa was a point made by many of the speakers.

Besides Mr. Meriwether's report on transportation Mr. Crow touched upon the present condition of the deciduous fruit trade and its effect upon the nursery business. Mr. Swett, chairman of the committee on viticulture, made report of the present outlook and emphatically sustained the effort being made to secure the passage of the Rominger bill. Mr. Kruckeberg reported on publicity secured for the association and the report of E. H. Elmer of San Jose on exhibitions was a visible one in the excellent showing of plants and bulbs which he secured from the gardens of the Cottage Grove Nurseries. Mr. Ward has a branch of his Humboldt County nurseries just in the outskirts of the city of San Jose.

Another discussion which called for general participation was that introduced by Max J. Crow, "How to Make Labor Content." Mr. Crow stated that he had not employed, and hoped that he should not employ, other than white American labor, but there was a labor situation which called for correction, and so long as organized labor held its present attitude the only solution of the problem which confronted the employer of labor was the securing of Asiatic labor or that from any other section which offered. His position was commended and condemned, for many of the nurserymen felt that regardless of the cost to them and other employers of labor, California should be maintained as a home for Americans or those who will become Americans.

Mr. Crow referred to the awful destruction of orchards in Europe and to the duty which will confront fruit growers of America for a decade to come. Mr. Bergholdt and other speakers called attention to the increasing consumption of fruits, stating that they are more and more considered a staple and the present time was one in which encouragement should be given to increased consumption because of the need of Europe for staples easy of shipment. Americans now eat far more fruit per capita than any other people, and in the production of this fruit, while California has no monopoly it does have advantages possible to no other section of the world. It being true that California fruit is becoming a staple there is a call for greater production of dependable nursery trees.

Excepting for the opening session the only evening session open to the public was that of Thursday which was given over entirely to discussion

of landscaping or ornamentation the home grounds. Planting and care of lawns, which had been assigned Mr. Wakefield, who had been named commissioner of San Jose, was charged to take in general landscaping, especially with reference to city improvement. John Vallance discussed the vegetable garden as a home beautifier, and if his own home garden comes up to his estimate of what home vegetable garden should be

## KNOW YOUR ALFALFA SEED

After going to the expense of proper land preparation you can't afford to take any undue chances with the seed you plant.

There's one alfalfa seed on the market that you don't take any undue chances with, because it is sold with a guarantee of satisfaction.

You'll find it only in sacks bearing the trade name

It's the variety used in over 99 per cent of the commercial plantings in California. The one you've always used but now field selected and standardized by experts. Let us send you prices and samples of

New Crop Seed

Fresno, Cal.**

ne has a most beautiful setting. One of the interesting discussions brought out during the convention was that of W. L. Howard of the division of pomology, University of California, who has been making investigation of the stocks and information which he has secured from many nurserymen. He spoke as follows upon:

**Stocks for Deciduous Fruit Trees**  
A survey of the leading California nurseries in late summer 1917, showed the average that the following stocks are now being used for deciduous fruits:

For almond: Almond (bitter and sweet) 56 per cent; peach 44 per cent.  
For apricot: Apricot 58 per cent; peach 27; Myrobolan 13; almond 3 per cent.  
For cherry: Mazzard 71 per cent; haleb 26; others 3 per cent.  
For peach: Peach 91 per cent; almond, apricot and Myrobolan combined 9 per cent.  
For pear: Japanese or Serotina 63 per cent; French 33; and quince 4 per cent.

For plum: Myrobolan 60 per cent; peach 37; and almond 3 per cent.  
For prune: Myrobolan 64.3; peach 11.4; and apricot 1 per cent.

The reasons given for planting almond on peach are that peach is more adaptable to extremes of too much and too little moisture and that it thrives better than almond root on thin or dry soils. Also peach is not so susceptible to root knot. It is universally conceded that Myrobolan is a good stock for almond on account of its union.

While peach is pretty generally grown upon peach stock, almond seems to be preferred by many for dry soils. This is apparently in conflict with the statement that peach is a good stock for almond because it is better than the almond root on dry soils. Myrobolan is used for soils inclined to be wet. Davidiana has been successfully used on a small scale for growing peaches in alkaline soil where peach stock had always failed.

Many nurserymen and growers prefer to use peach or even almond stock where the trees are to be planted on dry, gravelly soils. In like manner, peach is the preferred stock for trees in foothill soils where peaches are known to succeed.

Peach is a popular stock for apricots where the trees are to be planted on dry or gravelly land, and Myrobolan stock adapts the trees to soils usually too moist for apricot roots. Opinion is divided regarding the advisability of using Mahaleb as a stock for sweet cherries. Some are enthusiastic at the prospect, saying that Mahaleb is the coming cherry stock, while others can see no good in using it at all except for sour cherries. The Mahaleb advocates say this stock will enable the trees to better withstand extremes of too much or too little water in the soil, while the opponents declare it makes a poor union and harms the trees.

Nurserymen are pretty well united in the advisability of discarding the French stock for pears in favor of the Pyrus serotina, or the so-called Japanese stock, which is quite resistant to blight and wooly aphids.

Every S. Hoyt, deputy state horticultural commissioner, outlined some of the difficulties and awful losses endured by Florida citrus growers because of the citrus canker.

The resolution committee reported an expression of appreciation for the courtesies of the San Jose Chamber of Commerce also of the Santa Clara Valley nurserymen who extended the glad hand. San Jose ladies led to the pleasures of visiting by various courtesies.

The luncheon at Alum Rock, a favorite resort of Santa Clara Valley, was put up by the city of San Jose, was a final pleasure of the San Jose meeting.

Officers for next year are: President, Max J. Crow; vice-presidents, J. Bergtholdt, Charles Howard, Henry Ehl, T. E. Mabey, George F. Otto; secretary-treasurer, H. W. Kruckeberg.

At the recent annual meeting of the Bernardino County Fruit Exchange James Barnhill of Colton was elected president and John I. Cunningham, secretary-treasurer and manager.

## Apricot Disease and Grape Mealybug

**J**P. CUNDIFF paid a visit recently to Fresno, Kings and Tulare Counties. While in Kings County he spent some time with Commissioner Fred K. Howard inspecting apricot groves infested with the unidentified gum disease which is becoming such a serious problem. He reports: "The apricot disease is assuming rather alarming proportions in some sections of this county and unless a remedy is promptly found which will control this disease severe losses will result to apricot growers."

### Grape Mealybug

"A number of vineyards were investigated where the mealybug infestation is the most severe. This included the 40 acre vineyard where Prof. R. L. Nougaret of the federal department of agriculture has been doing experimental work for the control of this pest for the past three years. The grapes were being picked and placed on trays, which gave an excellent opportunity to observe the severity of the infestation and injury wrought by this pest to the crop being harvested.

"Commissioner Howard informed me that this pest, (*Pseudococcus bakeri*), has spread within the past few years until it can now be found

in most of the vineyard sections of Kings County. This pest has also been found in some of the vineyards of Fresno and Tulare Counties.

"Commissioner Howard reports that in all of the experiments thus far made by him, working in conjunction with Prof. Nougaret, no method has been devised whereby over 95 per cent efficiency has been obtained in the control of this pest. The best results thus far secured have been by an application of oil spray in the early spring just after the vines have been pruned. An efficiency of 95 per cent does not keep the pest below a point of injury to the crop or prevent its continued spreading to other vines."

### SOUTHERN CALIFORNIA APPLE SHOW

Apple growers of Yucaipa Valley are planning for the Southern California Apple show to be held at Yucaipa, November 1-4. The committee of local people pushing the matter are: David Coey, manager; J. B. Hundley, secretary-treasurer; George Pendleton, Albert Redding, F. E. Dillon, Mrs. H. E. Church, Mrs. David Coey.

The Raisin Growers' Association this year expects to handle close to 150,000 tons of raisins.

### SHIPPING TOMATOES IN SOUTHERN CALIFORNIA

By R. G. Risser, Bureau of Estimates

Although Southern California has a larger acreage than last year it is not probable that the shipments of tomatoes will exceed the shipments of last year. Much difference of opinion is expressed on the production this year, but there is general complaint and much talk of the crop being short. While some of the sections have been near normal, comments on the other districts indicate that there is not much more than half a crop.

The first car was shipped from Imperial Valley June 4. Then San Pedro Hills put stock on the local market. The first car from Wilmington rolled July 7, and the first from Moneta August 11. El Monte, San Fernando Valley and Orange County have recently started shipping and will continue for a month or more if the weather is favorable.

The number of cars yet to come from the principal shipping points is estimated as follows: Gardena-Moneta, 50 cars; San Fernando Valley, 30; Orange County, 200; Newmark, 15; Escondido, 40; total, 335.

It must be understood that weather conditions at this season are uncertain and heavy rains or frosts would cut the crop short.

Worms which are usually troublesome in the tomatoes (especially the first ones to ripen) have caused more loss than in past seasons.

ESTABLISHED IN 1889

JOHN S. ARMSTRONG  
PROPRIETOR

THREE HUNDRED ACRES  
WEST DESSAU STREET.

Ontario, California,  
October 18, 1917.

**To Our Customers:—**

Many a man sold his fruit this year for more than his land cost him. This means a big acreage will be planted—a big demand for trees.

And already the stock is showing up short. So we say to our friends—place orders early.

Take peaches—or apricots—or walnuts, you yourself know of cases where this year's crop more than paid for the land. Lots of these folks plan to plant. And some will have to go without.

The wise ones are placing orders now—here's a letter from Moorpark dated October 18th:

"Please book me for 300 and A. H. for 500 Royal Apricots, for delivery January 15th. The trees that I received from you last year proved very satisfactory and made a good growth under unfavorable conditions."

My 28 years in the business counts—I am able to advise. Better let me know, right now, what you're going to want.

We can fill your orders for fruit trees of all varieties, with satisfaction. Don't put off writing.

out in December.

## A Simple Road Problem

What is the repair cost ?  
on your old roads ?

How much would con-  
crete roads cost ?

Your tax receipts will answer the first question. Your county engineer should be able to answer the second. By subtracting the cost of permanent roads from the repair expense for 20 years of poor roads you will find capital for building the permanent type, like the one below:

Sheridan Road, near Kenilworth, Ill.—Built by Edw. Laing, Highland, Park, Ill.  
C. N. Roberts, Chicago, Engineer

THE fact has been established that in the average rural community in the United States, temporary roads' cost to repair and rebuild during a 20-year period, about twice what it would cost to build permanent concrete roads.

**Concrete roads are not an experiment.** Concrete roads are not a luxury. Any community can afford them. No community, from the standpoint of economy, can afford to be without them. Reasonable in first cost, low in upkeep, they immediately become a profit-earning asset of the community.

**CONCRETE ROADS**  
Their Advantages  
No Mud—No Dust  
No Ruts—No Holes  
No Skidding  
Easy Hauling  
Smooth Riding  
Long Life—Safety  
Always Ready for Use  
Low Maintenance  
Moderate Cost

**Be sure you know what a concrete road is**  
Concrete is made of portland cement, sand and pebbles, or crushed stone, and water. It is hard and durable. Concrete is the material used in building concrete dams, factories, bridges, and big engineering works like the Panama Canal requiring great solidity and strength.

Write for a free copy of our Bulletin 136. After you have read it, pass it on to your road officials, then insist that your road funds be spent for permanent concrete roads.

## CONCRETE FOR PERMANENCE

# Styleplus Clothes

## \$17 and \$21

for  
men careful  
of their  
looks and purses

We developed the known-price idea in clothes. We concentrate our volume, lower our costs, give exceptional all-wool fabrics, style and tailoring at moderate price. The popularity of Styleplus Clothes throughout the nation has proved the soundness of our method. Even though Uncle Sam has already required 200,000,000 lbs. of wool for the soldiers, we are able to supply the American public with guaranteed all-wool stylish clothes at known moderate prices. Styleplus Clothes \$17 (black label) excel at that price. Styleplus Clothes \$21 (green label) excel at that price. Style plus all-wool fabrics—perfect fit—expert workmanship—guaranteed wear. Write us (Dept. AB) for free copy of "The Styleplus Book."

## Questions and Answers

ANSWERS BY EDITOR AND STAFF

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

### Colds, Perhaps

Being a reader of the Cultivator I feel safe and at liberty when in trouble to come to you for advice. This time it's our poultry. Our last spring pullets are affected by a sort of gape, followed by a short spasmodic cough or choking spell, generally only of short duration, while others breathe with a wheezing sound continually and cough or choke occasionally; others make no sound, but gape, at the same time stretching their necks and heads forward and upward. Their combs are bright and appetites good. Of a flock of 500, 100 must be affected as above stated.

It is possible that the air passages of some of these birds are partially closed by mold tubercles, the result of eating moldy feed or scratching in moldy litter, but more likely they have all contracted slight bronchial colds which manifest themselves differently in different birds. The best preventive and cure for such colds is the open-front roosting house, fronting south so that the sun may reach the farthest corner, and with no cracks through which drafts may blow. I have never had results from the use of potassium permanganate in the drinking water, but many experiment stations use it. A tablespoon of olive oil or a little pure vaseline often helps to loosen up such a cold, and sometimes a grain capsule of quinine, is useful, but the main reliance must be on sanitation. For severe cases Dr. Salmon recommends a dose of 10 drops spirits of turpentine in a teaspoon of castor oil, repeated in five or six hours.—J. A. K.

### Cure For Egg Eating Hen

If anyone having an egg eating hen can be helped by this please print it. I had a Plymouth Rock hen who would turn and eat her own eggs as soon as she laid them. As she was and still is laying every other day I tried various remedies to break her of this habit. I filled an egg shell half full of red pepper and she gobbled it up and looked around for more. Shaving her bill till it bled did not hinder her from enjoying her egg feast in the least. At last I decided to try H. H. H. Ointment, very similar to Sloan's Ointment. I filled an egg shell with a mixture of H. H. H. and cooked oatmeal. A more surprised or a madder hen never lived. After two doses she was cured and has never eaten an egg since. Indeed as soon as she lays an egg now she walks rapidly away as if afraid it will run after her and choke the loathesome medicine down her throat.—Mrs. Slaughter, Perris.

### Round Worms

Will you please tell me what causes our Buff Leghorn hens to have worms about two inches long and what is good to kill the worms? We are feeding wheat, bran, soaked oats, all the white clover, and Swiss chard they want. Keep them penned. They are not laying much. — Subscriber, Lincoln.

Round worms exist in the intestines of many fowls without doing any appreciable harm, but when they become numerous as to be noticed in the droppings it is time to do something. The latest treatment is that recommended by the University of California. Steep a pound of finely chopped tobacco stems two hours in sufficient water to keep them covered, then mix this liquid and the stems with ground feed enough for half the usual feeding. This is for 100 hens. If your flock is smaller use a proportionate amount.

If you are not in the habit of using moist mash you will have to guess the amount to prepare, only remember there must be no more than birds will clean up immediately or else you waste your medicine.

night before treating give half much feed as usual. Next morning give nothing. At 2 o'clock, when birds are ravenously hungry give medicated mash. Two hours later a little more mash (about half as much as the first feeding) in which Epsom salts (11 ounces to 100 lbs dissolved in water has been mixed). Repeat the treatment in seven days. It is probable that the worms are to the hens being confined in yards which have not been recently purified by a crop of green stuff, and the treatment will be absolutely without result unless the birds are moved immediately thereafter to new ground, for the ground they are on is doubtless infested with them. Remove the birds, disinfect the infected yard with 1 to 1000 solution of bichloride of mercury (corrosive sublimate, 1 ounce to 8 gallons of water). It will take a gallon of this for every ten square feet of yard to penetrate the soil to the necessary depth. The houses should be disinfected.—J. A. K.

### Diseased Liver in Rabbits

Am raising New Zealand Red rabbits for market. Some which I recently killed had spotted livers. Will kindly advise what causes this?—Subscriber, Imperial Beach.

The "Belgian Mare Guide" recommends one-half grain of calomel every 12 hours, plenty of fresh air and comfortable quarters. Townsend's "Practical Rabbit Keeping" says: "The correct feeding and green food in season, particularly dandelion, rabbits rarely suffer from liver complaint. Should the liver become diseased, chronic inflammation set in the patient had better be destroyed and thus out of its misery as the chances of permanent care are exceedingly remote."

### Chicken-pox

Will you kindly tell me how to treat chickens for chicken-pox? At that is what I am told is the trouble. It starts with hard dark spots on the comb and particularly around the eyes.—Subscriber, Nestor.

The simplest and easiest treatment for chicken-pox, which is probably a trouble with your chickens, is the sulphur treatment. Purchase a quantity of old fashioned flowers of sulphur, and mix with the dry mash, using it one-tenth of the mash. Lay this before all the hens, sick and well, for three days, then give the ordinary mash without sulphur for three days, returning to the sulphur mash for another three days. For the hens that are too ill to eat you will have to moisten some of the medicated mash and feed by hand in good sized pieces. If the trouble should prove not to be chicken-pox, the sulphur will be good for the birds anyway, for it is a good blood purifier.—J. A. K.

### Scaly Leg

What is a good remedy for scaly leg?—Subscriber, Nestor.

Scaly leg, if it has not gone too far, can often be cured by repeated applications of lard and sulphur, mixed half and half. If it does not disappear under this treatment try soaking the feet in warm, strong soap suds. The scales are so softened that they can be removed part of them with your fingers or with a soft brush, taking care, however, not to draw blood.

**Saturday, Oct. 27, 1917****OUR ADVERTISERS RELIABLE**

We guarantee our subscribers against loss through dishonesty of any advertiser in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

**THIS WEEK'S COVER**

California's greatest crop of prunes is being handled more economically than ever in the up-to-date packing houses of Santa Clara Valley. One corner in one of these great establishments is shown on our cover this week.

**FERTILIZE**

"Fertilize when fertilizer costs are up as now!" Sure. Fertilize as never before, not because we need the food but because the farmer needs the money which fertilizer makes. Present prices of products and labor create a condition in which only the rich can farm indifferently; the poor will go broke.

Throw her into the high.

**HOGS TO KANSAS CITY**

Imperial Valley papers are filled with particulars of the gathering of carloads of hogs for shipment to Kansas City packing houses. One paper says that although there has been three cents per pound in favor of Kansas City markets there exists at the present moment a range of \$4.10. Top prices at Kansas City will approach fairly close to 20 cents. The cost per hundred of shipment is \$1.50. This leaves a net of around three cents in favor of the Eastern market. Four days are required to make the trip. Of course, only hard finished, grain fed hogs will pay for this shipment. A special train is being made up for the trip and the farm adviser's office is aiding in the campaign which will result in more net money to Imperial Valley producers. It is to be regretted that California conditions do not permit of this stock being packed in this state.

**COOPERATION**

The central thought in the address of President Coates before the Nurserymen's Convention was: "I feel very strongly that the keynote of this seventh annual convention should be and is a better cooperative spirit and understanding between the members of the association, and the building up of the association by largely increased membership, to the end that we may be in deed as well as in word, a power in the land."

The cooperative spirit is everywhere, but the need is no greater in any calling than in the nurserymen's. Energy now wasted might be saved by intelligent cooperative distribution of nursery stock.

**ANTHRAX**

We may prefer to suppress the information, for it is not pleasant to announce that anthrax is general in many counties of the state. Some have been quarantined by order of the

a success because of the packing and failure to "feed" down. But with modern cutters and easy delivery 100 or more feet away from the cutting machine certainly there is opportunity to figure out a degree of profit by the use of modern machinery.

**KEEP BOOKS**

Between December 31 and March 1 "An Annual Return of Income must be made by every corporation, by every single person receiving more than \$1000 net income, and by every person who is the head of a family who receives a net income of more than \$2000."

How many farmers are able to make such return of the preceding year's business we do not know, but surely too many farmers have proceeded by the easy method of "main strength and awkwardness" without knowledge of the why, where and when of the profit and loss.

"Guess so" won't go with these re-

**HAS YOUR SON RECEIVED THIS CARD?**

"War Department

"Official Business.

"You are hereby notified that you have been selected for military service as a part of the quota from Local Board for District.....etc.

"You will therefore hold yourself in readiness to report for military duty at the office of this Local Board at a time to be specified by notice posted at the office of this board in the near future. Notice will also be mailed you, but the posting of notice at the office of the board will charge you with the obligation to report. From the date so specified for you to report you will be in the military service of the United States and subject to military law.

"While as much time as possible will be allowed you, you are hereby cautioned that the necessities of the service may require you to be called on very short notice. You should therefore put your affairs in order to report upon 24 hours' notice."

Signed "Local Board."

A great number of us may not go across, but everyone of us may come across with the money which will increase Uncle Sam's power. Many of us, especially in the West, fail to appreciate the fact that we are at war, and particularly have we failed to put the accent on the right word in that phrase. We appreciate to a very small degree the horrors of the war, but until we realize more fully that we—with strong accent on the "we"—are at war, the country will not be able to accomplish to the fullest the thing we have set out to do.

We must have money; we must have the good will and proof of the determination of the people to unite in this second liberty loan. The three billions must be subscribed before Saturday night. We hope every reader of the California Cultivator will do his bit. Every bank in the state will loan money for the purchase of liberty bonds at the same rate of interest the bonds draw. Buy and pay on the installment plan and prove that we are truly the un-i-t-e-d states.

Farmers have use for every cent of capital, but buy a Liberty Bond; it is good security for more capital to buy more seed to grow more crops to buy more bonds.

Presumably the banker will not loan working capital to the farmer at four per cent; perhaps he will charge seven or eight. At present prices and under present war conditions the farmer is justified in using his four per cent bonds as collateral, borrowing his money and after harvest returning and redeeming his bonds. If they remain at par he is well repaid, but bear in mind United States bonds have almost invariably commanded a premium. Statistics relative to former issues are evidence of future prices and possibilities of present liberty loan 4s.

The 5 per cent bonds issued in 1860 sold at 127 in 1863.

The 4½ per cent bonds issued in 1876 sold at 116½ in 1881.

The 4 per cent bonds issued in 1877 sold at 129½ in 1887.

The 4 per cent bonds issued in 1895 sold at 137½ subsequently.

governor and the state veterinarian. It is a time when we need to be careful; it is a time when we need to use every preventive measure. There is no cure for this dread disease.

As a rule it is not transmitted to man, but there are plenty of cases to show that it is often enough to call for extreme care in handling carcasses or hides of diseased animals. There are many forms of the disease and it calls for expert handling. Therefore cattle owners should keep in close touch with their county veterinarian.

**CUT THE HAY**

A subscriber has said that 25 per cent greater storage is possible where hay is fine cut and stored than where mowed away as cut in the field; also the cost of handling is materially lessened. We know of one dairyman who attempted to mow away finely cut alfalfa in bins something like elevator bins, with chutes and openings at the bottom so that the finely powdered or cut alfalfa might be drawn off in barrows or carts for immediate delivery to the stock. This, however, was not

ports to U. Sam, and the farmer who can point his finger and say, "Here's exactly what I did and here's what I didn't" may save himself loss.

When one buys a thousand dollar bunch of steers, then borrows a thousand dollars to buy feed and employ labor to care for them, then sells the bunch for \$3000, he doesn't want to pay income tax on the entire \$3000, or, in other words, on his capital, expense and income combined. When he knows his items, justice will be secured.

By the way, the Cultivator Account Book is one of the simplest and best books for the small farmer.

**NATHAN WESTON BLANCHARD**

One of California's finest, one of the earth's finest, Nathan W. Blanchard, has passed. A pioneer in the state, coming by the way of Panama in 1854, he has been responsible for its development as have few others. He was often called the father of the citrus industry, being one of the first to engage in it in Ventura County, in 1872. Prior to that, however, he had purchased a large tract of land

and laid out the townsite of Santa Paula. Realizing the importance of the citrus industry he later purchased a large tract of land and organized the Limoneira Company which is one of the largest lemon and walnut holdings in the country, and has always been a regular attendant at state fairs, growers and other conventions. With Mrs. Blanchard, presented at Santa Paula the beautiful public library building which now adorns that city. He was one of the original board of trustees of Pomona College, and, we believe, continued in that office until the time of his death. He has represented his district in the state legislature.

With all his connection with California's material advancement, he in every way in his power advanced social and religious interests. He was past 86 years of age, but we had hoped he might remain with us many years longer.

**Agricultural News Notes**

The navy yards are utilizing metal and old rope.

America is making war locomotives for use in France at the rate of 100 a day.

Tuesday is "beefless day" on diners and restaurants of many of the railroads.

Canada's wheat crop is estimated at 250,000,000 bushels, an increase of eight per cent over 1916.

The United States has bought most the entire output of onion from the Canary Islands.

Egypt and India are investigating the various schemes for establishing cooperative banks for farmers.

The white potato crop in the United States this year by latest government estimates is 467,289,000 bushels.

Nurserymen of Texas, Arkansas, Oklahoma, New Mexico, Louisiana and Old Mexico have organized the Southwestern Nurserymen's Association.

The Portland Cement Association has asked that carriers be required by law to give preference in supplying cars to those shippers who load, test and release cars most promptly.

Carload shipments of grapefruit going forward from Florida but changes are not expected to start until the first of November. Crops are generally normally advanced for the season.

Growers of the Canary Islands are arranging to make shipments to New York of winter tomatoes. The success of the venture depends on sailing ships. These tomatoes were formerly marketed in Liverpool.

The 5th National Corn Exposition will be held in Columbia, South Carolina, January 27 to February 3. In addition to exhibits of grains and grasses there will be demonstrations of implements and equipment of all kinds.

The shortage of cattle feed in California has induced use of ground flax bolls and dried potato peels. High prices and doubt as to the wholesomeness of these substitutes has caused the government to conduct investigation and fixing of prices.

The Canadian government announces the sale at post offices of special war savings stamps. A card issued having squares upon which 25 cent stamps and one ten cent stamp may be placed as purchase. When filled the cards will entitle holders to \$10 at the end of three years.

# Agricultural News Notes of the Pacific Coast

## Northern California

Butte County has bought \$100,000 worth of liberty bonds.

Farm Adviser C. J. Williams of Sacramento County has been given an assistant.

The Poultry Producers of Central California has decided to buy feed for members.

The proposition to establish paper mills to work up rice straw is interesting Oroville.

Placer County olive growers are receiving offers of \$140 a ton, orchard for Missions and Manzanillos.

There will be local center meetings the Sacramento County farm bureau at Hood, October 24; Franklin,

The almond crop of Colusa County all harvested. Very few shipments have been made because of scarcity of rain.

The Sacramento County farm bureau is sending out Vol. 1 No. 1 of the Sacramento County Farm Bureau monthly.

At the recent meeting of the Pacific Growers' Association in Sacramento the minimum price was fixed four cents.

Olive growers in Butte County are somewhat alarmed over the labor situation. The picking season is upon them and labor scarce.

Horticultural Commissioner Mills says that the grape industry of Sutter and Butte Counties is doomed unless vitloxera resistant roots can be obtained in large quantities.

It is announced that all box factories of Northern California have entered into an agreement with the government to furnish box shooks to fruit men at prices set by the government.

A number of farmers in the Dixon district of Solano County are using portable alfalfa meal grinders. Where there is plenty of hay the farmers say it is better to grind in the field than bale.

The annual meeting of the Humboldt County Stockmen's Association is held at Ferndale, October 6. Dr. Hart of the University of California delivered an address on the diseases of range cattle.

From Calistoga comes the report that for the first time in many years the grapes in the Upper Napa Valley are too sweet and simply refuse to ferment, thereby causing the wine-makers to buy large quantities of new grape.

## Central California

Several cases of anthrax have been reported in Stanislaus County.

The great Pine Flat irrigation project is steadily growing in favor.

Tulare County expects an exceptionally good navel crop this season.

The grape crop is now being moved at the rate of 200 carloads per day.

Oakdale, Stanislaus County, has harvested about 600 acres of beans this year.

Stanislaus County has a cow testing association with a membership of 41 dairymen.

Directors of the Oakdale Irrigation System expect to expend \$50,000 in improvements.

The Kern County farm bureau will hold local meetings at Manteca on the 19th and Live Oak on the 22nd.

It is reported that the Ridge Route between Los Angeles and Bakersfield will be paved before next summer.

Twenty-seven thousand carloads of

## Southern California

Hemet expects to ship 18 carloads of beans.

Many ranchers of the Imperial Valley are planning to erect silos.

Shipments of citrus fruit from Riverside to October 1 total 4184 cars.

Palo Verde made a cotton exhibit at the Riverside County fair held last week.

The Walnut Growers' Association of Hemet expects to handle 150 tons of nuts this season.

The plan of the Banning Cannery to can apples has been abandoned owing to shortage of cans.

Walnut and bean growers of the Carpinteria Valley are happy over prices being received.

It is estimated that Imperial Valley's cotton crop the coming season will be about 70,000 bales.

The Dehesa post office has been discontinued, mail now being distributed from the El Cajon post office.

## The Coast

Nampa, Idaho, has an exceptionally fine crop of apples.

A new apple juice plant has been installed at Lewiston, Idaho.

Fifty new silos have been built in Ada County, Idaho, this year.

Alfalfa hay is selling in the stack in Minidoka County, Idaho at \$15.

Yuma, Arizona, is to have a cotton carnival beginning November 27.

Idaho County, Idaho, has begun a campaign to secure a county agriculturalist.

A new fruit drying plant is to be built at Wenatchee, Washington, and another at Zilla.

Colorado poultry raising sections report a small crop of turkeys being raised this year.

Live stock worth \$100,000 was shipped from Wallowa County, Oregon, on one day recently.

A farmers' week and boys' and girls' club exhibit is being held at Caldwell, Idaho, this week.

Quite a number of silos have been erected in the Enterprise section of Oregon this summer.

Pima Indians of Arizona will hold their annual harvest fair at Sacaton, October 31-November 2.

Potato shippers of Colorado have formed an organization to cooperate with the food administration.

Orchardists of Apple Valley, Idaho, have incorporated an association that will market crops of members.

The total yield of Jonathan apples in the Wenatchee Valley, Washington, will be more than 1200 cars.

The cotton crop in the San Pascual Valley of Arizona is very good, much of it promising a bale to the acre.

A \$10,000 sale of Holsteins was recently made at Yakima, Washington. The average price received was \$160.

Idaho will harvest 6,000,000 bushels of potatoes according to estimate of the federal bureau of crop estimates.

The Wenatchee Valley is harvesting its Jonathans. The quality is reported excellent but the fruit has colored slowly.

Manufacturers of canned milk have voluntarily put themselves under the control of the United States food administration.

### MORE POSTAGE, PLEASE

Mail your letters November 2 and thereafter with three cents postage; your postcards with two cents. The same rates apply to mail to Canada, Mexico, Cuba and Panama. Rates on foreign mail are fixed by international treaty and remain as heretofore. Drop letters, whether delivered by city or rural carrier, require only two cents; postcards, two cents.

fruit have been shipped from California to the East during the last three months.

Under the present state law all fumigators and sprayers of orchards and vineyards must have county licenses.

The Stanislaus Poultry Association is planning for its annual show to be held early in December. Pet stock entries will be admitted this year.

Scarcity of grazing land and high price of feed in the Oakdale section of Stanislaus County is forcing many cattlemen to sacrifice young calves.

J. W. Jeffrey of the state viticultural commission has taken an exhibit of table grapes from the Dinuba and Alta districts to the San Francisco Land Show.

Dinuba table grape growers have been aroused by the car shortage this season and plan another year to have a cold storage plant that will insure them against loss from such source.

Carpinteria Valley schools were dismissed for two weeks so that the children might help with the walnut harvest.

Alfalfa and cotton occupy about the same acreage in Imperial Valley and stand at the head of the list of profitable crops.

At the last meeting of the Perris farm center Prof. Jacobson of the United States department of agriculture gave a demonstration of preparing grain to poison squirrels.

At the recent meeting of the Tri-Counties Reforestation Committee, held in Riverside, Chairman Cuttle urged the necessity of cooperation in handling the flood waters of the Santa Ana.

Local associations affiliating with the California Lima Bean Growers have been formed at Owensmouth and Van Nuys in the San Fernando Valley. This brings the number of local associations up to 13.

READY FOR  
SERVICE

# Moorland Sir Cristeria

FOR 1000  
DOLLARS

Born November 1st, 1916

The average per cent of fat of his three nearest dams, 5.16, is not excelled by any sire on the Pacific Coast.

The seven day records of his five nearest dams average, butter, 29.37 pounds.

He is a son of COLANTHA SIR PONTIAC AAGGIE, one of the four leading sires of California, who is the sire of 14 A. R. O. daughters, seven above twenty pounds, one a 32.87 pound Junior Three-Year-Old whose average test was 6.33 per cent. One of his sons won first at the California State Fair this year.

His dam, LADY CHRISTERIA MECHTHILDE, was selected by Messrs. Hughes, McAlister and Morris for the December Guaranty Sale, and has a record of 26.93 pounds butter; she is by De Kol Spofford Promise and from CRISTERIA OVERTON MECHTHILDE 3RD, who has a record of 28.43 pounds butter.

He is ready for service, well grown, long-bodied, more white than black and unquestionably a youngster of exceptional promise.

## Who's Who

With the issue of August 11 the Cultivator started its series of "Who's Who" articles to bring before its readers some of the livestock producers of California who are responsible for the large development of the industry. Where did they come from and how long have they been engaged in California development, also how do they look, so pencil and camera are to be used, and some homely, everyday photographs and notes regarding them will bring us closer together. Bear in mind we say "homely photographs" and not photographs of homely people. The idea we wish to convey is that so far as possible we will secure photographs in everyday surroundings at the homes of the livestock producers.

Written for California Cultivator By C. A. Briggs

**C**ALIFORNIA won a good clean cut American farmer and live stock breeder and Montana lost one when Homer Hewins, Jr., manager of the Maplewoode Ranch, Calistoga,

Homer Hewins, Jr.

left the northern state for the state of Heart's Desire.

Mr. Hewins was born in Helena,

Montana, October 2, 1883, living there for 17 years. After moving to California he attended Dunn's Preparatory School at Berkeley, entering the University of California at Christmas, 1901, taking the electrical engineering course, but making a specialty of studies in agriculture and stock breeding. After his university course he spent a year in Montana, and then returned to San Francisco where he engaged in the general mercantile business for four years. In February, 1909, Mr. Hewins married the youngest daughter of Mr. and Mrs. Martin Holje of San Francisco. Since that time he has been the active manager of the general farming operations of the Maplewoode Ranch, the home of Mrs. Holje.

In 1914 he started in the breeding of pure bred stock, Berkshire swine and Holstein cattle and now has a number of exceptionally fine animals of both breeds.

Mr. Hewins is an enthusiastic breeder. He is building up a reputation for square dealing and is well liked by breeders and buyers. This state is rapidly coming to the front in live stock matters and the influence on the business of the efforts of our younger breeders like Mr. Hewins is now placing and will in the future, keep the state in the front ranks of the industry.

## Silos and Silage

From Address by Chas. A. Crate at California Creamery Operators' Convention at Petaluma

**B**ECAUSE of the demands for beef and the shortage of forage in all of the warring European countries the number of dairy cattle has materially decreased in the past three years. Recent reports from the French government show a decrease of about 17 per cent in cattle, 33 per cent in sheep and 38 per cent in hogs, while the combined record of the European nations show a decrease of over 28,000,000 head of cattle alone.

Conditions do not seem to be any better in the United States for according to government statistics the number of cattle in the United States decreased some 16,000,000 head in the six years intervening between 1907-1913, while it is estimated by leading authorities that the decrease in the past three years has been equally as much or approximately a 20 per cent decrease.

The principal cause of the decrease of the number of cattle in this country in the past three years is the heavy demand for beef coupled with the shortage of mill feeds and in many sections the shortage of forage with consequent all around high prices. This has resulted in many dairy herds being deliberately sacrificed to the butcher.

Another contributing factor to the present cow shortage is the practice of slaughtering calves for veal. In the whole milk sections the price received for the milk has been such that the dairyman has felt he could not afford to raise even the heifer calves, and this feeling has been intensified for the past two years by the unusually high prices for feed, with the result that more calves are being sacrificed now than formerly.

An analysis of the situation as it exists must lead all to conclude that the ending of the war will bring a demand on this country for dairy stock for shipment to Europe that we will not be able to fully supply, with the result that prices will be exceedingly high.

The problem that confronts us is:

First, cheapening the cost of production; second, increasing the stock carrying capacity of the land; third, improving the quality of the dairy stock; fourth, raising the heifer calves. The accomplishing of the first two will in a measure automatically bring about the latter for if the dairyman has progressed to that extent he will appreciate the advantage of better stock and will be more disposed to raise the heifer calves for they will be worth more.

**The Silo is the Solution**

The silo is the solution to both reducing the cost of production and increasing the stock carrying capacity of the land, for it will provide the equal of the very best of rich juicy green grass for all the year round and when fed in conjunction with a legume such as clover or alfalfa hay will permit the almost entire elimination of the mill feed expense bill and still maintain the maximum production.

The crop grown for silage and fed as such, regardless of what it may be, will feed from 25 to 40 per cent more stock than when harvested in any other manner. This, for the reason it is cut at a period when it has reached its greatest feeding value, is succulent and all of the forage is utilized which is not the case either in soiling or where allowed to mature and only part is harvested and fed dry.

**Silo Must be Air and Water Tight**

The making of silage is like the canning of fruit in that both the silo and the fruit jar must not let the juice leak out, as if they do there will be spoiled feed and spoiled fruit.

The silo that will serve you best and pay a good return on the investment must be of proper design, material, and workmanship so that it will be air and water tight, and that it can be kept so for a period of years without it being necessary to rebuild it every time it is filled.

**Value of Feed Greater Than Cost of Silo**

The value of the feed put into the

## Flush Cows After Calving

Protects Against Abortion and Barrenness

Barrenness or Sterility, like Abortion, retention of After-birth and Premature birth, is nearly always caused by infection of the reproductive organs by the germs of Contagious Abortion. Unless infection is promptly overcome by use of a powerful but safe antiseptic, may permanently affect the reproductive organs so that the cow will continually fail to stick.

Every time a cow drops a calf—whether alive or dead—by premature birth or aborting, whether the after-birth is retained or not, her reproductive organs could be flushed out, because that is where the infection is developing.

B-K, the powerful non-poisonous antiseptic, is scientifically correct for this work. Used as a douche the uterus, it quickly brings the after-birth, dissolves the slimy albuminous matter, kills the germs, discharges and controls the infection. B-K is not cause straining, but is soothing and heals.

Other germicides such as carbolic acid, cresol, caustic soda, iodine, etc., tend to irritate, do dissolve the slimy albuminous matter, but tend to coagulate or thicken them, thereby preventing destruction of the germs and cleansing of the tissues.

The remarkable germ-killing strength of B-K is fully marked and guaranteed on every package. It contains no poison, acid nor oil. It is safe and easy to use. B-K may be used freely in drinking water.

B-K is convenient. Just add water as directed. You have your treatment for calves, bulls and cows and also your disinfectant for general use. B-K is used so successfully by leading breeders that it is now sold over the entire world and the demand for it has increased 500 per cent in three years. A well known breeder of registered stock says:

"I want B-K for I know it is doing good. Cows that have been barren for more than a year are getting with calf."

B-K is sold by dairy and farm supply houses, druggists, general stores, etc., everywhere. Dealers wanted in every town.

Write us for more evidence from users and for our bulletin No. 52, "Contagious Abortion," and No. 136, "Calf Scours."

silo every time it is filled is greater than the cost of the silo. Now if through faulty design, poor material or workmanship the silo leaks and spoils a portion of the feed, the loss is quite likely to be greater than the difference in the cost of a good silo and a makeshift, the latter being dear at any price.

The history of silo building in the East and Middle West is replete with failures; not because silage was a failure, but because of the many inferior cheap silos that were put up in the mistaken notion that almost anything would do.

### Save the Wasted Dry Feed

Another means of conserving the feed available is by finely cutting dry feed instead of feeding in the bulk. The waste when feeding in the bulk especially where the hay is coarse and stemmy ranges all the way from 10 to 40 per cent all of which can be eliminated by cutting it up with the same machine you will use for filling your silo. The feed cutter of today is not merely a machine that you will use a few days during the season but because of its adaptability for cutting not alone all kinds of green feed, but dry feed as well, including the making of an excellent grade of alfalfa or bean straw meal at a cost much less than half of that for baling, it is an all the year around piece of equipment.

Another advantage in cutting dry feed is that it requires less storage space than hay in bulk and the expense of handling is much less.

### Alfalfa Meal and Bran

It has been thoroughly demonstrated in practical experiments, that alfalfa meal which you can make with your own cutter at less than a dollar per ton for cost of labor and power is practically the equal of bran when fed in connection with good corn silage to milk cows. The results of such a test made at the Nebraska agricultural experiment station is given in a leaflet that may be had for the asking.

### Alfalfa Meal and Buttermilk or Skim-Milk

One of our creamery managers recently told me of the excellent result obtained by the use of alfalfa meal which they had made themselves when fed to hogs in connection with buttermilk from the creamery. This institution has always kept a careful record of the cost of their hog lot, consequently were in a position to make comparisons of results that were conclusive.

Where the ration for stock hogs was alfalfa meal and buttermilk as compared with alfalfa hay and buttermilk, the gain in favor of the alfalfa meal and buttermilk lot amounted in weight to more than \$1.00 per head when sold on the basis of the market two years ago. Both lots of hogs were of about the same age and size and fed the same length of time, both lots being finished on a grain ration additional to the alfalfa and buttermilk.

Creamery managers, it is to your interest as well as the interests of your patrons that you induce better methods among the dairymen, for to do so will increase the production of milk and improve and foster the dairy industry. This you can do by encouraging better breeding and better feeding. The farmer should be encouraged to raise his heifer calves as this will result in more dairy cows in the future. He should also be induced to put up a good silo and provide a succulent feed for all the year round and as well shown how he can eliminate the waste of dry feed by cutting it up and thus enable the keeping of more stock with consequent larger supply of raw material for the creamery.

### MILCH GOAT BULLETIN

Bulletin No. 235, "The Milch Goat in California," written by Edwin C. Voorhies, is now being distributed by the agricultural experiment station of the College of Agriculture, Berkeley.

It is only a 30-page bulletin but filled with the most complete information regarding milch goats in California yet gathered together. It gives general information concerning milch goats, following with discussion of various breeds, quality and composition of goat milk, various uses, cheese making, feeding, goat houses, milking and general care.

Don't cry over spilled milk. Stop spilling it.

**Sacramento  
California  
Wednesday  
December 5  
1917**

Selections have been practically completed for the history making offering of registered holsteins at Sacramento on December 5th.

At least eighteen of the famous herds of California will be represented in this sale, and the breeders have kept their pledge to permit the Committee of Selection to go into the tops of their herds.

There will be six or more 30 pound cows in this sale!

There will be fifteen or more daughters of 30 pound cows!

There will be a large number of great yearly record cows and daughters of great yearly record cows!

There will be daughters of Prince Gelsche Walker, King Mead of Riverside, It, King Segis Pontiac Alcartra, King Walker 5th, Tidy Abbekerk Prince, King Korndyke Sadie Vale, King Segis De Kol Korndyke, Segis Pontiac De Kol Burke, King Segis Pontiac, Prince Gelsche Walker Korndyke, Annie De Kol Lakeside Model, Aralia King, Korndyke Queen De Kol's Prince, King Korndyke Pontiac, and King Morco Alcartra, out of dams of outstanding breeding.

There is not a female of milking age in this sale that has not a good A. R. O. record; there is only one female of milking age in this sale that has a record below 20 pounds butter in seven days, and that one is a carking good heifer that made 19.63 pounds butter in seven days as a senior yearling.

## Bulls

Only a few bulls will be sold, and these include:

A son of King Valdessa out of the world's record 35 pound first calf heifer.

A son of the California champion junior three year old Miss Valley Mead De Kol Walker, 36.82 pounds butter in seven days.

A beautiful son of King Mead of Riverside out of a 33 pound dam. A show bull and nearly white in color.

A show quality son of Spring Farm King out of a 31 pound dam.

A son of a great 32 pound cow that will make around 1200 pounds butter this year.

A son of a 25 pound three year old daughter of a 34 pound cow, and sired by one of the best bred sons of Prince Gelsche Walker.

Every animal over six months of age has been tuberculin tested AND IS SOLD SUBJECT TO TUBERCULIN RETEST BY THE BUYER WITHIN SIXTY DAYS OF DATE OF SALE.

The breeders contributing to this sale have permitted the selection from their herds of animals that they part with only very reluctantly, but have accepted it as a duty to the advancement of the dairy industry to participate in this offering which has been arranged to meet the insistent demand for the highest class of registered Holsteins.

There will be much to study in every pedigree of the catalog of this sale and we will mail one to everyone who writes requesting it.

## Land Show • Livestock Exhibit Score Success

Written for California Cultivator By F. F. Stonerod

THE biggest single feature of the Land Show at San Francisco last week was the live stock tent. The biggest feature of the live stock show was the interest in the judging ring from the opening to the closing day. Thousands of people sat in the stands and marveled at the beauty of dairy animals as they were led to and from

carloads of choice Jerseys for the San Francisco show. Nixon, Welch, and Smith sent in their full, Guernsey herds; Napa State Hospital, Buena Alta, Susaeta, and Stenzel filled the Holstein space, while Baile, McFarland made his usual classy show of Ayrshires. In quantity the dairy show was not to be bragged about; in quality it was.

The following championships were awarded in the different classes:— junior and grand champion Holstein bull, F. A. Heroux on the senior bull calf, Model Domino Glista; senior and grand champion cow, Napa State Hospital on Hazelwood Hello Queen; senior champion bull, Napa State Hospital on Lord Asa; junior champion female, F. A. Heroux on Rosa Burke.

Guernseys: Senior and grand champion bull, Nixon on Imp Itchen Daisy's May King of Langwater; junior champion bull, Nixon on Ricardo of Edgemoor; senior and grand champion cow, Welch on Imp Argie of Linwood; junior and reserve grand champion on cow, Welch, on Theodora of Hidden Valley.

Jerseys: Senior and grand champion bull, Thorp on Imp of L; junior and reserve champion bull, Thorp on Jolly Senator Raleigh; senior and grand champion cow, Locke on Valets Golden Biddy of L; junior and reserve grand champion cow, Thorp on Nomie of Mossdale.

Several surprises were sprung on the exhibitors by the judge who reversed other judges' decisions on the same animals, but that is nothing new. Mr. Gillette was impartial and rendered his decisions with care and study. He is a pupil of Prof. Kildee who gave so much satisfaction at Sacramento this year and he proved a very capable and likable judge.

McFarland's heretofore unbeatable Ayrshire cow, Willowmoor Vesta, lost championship and first in class to her stablemate, Willowmoor Happy Girl. This cow also was awarded the prize for champion dairy cow of the show although we often wonder why such a class is made, as winning the prize does not accomplish anything in particular. If the prize read "the best cow of her breed" or "highest butterfat producer," there would be something tangible to work on. A. J. Welch showed his aged cow, Argie of Linwood, and beat Nixon's great cow, Clatford Fay of the Mill, who had beaten her in Sacramento, but in this case the expected happened. Both are wonderful show cows but Argie is now in her prime and Fay is slipping, especially in the udder. It was no disgrace to the Nixon cow to get beaten. Judge Gillette liked Mr. Nixon's bull the longer he looked at him. This bull is the perfect dairy type if not the ideal show type and has a world of style and masculinity.

The Dairymen's League, which supplies New York City, has issued a price of \$3.34 per 100 pounds for milk to the producer, delivered to the shipping station for November. This price is for "B" grade milk three per cent fat and four cents per hundred pounds additional for each one-tenth of one per cent butterfat in excess of three per cent.

Winners at Land Show

Top: Valets Golden Biddy of L, 259973, senior and grand champion Jersey cow, property of N. H. Locke.

Center: Hazelwood Hell Queen, 204336, senior and grand champion Holstein cow, owned by Napa State Hospital.

Lower: Willowmoor Robinhood 32nd, senior and grand champion Ayrshire bull.

the ring. They listened eagerly to the splendid talks made by Judge Gillette of the Iowa University. After he had tied the ribbons in each class they swarmed into the live stock tent from 10 o'clock in the morning till 10 o'clock at night, and the management had to close the doors for an hour each evening to enable the herdsmen to feed and water their animals. If all these things spell success then the Land Show live stock exhibit was more than a success the first week, and as this is written the tent is filling again with the beef cattle, the university farm and horse exhibits, and the crowds are simply immense. To those who are responsible for this first show cannot be given too much credit and praise. J. M. Pickering, chairman of the live stock committee, Jos. E. Painter, manager of the live stock department, C. Fatjo, Mr. Harigan, and numerous others worked night and day to make the show a success—and they did.

Stanislaus County Jersey breeders got together and made up a couple of

## SEPTEMBER WORK IN COW TESTING ASSOCIATION

We have just received from Prof. Woll performance of the various contestants for the Cultivator \$300 prize money for the month of September excepting, as noted, for one dairy, figures are not yet available. Prof Woll writes:

The following records of the average production of butterfat for herds entered in competition for the California Cultivator prizes for the month of September have been received.

### Herds of Less Than 25 Cows

Name	No. of Cows	Ave. Pounds Butterfat Per Cow
A. Ambort	19	34.34
F. Beebe	18	35.15
J. W. Coppini	22	48.70
C. Darnell	10	28.92
L. Hess	8	18.75

### Herds of 26 to 50 Cows

Iver Iverson*		
F. J. Kell	27	26.17
G. E. Trigg	35	44.70

### Herds Over 50 Cows

Coppini & Coppini	59	36.17
John Hansen	100	36.67
W. Terkelsen	52	42.55

\*No report.

The number of cows given for each herd includes all heifers or cows in milk during the full month and does not necessarily indicate the group in which the herds will compete for the three Cultivator prizes. The award of these prizes for the highest average production of butterfat for one year by herds belonging to a cow-testing association will be based upon association records for all heifers and cows in milk in the herd for six months or more during the record period.

## WESTERN DUROC ASSOCIATION

President W. W. Everett of the Western Duroc Association writes:

"The Western Duroc Association, which was formed last May at Davis when a meeting was called by prominent breeders of the popular red hog, held an important meeting at Sacramento during the state fair session. The new association had as its guests President McLain of the National Duroc-Jersey Record Association and R. L. Hill, field secretary of the same national organization. Both of these officials expressed the feeling that the Western Association would eventually prove a powerful factor in the control of Duroc-Jersey interests throughout the entire West.

"The officers of the Western are: President, W. W. Everett, St. Helena; vice-president, R. K. Walker, Devore; secretary, Haydn Smith, Woodland; directors: J. E. Thorpe, Lockeford; F. M. Johnson, Napa; James McDonnell, Redwood City and C. N. Slocum, Wilows.

"The National Duroc-Jersey Record Association has given the new Western organization its hearty approval and has requested the latter to take charge of the Record Association's western business interests as far as consonant with the policies of the eastern body.

"Membership in the Western Duroc Association may be had by any breeder of Duroc registered hogs who will send in his name to the secretary, Haydn Smith of Woodland. It was originally intended to elect the new members before they were notified of their selection but it has now been decided to open the lists to every breeder; the continuance of whose valuable membership will depend entirely upon the manner in which his business is conducted. Buyers of registered Duroc hogs will soon come to appreciate that they are entirely protected by the Western Association when dealing with one of its members.

"With the cooperation of the great national Duroc organization and of the Coast's stock and agricultural papers, the new association seems destined to accomplish that for which it has been incorporated. The next meeting will be held in Sacramento at an early date so that applications for membership should be sent at once to the secretary.

Don't be content with doing your bit for the country; do your best.

"If you can't put a gun on your shoulder," says the Indiana state council of defense, "put a silo on your farm."

## Farm Upkeep adds to Your Income

**I**T is better business to add a little to your upkeep cost than subtract a big sum later on for repairs and new equipment. Economy never means neglect. When your barn needs paint and you put off painting, the weather is taking a certain value out of it, which, if left too long, is as real a money loss as a hail-destroyed field of grain.

The Sherwin-Williams Company makes a specialty of farm paints and varnishes that protect. Each is made for a particular purpose and made in such a way that it best meets the kind of wear that each surface gets. For the metal parts of your windmill, farm machinery, iron fences and all metal surfaces, use S-W Metalastic. For your house use S-W House Paint, for your roofs use S-W Shingle Stain and for your barns and other outbuildings use S-W

## Commonwealth Barn Red

This is a durable, weather-resisting paint for rough or smooth lumber. It spreads easily, covers well and sinks into the wood so thoroughly that the weather hasn't a chance to get in anywhere and start trouble. Each can is full U. S. standard measure and is, therefore, far more economical than the many short measure, poor quality barn paints sold at a low price.

*Our booklet "The ABC of Home Painting" tells you how to paint everything in and around your farm. Send for a free copy.*

## The Food Situation in France

By Fred B. Pitney

This article points out how and why the French army receives better food than the civilian population, also some of the methods used to stretch the rapidly disappearing supplies of grain and meat. The agricultural machinery in France is also in bad condition as a result of a shortage of mechanics to keep it in repair and of the cessation of imports of new machinery from the United States. The third and last article in this series will appear next week.

HOW many times I have heard soldiers on leave from the front say, "I would rather have our bread at the front than your bread here in Paris." The same thing was true of coffee. Soldiers would say, "What do you call this stuff? We get real coffee at the front."

At the rear the civilians drank a compound from chicory, for the coffee supply was short, while the real coffee was reserved for the army. In like manner the soldiers get a purer wheat flour than do the civilians. The wheat supply being so much curtailed two measures have been necessary to try to increase the amount of flour.

A law has been passed requiring the mixture of 30 per cent of other grains with wheat in making flour, while another law raised the percentage of extraction permitted in the manufacture of flour. Before the war this percentage was 70, it has been raised successively to 74, 77, 80 and 85. Seventy-seven is the extreme limit of nutritive extraction. After that the flour becomes permeated with particles indigestible for human beings.

The result of mixing grains and high extraction has been a flour that is often not only unpalatable but indigestible, and it has caused not a little sickness, particularly gastric troubles among the children. Adults frequently throw away the soft inside of the bread and eat only the hard baked crust. Very often I have found this "war bread" an unpleasant dark brown in color with a soggy, glutinous inside. It is no one's fault. It is the best that can be done under the circumstances.

### Shortage of All Cereals

Another problem enters with the authorization to mix other grains with wheat in making flour. It is the shortage of the other grains. For it is not only wheat that is short in France but all cereals. We can have recourse once more to the official figures.

The annual consumption of barley in France before the war equalled approximately 1,250,000 tons, of which about 15 per cent was imported. The production has fallen off to such an extent that nearly one-third of the barley had to be imported last year. This year the production will be slightly higher, but there will still be a deficit far above the normal. Furthermore, the deficit in barley must be considered not only in relation to the normal consumption, but with regard to the fact that it must be used very largely to supplement and replace wheat.

With rye the normal consumption was about the same as for barley, with imports of about eight per cent of the requirements. In 1915 the production was about 400,000 tons under the normal consumption and in 1916 it was about 350,000 tons under the consumption, while in both of those years there were practically no imports. Thus there was less rye than was needed and rye could only help out wheat by reducing still further the amount given to its normal uses.

The annual consumption of corn averaged 1,150,000 tons, about one-half being imported. The proportion of imports in 1916 had risen to two-thirds.

The annual consumption of oats before the war was 5,500,000 tons, of which 500,000 tons were imported. In 1916 the imports rose to over 1,000,000 tons and the stock was still short 500,000 tons.

### Agricultural Labor Shortage

When one travels over France one speedily learns the reason for the shortage in the grain crops. It is because there is not the labor to do the farm work. Cultivation has to be left to the old men, the women and the children. All others have been taken for the armies and the defense of the country.

In crossing and recrossing the French agricultural regions it has

been a continual source of wonder to me how the few workers in the fields have been able to produce the crops they have achieved. One sees plows with the handles held by women and the horses led by small boys, women stooping among the long rows of corn, cultivating the ground, groups of women slowly crossing the fields, creeping on their knees, painfully tending the newly planted crops. Occasionally one sees a white bearded patriarch among the women. I should say that the proportion is roughly one man to six women. This, however, is by no means an official figure. It is only my own rough guess.

There is no wonder that with this tremendous shortage in labor, fields are left bare, while those that can be cultivated produce less than the normal amount per acre. What would our western farmers think of turning the land in the spring with long bladed hoes? Yet I have seen this very thing being done in many parts of France because of the dearth of agricultural machinery.

### Farm Implement Shortage

Most of the farm implements of France before the war were of American make. One saw the American mark on the plows and harrows, the rakes and reapers and binders and threshers all over France. Since the war much of this machinery has deteriorated sadly and a great part of it is entirely unfit for use because there are not the mechanics to keep it in repair, and there has not been the importation of new machines and parts to replace the old and worn out pieces.

France is a country at war, very really and terribly at war. The invader is on her soil. Her mines and furnaces and factories are in German hands. Her richest manufacturing provinces are held by the enemy. Her men must go to the trenches to defend their country and drive back the hordes from across the Rhine. And those men of the armies must be fed and have the means to fight. Above all, they must have arms and munitions, big guns and shells.

### Resources Have Suffered

Every thought of France for three long years of a bloody and sacrificial war has been given to "les braves" at the front. Little has remained for the civilians at the rear, who have borne their trials in stoic calm for the sake of the soldiers in the trenches. And in those years the resources of France have suffered, especially the farm resources, for imports have had to be directed to the army. The steel brought in has been for shells, the machinery to make more shells and guns. The plowshare has been beaten into a sword, while the reaper has rotted idle in the fields with only the hands of women and children to tend it.

Now, France needs grain. She must have grain to make bread both for soldiers and civilians. And only America can supply it. The burden of victory lies as heavily on our western farmers as on the soldiers on the battlefields of France.

### STUDY OF NATURAL RESOURCES

In commenting on neglect of Australian forest resources the Maryborough Advertiser of Victoria says:

"South Africa is busily engaged in showing us what an improvident people we are with regard to our timber asset. Through the neglect of our wattle plantations, valuable for export and home consumption, prices have gone up for wattle bark here (bark of acacia used in tanning). South Africa got seed of this tree from Victoria years ago and now supplies the European market and even sends bark to the Australian states, including Victoria. Was there ever a more severe and complete indictment of a public policy? We may go to the same lengths yet in regard to our eucalyptus, for California plants these valuable trees in millions, while we neglect them and experiment with pines, which often do not succeed."

# The Case of the Runt

Written for California Cultivator By Jean A. Koethen

**A** RUNT is evidence of a blunder somewhere, one of the unfit which ought not to survive, but which still has too much vitality to slip quietly out of existence. Almost every flock of chicks contains one or more. Some of them drop off in the first few weeks; others linger on, crow-headed, half feathered, short-backed, to an age and size when they are consigned to the frying pan.

In every flock some chicks seem from the first a little larger, a little more vigorous than the average. These are the chicks that are always first at the feeding trough, first out from under the mother's wings in the morning and last to seek them at night. The first chill of late afternoon never drives them to shelter. They rejoice in a sudden shower. Whatever you feed them, they grow right along. Other chicks in such a flock are what might be called just good average chicks, not too anxious to leave the sheltering wings of mother Biddy, nor yet too ready to seek them, good eaters, but not so good as to rob the rest of the flock, growing steadily but never phenomenally.

A very large proportion of runt chicks are runts because their parents were not what they should be. Possibly the male bird was lacking in vigor. Perhaps the mother was worn out by heavy laying and had no vitality left to put into the germ of the chick she was compelled to be responsible for. Careful investigation has shown that where half a dozen hens of apparently the same breeding and vigor are together in a breeding pen one may lay eggs that contain strong germs and hatch into strong chicks while another will rarely lay a fertile egg, and another perhaps lays eggs containing germs so weak that they rarely survive incubation.

It would be worth while to test out the hens in every breeding pen by the simple method of hatching each hen's eggs separately and marking the chicks so that there might be no doubt as to what hen was the mother of each. This plan, while apparently a troublesome one, would prevent great loss, for it would eliminate from the breeding pen the hens whose eggs contain weak germs or no germ at all, or which produce chicks that are not worth raising. It is quite possible, too, that further investigation will prove what one investigator has announced as his own conclusion, that some hens' eggs contain mostly pullets, while others run to cockerels. Think of the saving, in time and eggs, if one could know with fair certainty when he set a clutch of eggs that most of them would hatch into strong, vigorous pullets. The day is coming when we shall be able to do this very thing.

But not every vigorous chick has a chance to develop into a vigorous, useful bird. The path of every chick, even the hardest, is beset by enemies. The first of these, and one which attacks only brooder chicks, is overheating. The first few days chicks require a great deal of heat and can get along without very much ventilation. As the days pass, however, overheating and underventilating get in their

deadly work, and the chick's vitality is hopelessly sapped before ten days have passed. Watch a hen with her brood these warm summer days. For four days she keeps them quiet and much of the time under her wings. When these four days have passed they are ready to spend the larger part of the day in a temperature of 75 degrees and up. Compare this natural condition with that of the brooder chick which is often forced to live for several weeks in a temperature of 90 degrees or more. Overheating makes the chick susceptible to the slightest chill, and you might as well kill a chick outright as keep it always either chilly or too warm.

Overheating as the chick grows older checks the growth of the feathers. The half-feathered chicks you often see are the direct result of overheating in the brooder. Not always, for the same thing is often seen in chicks that have never been near a brooder. Slow feathering in hen-brooded chicks is sometimes due to improper food and often to lack of stamina.

The "mighty" mite is another enemy that sometimes changes a healthy, normal chick into a runt. Mites in the brooder or coop night after night soon rob the chick of so much blood that it has no longer the courage to try to live, but mites occasionally, just now and then when the coop has gone too long without cleaning, stunt the chick without killing it. The same may be said of lice.

"Economical production" is the slogan, or perhaps I should say one of the slogans of the new poultry husbandry. All these little losses, the setting of infertile eggs, the death of chicks in the shell, loss of life or vitality through carelessness or ignorance after it is hatched, all together make a very great loss in the end, a loss so great that it may make the difference between success and failure. Better 20 chicks and raise them all to a vigorous maturity than hatch a hundred and have at the end only 50 strong birds to show for all your work and expense.

## KEEP OUT MITES

To prevent the introduction of chicken mites in mite-free flocks by means of new stock, the specialists suggest these precautions: New stock not known to be free of mites should be isolated the first few nights and allowed to roost on new roosts wrapped with pieces of folded paper. The object of using the paper is to furnish a convenient place for mites to hide. The paper should be examined and if mites are found the fowls should be kept on these roosts five or six days, or until no more mites come off the fowls. Removing and destroying the papers and treating the roosts thoroughly with kerosene or crude oil will prevent an infestation.

The superior profit records of small flocks, as compared with large ones, have long been recognized. Hens do better when kept in small units, and for that reason the poultryman who has decided to keep 75 to 150 hens and must build accommodations, should, if he has plenty of room and a little extra capital, build several colony poultry houses instead of one.

There are experts nowadays who, by studying skilled laborers at work, detect waste motions, eliminate them, and thereby double efficiency. The poultryman ought to study just as critically his method of mixing and distributing mashes and scratch feeds. He may be able to make short cuts which will reduce labor by five or ten per cent, or even more.

Other conditions being equal, egg production is always higher in flocks kept under the colony system, which has several incidental advantages. Disease can be checked before it has spread far. The owner develops the egg-laying capabilities of his strain easily yet efficiently by hatching eggs each season from the house which has laid the best.

We would cull carefully, and, if pullets and hens are kept, house and feed them separately.

## Spend a little time Keeping posted

Science has made a discovery of great importance to poultrymen—LEARN ABOUT IT.

It will only take a minute to address two postal cards. Two cents is not much money, but it may mean the difference between success and failure.

Invest one cent in a postal to the Dept. Agriculture, Berkeley, Cal.; ask for bulletin 162 (sent free) it is of great importance to all who keep poultry. Find out what buttermilk means to your poultry's health and your poultry success.

Invest one cent in a postal to Globe Mills, Los Angeles, for a free sample of GLOBE A-1 BUTTERMILK MASH and valuable feeding information.

GLOBE A-1 BUTTERMILK MASH costs but little more than ordinary mash. Learn why it's worth a great deal more.

You can stop Chick Funerals. Get more Eggs. Keep your flock in GLOWING HEALTH; let us tell you how.

Spend two one cent stamps today; write the government, and write the Globe Mills.

GLOBE MILLS, Los Angeles

Your dealer will supply you with Globe A-1 Buttermilk Mash.

### THOSE CALIFORNIA CHAMPIONS

California live stock people are still talking over the remarkable winning of Mr. Brush at the National Swine Show at Omaha. We doubt not Mr. Brush and Mr. Barrows are receiving many congratulations. We were glad indeed to have direct from the show an account of these winnings by Prof. Thompson and given in last week's issue. We regret that we did not give credit to Mr. Frost of the Berkshire World for use of the photos from which our engravings of the two California winners were made. Mr. Frost is a strong admirer of the Berkshire, and especially of California Berkshires and so is anxious to pass on information as to the winnings of these two magnificent animals.

### A GREAT BULL

See the announcement of Moorland Str. Cristeria, one of the greatest bulls on the Pacific Coast in the ad of Gotshall and Magruder on page 427. It costs money to secure offspring from such a bull but great producers are money makers.

Read that ad all through.

At the University Farm Seed Show recently held at Davis J. M. Romberger of Modesto was awarded first prize on a five pound sample of his Green Gold alfalfa seed. The same sample was awarded grand prize for being the best legume seed shown.

Legal Queries

Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department. Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 115 1/2 N. Broadway, Los Angeles.

Bull Trespassing

A and B are neighboring farmers. A has registered Jersey cattle; B has a Durham bull running at large in pasture. B's bull comes through the line fence and breeds three of A's cows. A, after warning B, shut the bull up. B has the keep of the bull for its use; the owner is C. Can A collect damages and, if so, must he include C in the action? Must A wait to bring suit until the cows calve, as A has no witnesses to prove that B's bull did breed his cows? What can A do if the bull again comes back?—Subscriber, Las-  
senger.

If domestic animals, such as in the above case, do injury while wrongfully in the place where the injury is done the owner or keeper is liable for injury, thus A would have right of action, especially after warning. If the action was taken merely to recover damages without attachment of the bull, although C would be a proper party defendant, he would not be a necessary party defendant and the action could go against B alone. If action was taken by attachment of the bull and to enforce a lien thereon both B and C would be necessary parties defendant. In all cases where the land upon which trespass by the animal is made is planted to growing crops, vines, fruit trees, or vegetables and is entirely and substantially enclosed the person in possession of such property is entitled to proceed to enforce the lien against the trespassing animal for the damage caused and such animal is not exempt from execution sale for any judgment which may be rendered against the owner of the animal for the trespass committed. If your premises are entirely enclosed with a good and substantial fence, you are entitled to take the procedure outlined in the estray act and retain the bull until the owner has paid the cost of its keep while in your possession, but to do this you must comply with the provisions of the act as to notice and recording, but under the estray act you are not entitled to hold the animal for the damages caused by trespass. That would be your remedy, however, if the bull came back. Of course, you are required to prove that B's bull did breed in order to recover damages, and unless you saw it yourself or can prove the act in some manner other than by production of the calves, it would apparently be the part of wisdom to wait until you have substantial proof in your possession; there would be no legal requirement, however, which would compel you to so wait.

Note—The requirement as to substantial fence in the estray act applies only to certain counties in the state of which Lassen is one.

Water Right

A and B own adjoining tracts of land. B has used for some years and is using a strip of land belonging to A in which there is a creek, for the purpose of watering his cattle. B maintains that he has a right to go on using this. What are A's rights and how can he best assert them?—Subscriber, Solvang.

Unless facts are given in a case as the above showing exactly the origin of the claimed right, it is impossible to tell whether or no a party has obtained an easement over the property of another which he is entitled to maintain or not. Many times it is simply a matter of bluff without any legal basis for the claimed right of way, or easement. But, it must be understood that where such a right is openly and notoriously claimed and acted upon continuously for the period of five years, with the knowledge and acquiescence of the owner of the land over which it is claimed, that it ripens into an estate and title. It is, therefore, of the utmost importance to have such matters judicially determined. Your method of bringing this about would be to prevent B from using the land or creek by the erection of fences or other adequate means of preventing access to the land and creek in question, or to bring action of trespass

against him which would determine the right.

Perfecting Title

A enters into a contract to buy a lot from B on a sales contract providing that when A pays the full purchase price according to his time contract B will deliver to A a deed and certificate of title. B died two years ago and the heirs have had no administrator. A now sells the lot and wishes to give a deed and certificate of title. If the heirs refuse to act or are dilatory how can B proceed to get title?—Subscriber, Huntington Park.

A is entitled to petition the superior court to have an administrator appointed; it would probably be well to set forth in the petition the above facts; then such administrator can be required after a proper showing made to the court to execute under the order of the court the required deed. The costs of such proceeding, including the fees of the administrator and of the attorney for the administrator would be borne by the estate of the deceased. The right of A in this case is that of a creditor of the deceased. As the proceedings are technical it would be necessary for you to employ an attorney to guide you through.

The pomegranate crop of Tulare County is reported somewhat short but of splendid quality. It is now being packed.

\$500,000

It is easy to be liberal when we have nothing to be liberal with, and in the handling of figures ciphers cost nothing. In the Pacific Coast items of the issue of the 13th we were rather liberal with the Pinto bean crop of Colorado and New Mexico, at least we were liberal with the ciphers attached thereto and made out that those two states would produce three billion bushels. Now when we talk in billions it means some beans, and as the United States produces only about 15,000,000 bushels we want to recall some of those Colorado and New Mexico Pintos. California is the pioneer bean state of the Union. According to the government crop estimates it will produce this year 9,280,000 bushels. Colorado, New Mexico and all other states combined, with Pintos and other varieties, will hardly reach our output.

While the production of alfalfa seed in California is not up to normal, growers are realizing better profits than usual owing to the unprecedented demand. Dealers variously estimate the amount being shipped to Middle Western points at 12 to 15 carloads, and it is claimed that a considerable quantity has been purchased for South American shipment.

Thirty thousand visitors attended the Kern County fair at Bakersfield.

THE TRACTOR OUTPUT

Upon the authority of one of the leading manufacturers of engine plows the portable output of standard tractors of all kinds and sizes for 1917 will total about 67,000. Despite the seriousness of the material situation, this output is considerably in excess of the production last year and testifies both to the necessity and demand for tractors. The significant fact about this is that the necessity is becoming more emphatic, while the supply of standard type tractors is woefully inadequate to meet the demand.

With high priced sugar, high priced honey and other sweets why not raise sorghum? Some months ago we referred to the excellent sorghum made by D. L. Wray of Tulare County. We understand he is now running his mill and producing a quantity of that excellent sweet. It is a good time to plan for next year's sweet supply by providing the field for sorghum next season.

From El Centro comes report that after the county farm bureau had secured promises of sufficient hogs to make up 30 carloads to be sent to Kansas City, San Francisco and Los Angeles buyers came in and bought up practically the entire lot at a cent and a half advance on former prices.

Raynster

Reg. U. S. Pat. Off.

Raynster is the name of the best storm-coats. To make sure that you get full value when you buy, look for the Raynster label.

You're equipped for the roughest work in the roughest weather when you have a Raynster.

These strong, durable storm-coats keep you dry through the worst of down-pours. They bring the protection of your own roof out into the fields.

And mark this: When you buy a Raynster your selection is not limited. This word represents a line of storm-coats complete in every style and type of coat.

Every man, woman, boy and girl can find just the coat they most need in the Raynster line. Work-coats, dress-coats and play-coats of all kinds and descriptions, with real service and the best of materials and workmanship, is the real meaning of Raynsters.

Go to your dealer's and select the right Raynster for your needs. Take it home. Then when it rains you're ready. Write us for interesting style book. It pictures some of the most popular Raynsters.

JIM DALE

By Ellis Parker Butler of the  
Vigilantes

Young Jimmy Dale, across our street,  
Is just a gawky lad,  
He grew so fast, the doctors said,  
His heart was mighty bad.

They wouldn't let him do much work  
Or any hearty play  
But, just the same, they drafted Jim,  
And Jim has gone away.

Jim was a sort of great, big kid  
And fooling all the while  
So, when they ordered him to camp,  
He went there with a smile.

Jim Dale is in the army now,  
Lank legs, bum heart and all,  
To fight like other drafted men  
That got the country's call.

God, yes! Jim's heart may drop him dead  
Or he may live to be  
Shot all to pieces "over there"—  
What odds to you or me?

By thunder! it's these odds to you!  
If kids like Jim can go,  
With smiles, to fight our wars for us  
We can put up the dough.

If we can buy a bond or two  
And don't, while Jim, poor cuss,  
Goes smiling off to death or wounds—  
Then hell's too good for us!

### ON TRIAL

Written for California Cultivator  
By Linda W. McNeil, San Jacinto

MARIE Benton looked around her tidy room and sighed. The idea of John Jones wanting her to marry him! She had known him all his life; they were schoolmates, but he had married years ago and now his wife was dead, leaving him with four small children, the youngest a baby of two years. And he had asked her to be a mother to his little ones.

"I don't believe I could stand it to have children tearing around and upsetting things." But she thought of John with the children clinging to him and her heart softened.

"The baby is a sweet little thing with those big brown eyes; the boy is a manly little fellow and tries to take care of her; the twin girls are bright but perpetual motion isn't in sight with them around. They'd be all over in a minute and I'd never know quiet again. Dare I try such a thing?"

She sighed. Then she looked out at her clean yard with its orderly flower beds and the yellow cat sleeping in the sun.

"They'd trample the flowers and pull the cat's tail and chase her. I'd be in hot water all the time." Again she mused: "That baby is a dear and needs a mother. They all do. John is just as bad. His coat had a rip in it and his collar was ragged. I believe I'll take the children for a while

and see how we get along before I make up my mind." Next day she said to John:

"Let me have the bunch for a month and see how we get along together. I don't know if I can stand it with them, and I want to be sure before I say 'Yes' or 'No.'"

"All right," said John, and a shade of relief crossed his face.

A month later a neighbor reported the situation:

"I've just been up to Marie's house and of all the sights you ever saw! The whole four of the Jones children are there; have been for four weeks. The boy was making some kind of a contraption with a board and hammer on the back porch, and of all the racket! The twins were playing in the kitchen. One had the chairs piled up, playing train; the other had a kitten wrapped up in that brown and yellow rug Marie sets such store by. It always made me think of a garter snake. Marie sat there in all that noise with the baby in her lap. It was pulling her hair till it was all loose and fluffy around her face and she looked happy. I never noticed before that Marie was pretty. She and John are to be married next week."

### HALLOWE'EN SPORT

Written for California Cultivator  
By Mrs. W. H. Proctor, Kingsburg

ELLIS Rollins came home from school one afternoon in October and eagerly told his mother of a plan the boys were making to have "fun" on Hallowe'en.

They were going to pile stones on Mr. Martin's porch, put a jack-o-lantern on top, knock on the door and run away.

Mrs. Rollins listened in silence, but with a picture in her mind of old Mr. Martin just recovering from a stroke of paralysis which, though slight, had left him in a weakened condition, unable to do any except the very lightest work, and of Mrs. Rollins, old and frail.

"I can tell you a better plan than that," said she. "You know you have always wanted to be a boy scout. Here's a chance to do the kind of thing the boy scouts would do."

After a little demur, Ellis agreed that the new plan would truly be more fun than the one he had told about.

Accordingly Hallowe'en night found nine boys moving very quietly about Mr. Martin's place. Their whispers and smothered laughs were not heard by Mr. and Mrs. Martin, neither was the quiet opening of porch and cellar doors. With so many nimble, willing workers, it took only a short time for the pumpkins and squashes to be transferred from garden to cellar; and then a large pile of stovewood was quickly moved from the place where it lay some distance from the house and quietly piled in the end of the back porch.

As Ellis placed the last armload upon the porch, one stick slipped and

### FOOD PLEDGE CARD

TO THE FOOD ADMINISTRATOR:

I am glad to join you in the service of food conservation for our nation and I hereby accept membership in the United States Food Administration, pledging myself to carry out the directions and advice of the Food Administrator in my home, insofar as my circumstances permit.

There are no fees or dues to be paid. The Food Administration wishes to have as members all of those actually handling food in the home.

Anyone may have the Home Card of Instruction, but only those signing pledges are entitled to Membership Window Card, which will be delivered upon receipt of the signed pledge.

Cut out this slip, sign and mail to Food Administration, Washington, D. C.

fell to the floor. The noise brought Mrs. Martin to the door. When she saw the neat pile of wood she exclaimed, "What fine scouts you boys are!"

This made the boys feel quite proud, and when Mrs. Martin filled their hands and pockets with doughnuts and apples they all agreed that they had had the very best kind of Halloween.

## GREEN TOMATO PICKLES

This calls for one gallon of green tomatoes, one-half dozen large onions, three cups of brown sugar, one-half lemon, three pods of red pepper, three cups of vinegar, one tablespoon each of whole black pepper, whole cloves, whole allspice, crushed celery seed, mustard seed and ground mustard. Slice the tomatoes and onions thin. Sprinkle over them one-half cup of salt and let stand over night in a crock or enameled vessel. Tie the pepper, cloves, allspice and celery seed in a cheesecloth bag. Slice the lemon and chop two pepper pods very fine. Drain the tomato and onion well. Add all seasoning except one pepper pod to the vinegar, then all the tomato and onion. Cook for one-half hour, stirring gently at intervals to prevent burning. Remove spice bag to prevent darkening the product. Pack in ten ounce jars and garnish with slender strips of red pepper, placing them vertically on the opposite sides of each jar. Sterilize for 15 minutes.

## CELERY PICKLES

Take pickles the size of dill pickles, cut the long way into two or three slices, one large onion in the bottom of a two-quart jar. Then fill with the pickles and four or five celery sticks, or celery seed as much as liked. Let one pint of vinegar, one pint of water, one-half cup of sugar and one-fourth cup of salt come to a boil, pour over, and seal.

## DILL PICKLES

To make dill pickles, take one cup of vinegar, one cup of salt, nine cups of water, one head of dill, and one-fourth teaspoon of alum, for a two-quart jar. Put the dill and the pickles and the alum in the jar, and let the others come to a boil. Pour over, and seal. These can also be put up in stone jars.

## OCTOBER PRIZE WINNERS

Winners in October prize contest are: Linda W. McNeil, San Jacinto, first; Mrs. W. H. Proctor, Kingsburg, second. Others whose stories are published will receive a year's extension of subscription to the California Cultivator.

## BLACKBIRD PIE

"Sing a song of sixpence,  
A pocket full of rye;  
Four-and-twenty blackbirds  
Baked in a pie.

"When the pie was opened  
The birds began to sing;  
Was not that a dainty dish  
To set before the king?"

The old nursery rhyme is suggested by a letter from G. Frank Rossaire of Tulare County. Mr. Rossaire writes: "I noticed an item in one of your late issues stating that rice growers are shooting blackbirds which are eating their rice crops. Rice growers may be interested to learn that the blackbirds are very good eating and especially fine in pies. Of course the birds are skinned, cleaned and only the breast reserved."

## A GOOD WAY OUT OF IT

At a certain Northern military depot an obvious malingerer attended the regimental doctor for examination. His tale of woe was, however, laid on too thick—what with a weak heart, corns, lumbago, etc.

The shrewd doctor patting him on the shoulder, said to him:

"My poor fellow, go to France and get shot out of your misery."

## FANCY!

"They say that the plates on a battleship are nearly a foot thick."

"Mercy! Fancy having to wash them three times a day!" — Girls' World.

"The Range  
with a  
Reputation"

## Equipped to do her bit!

With a Majestic in your kitchen, you can do more to help the nation save food and prevent waste. Its heat-tight, cold-riveted construction saves fuel. Its perfect baking results saves food. Its unbreakable malleable iron and rust-resisting charcoal iron body saves repairs and outlasts three ordinary ranges. Years after this war is over, your Majestic will still be proving that.

Do you know that now much less crops will buy a Majestic than a few years ago? Less than 2 acres of corn pays for it—think how little seed and labor you give for an article that means so much to the whole family. One quality, many styles and sizes. There is a Majestic dealer in every county of 42 States. Send for free booklet and name of dealer near you.

THE ORIGINAL CHEMICAL  
Indoor Closet

30,000 SOLD—FIFTH YEAR  
More Comfortable,  
Healthful, Convenient

Eliminates the out-house,  
open vault and cess pool,  
which are breeding places  
for germs. Have a warm,  
sanitary, odorless toilet right  
in your house. No going out  
in cold weather. A boon to  
invalids. Endorsed by State  
Boards of Health.

## ABSOLUTELY ODORLESS

Put It Anywhere In The House  
The germs are killed by a chemical process in  
water in the container. Empty once a month.  
No more trouble to empty than ashes. Closet ab-  
solutely guaranteed. Guarantee on file in the  
office of this publication. Ask for catalog and price

Prices delivered in East 1 1/2c higher.

### RICE

Wholesale quotations:  
Cal. ....7.50  
Broken .....5.60@6.00

### BEANS

Wholesale Prices:  
The entire bean market is weak and  
uncertain at this writing. The food com-  
mission is urging buying only to fill im-  
mediate needs. A subscriber asks as to  
Teparies and why these do not sell. In  
the Los Angeles market conditions with  
Teparies are fully as satisfactory as with  
any other variety of beans and present  
quotations are \$9.00. The Tepary is be-  
ing well received and if the local market  
is not satisfactory growers should get in  
touch with the larger centers. It is rumo-  
red that the food commission may take  
a hand in fixing prices on beans.

Lady Washington .....14.50  
Limas .....14.00  
Pinks .....11.50  
Manchurian Reds .....11.00  
Baby Mex. ....9.00  
Garbanzos .....9.00@10.00

### HAY

Quotations by Nichols-Loomis Com-  
pany. Wholesale prices to growers f.o.b.  
L. A. carlots.  
Tame Oat .....22.00@24.00  
Volunteer Oat .....17.00@19.00  
Wheat .....18.00@21.00  
Barley .....19.00@22.00  
Alfalfa .....20.00@23.00

The Alfalfa Growers' Association of  
Southern California writes:  
"At a meeting of the executive com-  
mittee October 15, it was decided that  
market conditions justify association  
members asking \$24 f. o. b. per ton where  
the \$1.50 freight rate applies, and \$23 f.  
o. b. per ton where the \$2.50 freight rate  
applies. Demand exceeds supply. We  
are having a number of calls for hay."

Do you own an orchard? Or are you going to plant one?

If so, you will find information worth many dollars to you in the Giant TREE BOOK, "Better Orchard Tillage."

This book is written especially for Pacific Coast fruit growers. It tells how to have thriftier, faster-growing, earlier-bearing trees by planting in beds blasted with

## GIANT FARM POWDERS

STUMPING — AGRICULTURAL

It tells also how to secure better drainage and increased moisture-storage capacity in established orchards, and how to get larger yields and save money on fertilizers.

The book contains illustrations that show exactly how to do the work. There are chapters on preparing the beds for trees and increasing the plant food by deep tillage. Also there are directions for blasting in established orchards or groves, and interesting letters from many prominent fruit growers.

### Mail the Coupon

Mark and mail the coupon—or a post card—and this valuable book will be sent free. Do it now—before you forget it. Other illustrated books on Stump Blasting, Boulder Blasting, Subsoil Blasting and Ditching, will also be sent on request.

The Same Power from a Gallon of Kerosene as from a Gallon of Gasoline

The 3 and 6 H. P. are Real

The 1½ H. P. Gasoline Only

THERE are engines that cost more money—but you can't buy a better farm engine at ANY price than the Fairbanks-Morse Type "Z," or one that operates more economically.

Next to its low operating expense—extreme simplicity is the secret of its popularity. No makeshift attachments—nothing added for ornamentation or just for "talking points"—an engine that will deliver the engine performance you want.

Think of buying this combination in one engine: Simple—light weight—substantial, fool-proof construction—gun barrel cylinder bore—leak-proof compression—complete with Built-in Magneto—and then, the feature of quick starting even in cold weather.

When you see this combination on your dealer's floor, you—like thousands of other farmers—will not be satisfied with any other engine for all-round farm engine work.

THE SERVICE YOU GET FROM YOUR LOCAL DEALER

Buy your "Z" from your local dealer, because he has it in stock and can make prompt delivery. His assurance added to ours gives you double protection that you will get the engine service you want.

# Boys and Girls Send in Your Names!

## WE GIVE AWAY SHETLAND PONIES

This is the Easiest and Best way to get one. Any Reader may send in the name of any boy or girl.

The Best  
Pet and  
Playmate  
any Child  
Can  
Have

Wouldn't you like to have a fine pony like this?

Just the  
Christmas  
Prize  
Every  
Boy and  
Girl  
Wants

## How to Get a Shetland Pony

The California Cultivator, the big agricultural and live stock weekly of California, is going to give away some more Shetland ponies, and you might just as well have one as anybody. Send in your name and address today so we can tell you all about it. It costs no money to enter or take part. Already the Pony Man has given away 157 Shetland ponies to boys and girls for doing a little work that you or any boy or girl can easily do during spare time. Many other boys and girls say it is easy, and I believe you will say it is too.

These Shetlands we give away are fine, valuable little horses, all trained for children to ride and drive. Read the letters we are printing and see what the other boys and girls say who have won our prize ponies.

A Shetland pony is the nicest pet and playmate any child can have. They are fine to ride and drive to school for they are perfectly safe and by nature are great pets and very strong, useful animals, too. Many boys and girls who have to walk to school have sent to California Cultivator for a Shetland pony.

The Pony Man had never heard of any of these other boys or girls until they sent him their names and addresses so he could write and tell them how to go ahead.

Three more Shetland ponies will be given away Saturday, December 22, 1917, just in time for Christmas presents, to boys and girls who do some work that will be easy to do. Wouldn't you like to have a fine Shetland pony for a Christmas present? Why not work for one of these?

Each Pony is Gentle and Broken to Ride and Drive

### WAS OFFERED \$200 FOR HIS PONY AND OUTFIT

Here is a letter from Earl Frederick, who won first prize pony and outfit about a year ago. He was offered \$200 for his prize, but would not sell it. "Dick and his pretty outfit are just as nice as Earl's pony and outfit. Here is Earl's letter:

"Dear Pony Man: I received 'Bingo' and the buggy and harness which I was fortunate enough to win, and I am well pleased, as it is a better outfit than I really expected. I have been offered \$200 for it, but of course it is not for sale. I want to thank you for it and advise any boy who wants a Shetland pony to enter and work and earn one, for it is sure a pleasure to ride or drive a pony like the one I got. I will have my picture taken with the outfit and send you one. Again thanking you, I remain, your friend,

EARL FREDERICK."

### A PRIZE FOR EVERY BOY AND GIRL

And here is another important point. If you send us your name and address at once you will be entitled to take part in the Extra Prize Awards and you can sure earn a fine camera and gold watch or other valuable prize. You cannot lose, everyone taking part will receive a prize or cash for the work done.

"Dick," a beautiful young Shetland and pretty outfit consisting of a fine four-wheeled pony runabout and nickel mounted leather pony harness is the first prize, and that is the one you want and you might just as well have "Dick" as anybody. Send us your name and address right away so you can get started at once and get a pony for yourself. Besides "Dick" we are going to give away two other fine Shetlands, "Fleet" and "Jerry," and a pretty saddle outfit with each one. As soon as we hear from you we will send you pictures of other boys and girls and the ponies they got and tell you how to go ahead. If you already have a pony and know some other boy and girl who would like to have one, please tell them about these ponies we are going to give away.

### DELIGHTED WITH THEIR PONIES

I have already given away 157 Shetland ponies and pony rigs to boys and girls and if you haven't a pony now is your time to get one. You will be just as well pleased as the others. I have not the space here to print all the nice letters the boys and girls have written me, but I will send many more when I hear from you. Some have been offered \$200 for their ponies and outfits, and would not accept it, so you see these are valuable prizes we give away.

Pony Man, California Cultivator.

I take pleasure this morning in writing you a few lines for Percy, thanking you for the nice prizes he received. He certainly was delighted with them. If the other contestants were as pleased as Percy they certainly were a happy lot on Christmas morning.

Yours truly,

MRS. W. F. FOWLER.

Rialto, Cal., December 27, 1916.

These Ponies Are Fine to Ride to School

### TAUGHT HIS PONY TRICKS

"I am sending you a picture of myself and 'Colonel' and his outfit. I was sure glad to get him, for I think him peaches and cream. He drives fine and I ride him also. He will lie down, shake hands, jump over a stick, stand on his hind legs, and try to do most anything I tell him. He seems to understand what I say. Again thanking you for 'Colonel' and the outfit, also those who took the paper, I remain,

"ELMER LINDSTY."

### WINNERS OF OTHER PONIES RECENTLY GIVEN AWAY

Beulah DeWitt, Ventura County.  
Raymond Moyer, Riverside County.  
Margaret Roe, San Bernardino County.  
Marguerite Rini, Sacramento County.  
Gertrude Fawcett, San Joaquin County.

### WINNERS OF PONIES GIVEN AWAY MARCH 24, 1917

Earl McAllister, Kern County.  
Torance G. Spike, Jr., Fresno County.  
Verna Cole, Ventura County.  
Wm. L. Armstrong, Napa County.  
Conle M. Slikker, Kings County.  
George Armsby, San Mateo County.

Marina, Cal., January 14, 1917.

Dear Pony Man:

I am very much pleased with my watch. It keeps accurate time. I have only had to set the hands once. I feel very well rewarded with it for the little work I did for you. I feel as though I have not done enough for you. I would like to enter any other campaign that you have, so please let me know about it.

Very truly,  
THOMAS SAMUELS.

Sacramento, Cal., February 12, 1917.

California Cultivator, Los Angeles.

Dear Sirs—I wish to thank you very much for the way in which you conducted the recent campaign in which I took part. Your paper is very well known throughout the country which makes soliciting much easier and encourages one to work harder. The system you have in keeping the contestants informed as to their standing could not be improved upon.

I worked as hard as I knew how and although I was not fortunate enough to carry off the first prize I am very well satisfied with the second, which at present I would hate very much to part with.

The pony is just great. I am growing more fond of her every day and she is as gentle as a kitten. So far I have been riding her but as she either drives or rides I intend to get a small cart so that I may give some of my interested friends a ride.

Again thanking you for your kind treatment during the contest and dandy pony and saddle I received, I remain

Yours very truly,

JACK HENDERSON.

## Bee Culture in California

Ralph de Ong Writes Especially for Cultivator Readers of Opportunities and Some of the Requisites of Successful Bee Culture in This State. The World Needs Sweets as Never Before. Beemen Will Do Their Share

**T**HE high price of honey has made bee keeping a very profitable business. Two years ago extracted honey was selling for from three to five cents a pound. Today it brings from 12 to 13 cents a pound wholesale and beeswax shows almost as great an advance. This has led many people to consider this industry as a possible means of livelihood. Beekeeping may be taken up as a side line or as a profession. For the man or woman with small capital and a desire for outdoor work it offers very fine opportunities, for there are few communities in which a thriving stand of bees will not gather at least a small surplus of honey. The work is not heavy except in large apiaries and the bees may be kept almost any place where they will not interfere with other people; an unused corner of the ranch, a backyard or even a house top will answer the purpose. Many a man started with a few colonies and has become violently interested and finally devotes all or a large part of his time to the work. In California the trend is decidedly towards the professional rather than a small number of colonies scattered among a number of owners. All people are not beekeepers, and unless one finds that there is an inborn love for the work and the ability and patience to give time to every detail, the work will be like any other—a failure. Start with a few colonies and if the work prospers and time and opportunity offers expand the holdings.

There are many good opportunities for profitable beekeeping in the state and especially in the alfalfa regions of our great valleys and on the slopes of many of our low ranges of hills. It is seldom that a crop can be grown one for the nectar it will yield. Nectar is the raw product gathered from the flower by the bee and from which honey is made, the usual practice among beekeepers being to rent a quarter or a half acre from a landowner where good bee pasture is available. This should be at a little distance from the house and barn to minimize the danger of annoyance to man or stock. Often this site may be gotten free or at least by the gift of some honey. Sometimes five or ten dollars is the price of a good location for a year and one of these apiaries may have from 100 to 300 or 400 hives "stands" of bees.

### Apiary Site

The most important point in beekeeping (aside from the beekeeper himself) is the choice of a location with reference first of all to the amount of bee pasture present, and secondarily, nearness of market. There are other important features such as the race of bees, the style of the finished product, type of hive, close neighbors and so on. But the thing to always keep in mind is that we propose to convert a raw material, i. e. nectar, into a finished product—honey. In doing so we are converting

a substance which would be utterly lost into one of the most delectable and useful foods known to man. To do this we must be in a region where there is an abundance of nectar produced over a period of at least two weeks time and preferably two months or more. This need not all come at once but there may be two or three good flows of nectar through the year and a light flow through the remainder of the summer. During these periods the bees store more honey than is needed for their own consumption. This is known as a "surplus." Only when sufficient honey is produc-

The able-bodied man who refuses to work these days is not only personally contemptible but he is a public menace and should be treated as such. To one who has watched the long lines of khaki-clad men winding through the streets to the railroad stations en route to the front; to one who has seen men congregate at the railroad stations with their little paper bundles in their hands containing all they are taking with them from the world they knew as they go into another life, that of the training camp, there is little excuse for soft treatment of the loafers who drift around the country too lazy to work themselves and too malignant to see others work.—Sugar Magazine.

ed to satisfy their own needs and those of the brood that is being reared will there be any honey produced for the beekeeper. If you encroach on the amount of honey needed for their own use during the winter or a dry summer the colony must be fed or starve.

Since the supply of nectar is the issue upon which it is possible to make the business profitable or otherwise, it becomes necessary for the beekeeper first of all to learn the nectar producing plants of his vicinity, their relative abundance and the nearness of other beekeepers. A strong apiary will usually occupy at least one mile of the territory on each side of the apiary and sometimes two miles, and unless the site is extremely favorable it is not well to crowd in any closer to other apiaries. Study the flowers upon which the bees are working. Note the length of time they are producing; watch the pollen producing plants, especially the early ones, such as willow, cottonwood and acacials, for pollen is necessary to stimulate the rearing of the brood, i. e. young bees. Consult with local beekeepers and supply houses. These people are nearly always willing to assist beginners and their advice will be very valuable. The included list of the principal honey plants of different regions will give an idea as to the more common ones found in the state. This is very brief and many have been omitted which are of value in limited areas.

### Migratory Beekeeping

Where the nectar flow is of short duration or irregular on account of rainfall it is sometimes possible to move the entire apiary from ten to a thousand miles, once or even two or three times through the season. This is called migratory beekeeping. This practice however should be left to experienced beekeepers. To give an example—in Southern California the season may open with sage in April, at the close of the blooming season, the apiary may be moved to the bean fields and then possibly to later

blooming natural pastures as in Nevada. Migratory beekeeping is especially valuable in regions dependent on rainfall, in dry seasons the apiary can be moved to more productive sites and by securing a good location, the year's run may be changed from one of a heavy loss to a profitable season. Such tracts as the foothill regions of the Coast and Sierra and the Antelope Valley are especially liable to a shortage of nectar from insufficient rainfall. The usual practice on temporary sites is to extract all honey at the end of the season's flow and market it before moving, thus effecting a

saving in freight and the loss caused by moving honey in the hive.

### Honey Plants of Interior California

Alfalfa is the most dependable honey plant in California although in the Coast regions it is not considered as good a yielder as in the interior valleys. The Imperial Valley and San Joaquin have for years been heavy yielders of a fine quality of honey. Good pasturage is to be found in many places in Sacramento Valley and in many of the smaller valleys through the mountains as far north as Modoc County. It is true that alfalfa is often cut before coming to bloom but there is always more or less on ditch banks and the roadside. When pastured or grown for seed nectar is produced in great abundance.

Supplementing alfalfa in the great valleys is wild mustard, especially black and English mustard. Wild radish is also of some value. Alfalfa and burr clover are both common plants beginning to bloom in February and lasting into June. This carries the season through the first crop of alfalfa, which is usually a light yielder, the second, third and fourth crops being the heaviest yielders. In many regions in the interior there is just about enough honey to carry on brood rearing and build up the colonies through the spring months. By the last of June honey is coming in freely and continues until September or the middle of October.

Almonds and peaches yield a very early nectar but as it is bitter in flavor it should never be mixed with any marketable honey but be used solely for brood rearing. Horehound is a common plant of waste places, blooming in May and June, a heavy yielder of dark, rather strongly flavored honey. This plant is a perennial, very common in pastures, fence rows and waste places.

Lippia (nodiflora), commonly called carpet grass or mat grass, is becoming a prominent honey plant along rivers and in low, overflowed land. It is a low creeping plant, covering the

ground with a dense mass of foliage, smothering out other weeds and grasses and gradually taking entire possession of the ground. When desired it can be destroyed by cultivation. It is being used along the river fronts to protect levees against erosion and is spreading slowly over much of the overflow country in these counties. Another species of lippia, but of less value as a honey plant, *Lippia lanceolata* is occasionally found in the muddy lowlands. It is a more erect grower, sometimes ten to 14 inches tall and lacking the dense mass that *nodiflora* has. *Lippia* blooms from May until October, yielding a large amount of honey of good quality. It favors moist soil but may be found growing on dry roadsides throughout the summer. Starts readily from cuttings except during cold weather.

Sweet clover, especially the white variety (*Mellilotus alba*), is abundant through the lowlands of the Sacramento and San Joaquin Valleys. This plant is especially valuable to sow in waste places as a forage plant for bees, the yellow variety (*Mellilotus indica*) is not considered as good a honey plant. The seed of the white variety may be gotten off the market and started with little or no care. The honey yield is abundant and of good quality.

Peppermint, tarweed and star thistle often yield a good surplus in Sacramento, Yolo and Solano Counties during the months of August to October. Blue Curl, alsike and spike weed are considered valuable in the lower San Joaquin valley.

### Coast Honey Plants

Eucalypti are the heaviest yielders of honey during the winter and spring months from the Bay region south, nearly all species of the eucalyptus being heavy yielders but on account of their wider distribution the blue and red gum are the most important ones commercially.

Mustard, alfalfa, and bur clover begin blooming in the winter or very early spring, so that the heaviest yield of honey is often gathered by the end of May. Acacia and willow provide an abundance of pollen for brood rearing during the early spring, from the Bay region south. Following the early spring bloom comes a large group of hardy shrubs, the sages being the most important from Alameda of all the species. Manzanita is an early bloomer, followed by oak, locust, buckeye, poison oak, and Christmas berry. Horehound, tarweed, blue curl and wild buckwheat are the summer and fall plants. In some regions orchard fruits and beans are important.

Native vegetation in the vicinity of Lancaster and eastward into Inyo County yields a good quality of nectar in favorable seasons but in dry years the beekeepers may have to resort to feeding to save their colonies.

## Decrease your fire hazard!

The one big risk on the farm is danger from fire. You can cut a big slice off this risk by using California Redwood.

Redwood is made *fire resistant* by Nature—the inflammable pitch is left out. It is hard to set Redwood on fire; it burns very slowly and is easily put out.

## California Redwood

### Resists fire and rot

Using Redwood is real safety-first protection. Protection from fire and also from rot, for Redwood contains a *natural* preservative which permeates every fibre of the wood and insures unusually long life.

**FREE.** Write for free copies of "The Test by Fire" and "California Redwood on the Farm"—valuable information every farmer should have. Please give us the name of your local lumber dealers.

### CALIFORNIA REDWOOD ASSOCIATION

770 Call Building San Francisco, Calif.

Ask for the child's story of the "big tree" of California; there's a copy for every child in the nation.

## Alfalfa Seed

When you think of Alfalfa Seed you say: "Well, I won't need any until spring; so I will wait until then and buy." Not so fast, Mr. Rancher; maybe you will and maybe you will not.

Times have changed. Seeds, like other staples, have advanced. And this very advance and demand means with a small crop in 1917, that things will buzz later on. Note the big advances on Alfalfa Seed the past month; what will it be later on?

We handle this seed in great quantity, both retail and wholesale. Years of experience have made us the Alfalfa kings of the west. We know what you need, if you will tell us what your soil is. California grown seeds are our hobby, as well as our business, while,

ALFALFA SEED IS OUR SPECIALTY

## Keep Poultry in the Orange Grove

**SUBSCRIBER** at Adelaide, South Australia, L. McIntosh, sends to the Cultivator an interesting article published in the Murray Pioneer, an irrigation publication. It tells of the benefits to the orange trees and to the owner of keeping a flock of chickens in the orchard. The article is written by A. S. Henderson:

One thing all citrus growers must recognize is that when trees attain the bearing age they require feeding, or, rather, we must return to the soil (our capital) the plant foods which the crops take out. At the same time it is best to be careful in our fertilizing, especially in citrus culture, as an overfeeding generally results in large coarse skinned fruit, the kind of fruit the trade does not like, as retailers have to charge so much more per orange for it. This applies more to oranges other than navels. It is much better to get a good crop of No. 3 or No. 4 than a smaller crop of No. 1.

In Mildura I had three-quarters of an acre of Late Valencia, Mediterranean Sweets and Jaffas, and finding I could not get as much organic manure in the shape of stable manure as I wanted, I thought I would wire net the plot in and start fowl breeding. I put six foot netting round the three-quarters of an acre, and then consulted the best breeders of fowls in Victoria as to the most profitable breeds, which resulted in my beginning my breeding with a pen each of White Leghorns, White Orpingtons, White Plymouth Rocks and White Runner Ducks, and after five years of breeding I unhesitatingly say that White Leghorn and Runner Ducks are the best proposition in every way.

I netted off part of the trees in breeding pens, laid water on to a whole lot, so as to have cool clean water in every pen, and by so doing reduced the labor to a minimum, even with three incubators going the season, I still worked my acres of vineyard.

For six years these trees had manure except from about 200 fowls I did not have scale on the trees, a fowls did most of the cultivating, and in the last year I was in Mildura 1914, I made £85 net from the oranges on a low market, and £3 per week from the eggs and chickens during the season.

I cannot advise growers too strongly to try running fowls in their citrus orchard. The land will be practically giving you a double crop, and fowls will help materially in fertilizing the trees and keeping insect down. Whatever breed you determine on keeping, get the best procurable as they are most profitable, and pride to their owner.

### EATS CITRUS SCALE

An insect resembling the Australian ladybird has been discovered in the orange groves of the Porterville district by A. A. Jenkins.

Specimens of the insect have been identified by J. Eliot Coit, professor of citriculture at the University of California, as the "twice-stabbed ladybird." The insect is said to be voracious and to feed on a variety of scale found on citrus trees. Professor Coit urges its propagation, saying it will greatly aid in eliminating the scale pests that infest citrus groves. Martha L. Baker.

## What Causes Citrus Dieback?

**DIEBACK**, or exanthema, is a disease of citrus trees that is characterized by the production of gum in different tissues of the developing parts. It is a disease of the growing tissues of the citrus tree. Its five primary symptoms are the gum pockets, the stained terminal branches, the marked or ammoniated fruits, the bark excrescences, and the multiple buds. The mere dying of the limbs backward is not dieback. The disease can be identified only in the presence of one or more of its primary symptoms.

The secondary symptoms of dieback are an exceptionally deep green color of the foliage, a distorted S-shaped growth of the immature angular terminal branches, frenching of the foliage, and thick, coarse and somewhat peach-leaf shaped leaves.

The absolute cause of dieback is not known. It is thought to be in some way connected with organic matter which has been added to the soil, or which is residual therein. The soil conditions known to be favorable for the development of dieback in citrus trees are the presence of excessive quantities of organic ammoniates, a lack of drainage, hardpans too near the soil surface, excessive cultivation, and irregular moisture conditions.

The disease is more prevalent in trees planted in certain locations, such as near stables, outhouses and cesspools; on slopes, and "sand-soaked" areas; and on spruce pine, shell, quina and rocky lands.

The disease is controlled by certain preventive and curative methods. The preventive methods consist in correcting the soil conditions that are favorable for the development of the disease. The curative methods consist in the use of bluestone—copper sulphate—on the soil and beneath the bark of the trees; and for spraying the trees with bordeaux mixture. Bulletin 140, Florida Experiment Station.

### PLENTY OF NITRATE

I should like to draw your attention to an error made by G. W. Waterbury in your issue of October 6 in an article entitled "Concerning Fertilizers," page 348. In this article it is stated that the Chilean saltpetre will be available for some 20 to 25 years yet, whereas there is in reality a supply of nitrate of soda in Chile sufficient to last 300 years from now. This estimate is given in the Journal of the Society of Chemical Industries, Volume 36, No. 2, page 52 (January 1916).—W. Lambert Myers.

## The Food Situation in France

By Fred B. Pitney

Completing the series of articles on the food situation in France, Mr. Pitney tells of the great need in France for meat supply.

**THE** French government is very bureaucratic, but the French people do not like to be overgoverned. They object seriously to anything that savors to them of meddling in a man's private affairs. For this reason it has been extremely difficult to get a workable income tax law in France. The people immediately rose against the proposal to give the government the right to examine their books and find out if they told the truth about their incomes, or find out what their incomes were if they failed to make a return. So a scheme was figured out for taxing a man on seven times his rent if he made no income tax return or one the government thought too low.

Saying how much or what a man shall eat is, also, getting pretty close to private affairs, and therefore, the French government, knowing immediately the people it has to deal with is slow in coming to such measures even in face of the only too evident food shortage in the country. They have been efforts at price fixing, but they have not worked satisfactorily, one reason being that they have not been national but local. Paris, for example, has tried fixing the price of butter, but it has been found that the result has been to drive butter away from Paris to localities where it could be sold for what the market would pay.

National Price Fixing to be Tried

A scheme of national price fixing to be tried now with beans and potatoes. Both of these crops are far below the requirements of the country.

ve seen many days when potatoes did not be bought in Paris, and it is a common thing last winter to see to run half over the city to find market where green vegetables could be bought. The national price scheme for beans and potatoes divide the country into districts, fix the price for each district, and a penalty for sending either commodity out of the district without permission.

o far meat has withstood all efforts to control its consumption—there has been no attempt to control price—and yet it is vitally necessary either to control the consumption of meat in France or to increase the supply. Otherwise the end of the war will see the country so reduced in its food that it will take many years to get them back again to the point where France will be once more self-sufficient.

#### Supply Must be Increased

Of course the thing to do is to increase the supply. When a country has its bread stuffs cut down to the extent to which France has suffered, the people naturally fall back on what they can get. One might think they would turn back on vegetables, but the same conditions that have deprived them of meat have deprived them of vegetables. There have not been the hands to cultivate the ground. They could not raise vegetables than wheat, but they have fallen back on beef, mutton and pork. The herds existed, but they have been eaten up. The people had to have something to eat. To what extent the herds have disappeared is shown by the cutting down of the meat ration of the soldiers at the front. At the beginning of the war they were allowed one pound of meat a day. Twenty per cent has been cut from that allowance. I will point out again that only the necessity will countenance reduction of the food allowance of soldiers at the front.

#### Meat Shortage Serious

For civilians, naturally, were the first to suffer when meat became scarce. The price went soaring. Retail prices for consumers doubled and trebled. The poor cut down in quantity, one understands, and the very poor went without entirely. But those who could pay could have meat if they were willing to give the price.

When the time came, however, when there had to be an attempt to control consumption. The army requires 400 tons of meat a month, or 432,000 tons a year. France's herds suffered enormously at the very beginning of the war. A total of approximately 2,500,000 cattle, sheep and pigs from the French herds were seized by Germany in the invaded provinces. Coming immediately on top of the loss France found herself compelled to find food for some millions of German and French refugees. This had to be done at once and the herds slaughtering had to be slaughtered without stopping to ask questions about the future. One does not say to a

starving man, "What will I do tomorrow if I give you this crust of bread today?"

England, therefore, undertook to supply France with 250,000 tons of meat a year, and this supply was kept up at the rate of 20,000 tons a month until February of this year. At that time the English supply stopped. England was having then all she could do to feed her own people on reduced rations.

Thus since February France has had to supply from her own resources 432,000 tons of meat a year to her armies; 1,428,000 tons for the civilian population and another 350,000 tons for refugees, making a total of 2,000,000 tons of meat a year demanded by France.

#### Herds Depleted

What are the herds she has to do this with? At the beginning of 1914 her cattle herds comprised 14,787,710 head; sheep, 16,131,390 and hogs, 7,035,850. By the end of 1914, after five months of war, her cattle were reduced to 12,668,243, her sheep to 14,038,361 and hogs to 5,925,291. Today her cattle herds are cut down more than 20 per cent while her sheep number no more than 10,000,000 and her hogs 4,000,000, a loss of nearly 50 per cent of her hogs and three-eighths of her sheep on top of the loss of 20 per cent of her cattle.

Cattle feed is short in France and the cattle are poor and under weight. More of them have to be killed in proportion to supply the needed quantity of meat. Milk cows have been killed and the shortage of proper feed has reduced both the quantity and quality of milk. I have seen the time when it has been next to impossible to get milk for my little baby in Paris. I have gone from store to store, begging some one to sell me as little as two cents worth of milk for my baby.

#### Crying Need for Meat

The government is trying to conserve the meat supply and save the herds now, by limiting the use of meat to one meal a day. The endeavor is made to accomplish this purpose by forbidding the sale of meat after 1 p. m. and ordering the butcher shops closed at that hour, while hotels and restaurants can serve meat only with the noonday meal. But this measure has had little effect on the use of meat as it serves only against the restaurants. Housekeepers can buy all the meat they want before 1 o'clock, and they do it, as there is no restriction in the amount that can be bought. Moreover, in the restaurants one can eat all the meat one wants at midday and thus make up for having none at night, and this, also, is the practice.

There is only one real solution of the problem. France must have more meat. Her herds are disappearing rapidly. They are today far below the danger point. Soon they will have to be reconstituted entirely. Meat, meat and again meat is a pressing need for France.

## Questions and Answers

ANSWERS BY EDITOR AND STAFF

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper, sign full name and address. Unedited communications receive no attention.

#### Along Street

owns row of walnut trees which planted on his land near boundary line running parallel with country road. The branches extend over the road and across part of roadway. To remove the nuts on these branches, those which drop into the road, belong to—Subscriber, Winters.

the government surveys 640 acres, or a section one mile square, and divides up each parcel. In laying out city or state roads the lands are partitioned an equal distance either from the division line, but they are patented or deeded to the settler, so practically all lines go to the center of the street. Even in the subdivision of Mexican grants this custom has obtained, hence the property owner owns to the center of the street. Such trees as he may plant inside the nine foot curb line are his to

care for and all the fruit or nuts which may grow on those trees are the property of the land owner, and of course it goes without saying that trees growing inside of the line or branches hanging over the street are under the control of the same common law. However, if the branches from one's fruit trees overhang a neighbor's line fence such fruit becomes the property of the land over which it hangs. In case of the street, if passersby or others trespass and take the fruit or nuts the procedure would be to appeal to the township officer, or one may swear out warrant for the arrest of trespassers.

#### Some Beans

I have been informed that Blackeye beans will grow pods two feet long, containing 40 to 50 beans to the pod. If one should plant this variety at the proper season would there be any assurance of getting such results?—Subscriber.

We do not believe we would plant the beans with the expectation of getting two-foot pods. However, Black-

The advertisers in the California Cultivator are known to be reliable and we recommend them to our many subscribers.

eyes have proved very productive in many sections of California. Beans grown in our garden this year had pods 12 inches or even longer, but even with the aid of fertilizer we did not succeed in getting pods two feet long. The state university reports for this state a good yield to be 1200 pounds, the usual yield being about 800 pounds per acre.

### Wood Cuttings for Fertilizer

Living near the river where there is a quantity of willow and alder brush, as well as drift wood, would like to ask if there is some method of cutting this up for scattering over the orchard. Would it make good fertilizer and where would one procure machine for cutting?—Subscriber, Lemon Cove.

The prunings from orchards, especially smaller tips, have been cut in this way and left on the soil, and it has been thought a degree of benefit was secured, but this has usually been considered insufficient to cover cost of handling such coarse fertilizer. The driftwood and larger material, in consideration of the length of time required to decay, would be in the same class with sawdust and shavings, regarding which there has been question as to advisability of their use on land.

### Blight of Beans

A subscriber writes: “I send bean pods which were gathered from healthy looking vines with plenty of fresh, well filled pods on them. The blossoms were still coming on these vines when these shrivelled pods were picked. What is the cause of their not filling?”—Subscriber.

D. F. Reichard answers: “Probably blight or a blast of hot weather came at blooming time.”

### Gum Disease

I have some early plum trees, set out three years ago, which bore well in the spring. Now gum is coming out all around the body of the tree. What would cause this and is there a cure for it?—Subscriber, National City.

The gum exuding from the tree may be caused by the physical condition of the soil, by the souring of the sap or by some other unhealthy condition of the tree. There is being conducted at the present time a series of investigations by experts of the state university along this line. Regarding these a report will be made later. Assuming that the trouble is caused by the poor physical condition of the tree pruning and cutting away the affected parts so far as possible is about the only remedy.

### Nematodes and Fusarium

I send roots of muskmelon, tomato and squash. What is the cause of large knots on the roots and the dying of the squash roots?—Subscriber, El Cajon.

These roots were forwarded to the pathological laboratory of the citrus experiment station at Riverside. Prof. C. O. Smith answers: “I find that the muskmelon and tomato are affected with nematode galls. The specimen of squash seems to be affected with a fungus in the smaller roots. I have not made cultures of this but think it is probably caused by a species of fusarium. There is no very satisfactory control for either of these troubles. In the case of the nematode gall I would suggest planting of some crop not affected by this trouble.” In a list of plants susceptible to root knot, which Prof. Smith sends with the above, is given a number of plants which are least susceptible to nematodes and which may be planted in rotation in order to starve out this pest. The least susceptible: Oats, rutabaga, mustard, turnip, sunflower, parsnip and field peas.

Nematode abundant but injury apparently not great: Onions, asparagus, cabbage, kale, chrysanthemum, strawberries, Jerusalem artichoke, sweet potato, alfalfa, garden peas, radish. Such plants as celery, beets, watermelons, muskmelons, cucumbers, squash, pumpkins, carrots, soy beans, lettuce, sweet peas, lentils, tomatoes, egg plant, potatoes, etc., are seriously affected.

# SPRAY TO SAVE

Sulphur in solution with lime serves both as an insecticide and fungicide for use during the dormant season.

The amount of sulphur in actual solution indicates the quality and effectiveness of this spray.

**ORCHARD BRAND** Lime Sulphur Solution has the highest efficiency; it is guaranteed to contain more than 25 per cent of sulphur in solution. It is a uniform clear liquid entirely free from sediment—this means no waste of material and no delays from the clogging of the sprayer nozzle.

For spraying peach, almond and other stone fruits for the prevention of coryneum or California Peach Blight use **ORCHARD BRAND BORDEAUX MIXTURE** the properly balanced fungicide.

As a dormant spray for the control of scale insects and for general winter cleanup purposes, use **UNIVERSAL BRAND CRUDE OIL EMULSION**.

Quick shipments and prompt deliveries at all times.

Naturally it is to your advantage to purchase materials so largely dependent upon integrity and reliability, from the largest manufacturers of chemicals in America.

Just as fruit growing is an important business in the West, so is the Insecticide Department of the Company. A full line of material suitable for the needs of growers, throughout the year, always ready for immediate shipment. Not less important is the degree of intelligence applied to the subject of insecticides, always at your command.

## PEARS IN THE SACRAMENTO VALLEY

Written for California Cultivator  
By J. W. Mills

N the area planted to deciduous fruit trees in the Sacramento Valley and the Bay region, pears stand fifth.

There are about 16,000 acres all told, constituting about six-sevenths of the total area of pears in the state.

Pears are the most remunerative of the deciduous fruits when properly handled, but the numerous pests and diseases which prey upon this variety of fruit, together with the late bearing tendency, cause many to hesitate in planting it.

### Favorite Areas

The rim lands of the lower river areas are the most popular for planting and it is there that the most productive orchards are found. The trees grow to large size, often bearing 1000 pounds or more per tree. Larger tracts are planted to pears in the upper lands.

### Pear Blight

Pear blight has been the arch enemy of pear growers in nearly all sections of the state, but of late years this disease seems to have lost much of its virulence. This is particularly true in the Bay regions. It has been determined to the satisfaction of many growers that the Bay climate is not conducive to the spread and development of pear blight and in such sections the blight gives little or no concern to the pear grower. This is the case in that section of Suisun Valley lying next to the marsh lands. Suisun Valley is practically free from pear blight and has been for the last few years. Going up the side valleys and the Sacramento River the blight becomes more serious, equally so in the hot dry interior and the moist river lands where the growth is most vigorous. It would seem from this that climatic conditions enter largely into the development of pear blight, more so than soil or growing conditions. We have never heard of a case of blight on the marsh land islands, and there are several orchards growing there.

### Pruning for the Blight

Branches showing blight should be cut out as soon as observed. Never allow it to remain in the tree till pruning time comes around or spores may be scattered all through the orchard. When small branches are affected it is an easy matter to remove the affected wood by cutting it off several inches below the point where it is visible, never less than six inches unless it is close to a large branch, in which case remove all infected bark and wood. When large branches or the roots are partially affected, the bark and wood should be removed well beyond the affected area. All surfaces thus exposed should be painted over so as to protect the wounds from becoming reinfected with blight or other diseases.

It is important that all pruning tools should be disinfected between cuts as contact with the germs of blight make the tools carriers of the disease. A bottle containing a solution of corrosive sublimate with a sponge tied over the mouth and hung to the ladder is a good arrangement. After each cut wipe the shears or saw on the sponge. A thorough final inspection should be made in the fall to remove any infected parts which might be overlooked.

### Future Planting

The high prices pears have brought during the last few years have caused a considerable area to be planted throughout the state. Much of this is destined to failure due to the fact that blight is a difficult and expensive disease to handle. Many new plantings now show deterioration on account of this feature. This makes the venture a more promising one for the men who understand handling the blight and follow it up religiously.

### WESTERN WALNUT ASSOCIATION

The third annual meeting of the Western Walnut Association will be held at McMinnville, Oregon, November 7-9. In connection with the convention will be featured a display of walnuts, filberts, chestnuts and almonds. The secretary of the association is H. V. Meade, Orenco, Oregon.

# TRACTOR CHISEL

KILLEFER QUALITY

KILLEFER EFFICIENCY

Our Heavy Engine Chisel is made to use with the larger Tractors for extremely deep chiseling and is an excellent tool for preparing the ground for Beans, Beets or other crops. If used before the winter rains, it will open up the ground to a depth of ten to fourteen inches, aerating the soil and allowing the moisture to penetrate below the usual plowpan, which is to be found in almost all of our land.

The frame is of the "A" type, with steel casings and extra large standards. Wheels are twenty-four inches high, with six-inch face. Any style of chisel can be used in place of the "V" blade shown in the cut.

## November Vegetable Planting Calendar

### Northern California

Written for California Cultivator By A. R. Gould

**W**HILE many may have taken every opportunity offered last month to clean up the various plots ready for next season's crop there may be still later bean crops and bean straw to clean up, and much of the ground will be easier to dig after the first rains. The tomato crops will have been collected ere this and the old plants should be removed. Special care must be taken to see that no diseased fruits are left lying on the ground as they will cause trouble another year. These should all be collected and buried deeply with a quantity of quicklime. Keep the hoe busy between the rows of growing crops as the weeds will make great progress if allowed to get a start, especially after the first rains.

#### Broad Beans

These are known here generally as horse beans and are frequently grown by the farmers in the orchards. They are of excellent flavor and may be served up in several different ways. Being easy to grow and the earliest to mature and very hardy they are welcome in the early part of the year. A sowing of the Broad Windsor variety should be made at once. After careful preparation of the soil trenches should be opened up three or four inches deep and the seed sown four to six inches apart. Make the rows or trenches two feet apart and cover in.

#### Asparagus

It will be necessary to give the beds a light forking on the surface and they should be given a coating of farmyard manure. This will serve a double purpose of protecting the crowns and supplying plant food for the coming season.

#### Rhubarb

These beds should be treated as advised for asparagus. Towards the end of the month some of the larger clumps may be dug up and divided for replanting.

#### Radish (Winter Varieties)

Another later sowing of the varieties mentioned last month may be made, and keep the ground well cultivated between the rows of those sown last month.

#### Carrots

To keep up a winter supply of these continue to sow Danvers Half-long and French Shorthorn. Hoe between the lines of those previously sown and dust with soot or wood ashes.

#### Peas

Owing to the absence of very early

rains many will have been held back from sowing this very important crop but those who sow on a small scale could use the sprinkler and would be ahead, but where a large area is sown this is hardly practical. However the most favorable opportunity must be taken advantage of this month, as the varieties we advised last month should be sown.

#### Onions

It will be necessary to have the onion beds thoroughly prepared, deeply trenched with manure as they are gross feeders. Immediately after the first rains make a sowing of the early varieties such as Early Red, White Bermuda and others mentioned last month. The main crop varieties can be sown at the end of this month in December. Good varieties are as follows: Ailsa Craig, Morse Brown Globe, Prizetaker and Yellow Globe Danvers. The latter variety is a heavy cropper and very popular on the market, as also is Prizetaker, while the first named is practically the largest in cultivation. A heavy dressing of wood ashes or soot well raked in the surface of the onion bed will prove very helpful. The seed should be sown in rows about 18 inches apart. It will take half an ounce for a 10 foot row.

#### Lettuce

Thin out and transplant the varieties sown last month and keep the plot free from weeds and slugs.

#### Strawberries

These are generally grown in the vegetable garden and should receive attention this month. New plants have been formed by runners from the parent plant, and these may now be transplanted and other beds formed. They may be planted in rows two feet apart, and in the case of new formed beds lettuce may be grown between the rows. The soil should be of a retentive character and liberal manured. Those who have a garden glass frame may grow a few in flower pots. The most popular varieties grown here are Everbearing, Oregon Improved, Gold Dollar and Malinda.

#### Storing Crops

This month should see a final clearing up of matured root crops such as beets, turnips, carrots, etc., and everything which is sound should be stored away in the cellar to help out the food supply. In our issue of August 4 (Calendar notes) we gave full instructions, and we would urge our readers not to allow anything to stay in the ground to rot. Tomatoes may be canned and even the green ones used.

## Ornamental Planting in November

### Northern California

Written for California Cultivator By A. R. Gould

**I**N this department much activity will commence with the rains and the busy planting season will be at hand.

Already the nurserymen are getting booked up for ornamental trees and shrubs, which means that this is the time to study our garden closely. We may wish to replace subjects which died out or make some additional changes. By mistake some very fine trees may have been planted much too close and these may have to be shifted into an open space to allow of proper development. The writer constantly meets instances of careless planting. Only today we saw Cedrus atlantica, planted eight or ten feet apart, a dozen or more of them, when the proper distance should have been at least 25 to 30 feet apart. The great thing is to start right. After the first rains there will be parts of the garden between shrubs, etc., which will need digging. Gather up all leaves and either stack up to make leaf soil when decayed or dig in the soil where the ground is heavy.

#### Sweet Peas

There are now quite a few winter flowering varieties of sweet peas which our growers have been perfecting for quite a long time. In this section the varieties which have impressed us most are Early Snowflakes, Ear Melody, Early Morning Star, Yarrow Red Orchid and Apricot Orchid. These may be sown at once and should flower in 100 days. Prepare trenches at least two to three feet deep and dig in plenty of manure leaving six inches of pure soil at the top in which to sow the seeds. Soak the seeds about 12 hours before sowing. As soon as the seedlings appear keep a lookout for slugs.

If early flowers of the Standard Spencer types are required sow the following now: Asta Ohn, Barbara Dobbies Cream, Helen Lewis and King White.

#### Early Flowering Gladiolus

Plant the following in well manured soil four or five inches apart: The Bride, Blushing Bride, Ackermann and Peach Blossom. A few of these may also be grown in pots.

There are quite a number of groups of these and practically all are worthy of cultivation. The following varieties may be planted now: English Mont Blanc, Argus and King of Blues; Spanish Iris, King of the Iris, Reconnaissance, British Queen, Cajanus; Mourning Iris, Susiana; man Iris, Isolene, Glory de Hille and Kochii.

The English and Spanish types are best and should be planted in fairly

rich soil six inches apart and three inches deep. The German and Mourning iris are rhizomes and should be planted 12 inches apart.

#### Seeds for Fall Sowing

Several subjects of the hardy annuals may be sown now in the open and will flower early, among which are the following: Lupins, blue, white and pink; collinsia, gilia, nemophila, eschscholtzia, clarkia, all suitable for the wild garden.

## Storage of Potatoes

By Lou D. Sweet, Head of Potato Division, United States Food Administration

IT IS of great importance that all the potatoes raised this year should be stored under proper conditions. Even when every precaution is taken the wastage of potatoes during winter is considerable.

In order that the best methods may be adopted those who have not had experience should know the chief causes of wastage.

Overheating and heating occur if the newly dug potatoes are piled in too high piles so that the air cannot circulate between the tubers. The risk of loss from this cause is greatest in fall immediately after the tubers have been dug, and it is therefore important that potatoes when dug should be put in unnecessarily large piles kept in an ill-ventilated room.

Selection of seed. Seed for next year's planting should be selected from hills that produce all nice, true to type potatoes. These should be selected at the digging time and stored separately in crates or boxes, and by storing them in a well lighted room where the temperature can be held at from 34 to 40 degrees, with a little ventilation and this seed planted next spring, the grower will make a start toward improving the quality of his potatoes instead of as in the past simply planting the culls or runouts.

Selection of seed. Seed for next year's planting should be selected from hills that produce all nice, true to type potatoes. These should be selected at the digging time and stored separately in crates or boxes, and by storing them in a well lighted room where the temperature can be held at from 34 to 40 degrees, with a little ventilation and this seed planted next spring, the grower will make a start toward improving the quality of his potatoes instead of as in the past simply planting the culls or runouts.

There are several diseases of the potatoes which destroy the

tuber, and if diseased tubers are mixed with the sound ones the disease spreads rapidly; therefore it is necessary to sort the potatoes carefully, eliminating all of the disease, the cuts, culls, and dirt before placing them into permanent storage for the winter. All of the cuts, culls, misshapen and diseased tubers should be fed to the poultry and live stock but should be steamed or boiled before being fed, as in this way you increase the food value and destroy the germs of the disease so that it will not get into the manure and thence into the land.

By proper ventilation of the cellar or storage room and by holding the temperature as near 35 degrees Fahrenheit as possible, you keep the potatoes from sprouting.

Selection of seed. Seed for next year's planting should be selected from hills that produce all nice, true to type potatoes. These should be selected at the digging time and stored separately in crates or boxes, and by storing them in a well lighted room where the temperature can be held at from 34 to 40 degrees, with a little ventilation and this seed planted next spring, the grower will make a start toward improving the quality of his potatoes instead of as in the past simply planting the culls or runouts.

## Using Water in Tamping Stump Blasts

Written for California Cultivator By J. R. Mattern

SUCCESSFUL blasters have a trick which often helps to take out a stubborn stump, and makes two sticks of powder do the work of three.

Light, dry ground there is a tendency of the gases of powder to blow the dirt away, or to blow out through the dirt rather than to pull the roots loose from their anchorage. When the crevices of the ground are filled tight with water there is no tendency of this tendency. The gases do seem to get a start through the water; they find it easier to force the stump out.

Recognizing this condition, men do a lot of work make a practice having at least one bucket of water, whenever it is possible to get it without too much trouble, to pour down the hole after about six inches of tamping has been put in and before the rest of the hole is filled up. If

the water stands in the hole to the top no other tamping is needed.

This practice should be followed in all soils that are not soaking wet anyhow at the time of blasting. It should be particularly valuable where the soil is light loam or sand. In fact, it is hard to blow out a stump in sandy soil unless you do wet things up well just before the charge is set off.

You of course must use a fuse that is water proof when making use of this method, and it is well to apply a little soap or tallow round the place where the cap goes into the stick of powder. It is not likely that much water will get down to the powder, but in case it does you are all right if you have prepared for it. When an electric blasting machine is used, with electric fuses, there is less danger of misfire from the cap getting wet, but it still is well to apply the soap or tallow.

## Look Before You Buy a Tractor

Most tractors now on the market are good tractors; the engines are powerful and reliable; they are, as a rule, practical and with intelligent use, entirely satisfactory. That is why they are satisfactory if the purchaser looks carefully to his own particular needs before he bought.

Here's the point; the best, most fully designed, most carefully made tractor in the world would prove an expensive luxury if it did not fit our own particular requirements. For instance, the farm of 1000 acres requires a type of tractor entirely different from that required by the small farm of 80 to 250 acres.

The powerful tractor made to turn great quantities of dirt in plowing great acreages would most certainly not be fitted for the small farm where a light tractor must be used which will do a wide variety of work, where, in order to be profitable, it must cultivate as well as plow, disk, harrow and pull the mower,

binder and wagon as well as fill the silo and do many other belt work jobs.

The small farm tractor in order to be profitable must do enough of the things that horses now do, so you will feel safe in eliminating a large percent of your horses. Therefore, the farmer who "looks before he buys" will look first to his own farm power needs, then look for the tractor which most completely fits those needs.

There are now on the market tractors to "fit" the small as well as the large 1000-acre farm, and no farmer need make the mistake of buying a misfit tractor.

#### STATE BEEKEEPERS

The annual convention of the State Beekeepers is being held at Sacramento this week, November 5-6. This is one of the first meetings to be held north of Tehachapi, the local association being composed almost entirely of Southern California beekeepers.
